James recognizes this when he writes that *the principle of mediate predication or subsumption* is only the axiom of skipped intermediaries applied to a series of successive predications It expresses the fact that any earlier term in the series stands to any later term in the same relation in which it stands to any intermediate term in other words that *whatever has an attribute has all the attributes of that attribute* or more briefly still that *whatever is of a kind is of that kind's kind* Along with the *axiom of mediate equality* equals of equals are equal the rule of mediate predication or subsumption is according to James a special case of the law that skipping intermediary terms leaves relations the same This AXIOM OF SKIPPED INTERMEDIARIES OF OF TRANSFERRED RELATIONS seems to be on the whole the broadest and deepest law of man s thought

JAMES ATTEMPT TO state a law of thought or [illegible]

Both are preceded by his *Prior Analytics* which treats of the syllogism in terms of its purely formal structure and its various forms In the later tradition the distinction between the problems of the *Prior* and the *Posterior Analytics* comes to be represented by the separation between what are called formal and material logic

The formal analysis of reasoning centers on the problem of its cogency Quite apart from any consideration of the truth of its premises or conclusions reasoning is true or false according as it is valid or invalid on purely logical grounds From premises which are in fact false a conclusion which may be either true or false can be truly inferred if the structure of the reasoning is formally valid—that is if the form of the premises stands in a certain logically prescribed relation to the form of the conclusion The logical problem then is to prescribe the formal relationships among propositions which permit valid inference from certain propositions to others without regard to the content of the propo

in the first figure or as predicate in both or a
ubject in both in the second and third figur
respectively Then according to whether th
premises are universal propositions or particul
(All M is P or Some S is M) and each is ei
ther affirmative or negative (All M is P o
Some S is not M) he further distinguish
within each figure a number of valid moods, o
formally correct patterns of inference

For example in no figure can a valid mood b
constructed with two particular or two negativ
premises No conclusion can be drawn from th
two particular statements that some poisons ar
liquids and that some liquids are indispensabl
to life nor can any conclusion be drawn fro
the two negative statements that no triangl
are parallelograms and no rhomboids are pa
lelograms In the first figure the minor premis
can be particular and mu t be affirmative th
major can be negative and must be universal
In figure the following combinations c
— some figures are not rectangular
ectangular figures are parallelo rams,

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passa es referred to For example in 4 HOMER *Iliad* BK II [265 283] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 12

PAGE SECTIONS When the text is printed in one column the letters a and b refer to the upper and lo ver hal es of the page For example in 53 JAMES *Psychology* 116a 119b the passa e begins in the upper half of page 116 and ends in the lower half of page 119 When the text is printed in t o columns the letters a and b refer to the upper and lower halves of the left hand side of the page the letters c and d to the upper and lower halves of the right hand side of the p ge For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lo er half of the left hand side of page 163 and ends in the upper half of the right hand side of pa e 164

AUTHOR S DIVISION One or more of the main divisions of a vork (such as P RT BK CH SECT) are somet mes ncluded in the reference l ne numbers in brackets are given in certain cases *e g Iliad* K II [265 283] 12d

BIBLE REF RENCES The references are to book chapter and verse When the King James and Douay ve sions diffe in title of books or in the numbering of chapte s or verses the Kin James version s c ted first and the Douay indicated by a *(D)* follo vs *e g* OLD TESTAMENT *Nehem ah* 7 45—*(D) II Esd as* 7 46

SYMBOLS The abbreviation esp calls the reader s attention to one or more especially relevant parts of a wh le reference p ssim signifies that the topic is d scussed intermittently rather than continuously in the work or passage cited

For addition l informat on c ncern ng the style of the references see the Explanat on of Reference Style for general guidance in the use of *The G eat Ideas* consult the Preface

Chapter 78 RELATION

INTRODUCTION

LIKE quantity and quality relation is generally recognized as a basic term or category But its meaning like theirs cannot be defined Relation is perhaps the prototype of an indefinable notion As Bertrand Russell points out it seems to be impossible to make any statement of what relation is without using the notion of relation in doing so

Any term which is essentially relative seems also to be incapable of definition Its meaning cannot be stated without referring to its correlative and since the meaning of the latter reciprocally involves the former as *its* correlative each member of a pair of correlative terms draws upon the other for its meaning A part is a part of a whole a whole a whole of parts Similarly the meaning of parent involves the notion of child and the meaning of child the notion of parent

Plato applies this maddening fact about correlative terms to all comparatives which presuppose the correlation of more and less Comparatives such as the hotter and the colder he writes are to be ranked in the class of the infinite They cannot be measured or defined Term like much and little great and small look like quantities but according to Aristotle they are not quantities but relatives for things are not great or small absolutely they are so called rather as the result of an act of comparison

Concerning quantities and qualities the ancients ask how they exist The alternatives seem to be either that they exist in and of themselves, or that they exist as the attributes of substances such as stones and trees But with regard to relations the question seems to be whether they exist rather than how they exist

The supposition that a relation cannot exist apart from the terms it relates may be thought to imply that the relation does exist when the terms it relates exist The ancients however do not appear to regard the relation as something having a reality distinguishable from the reality of the correlative terms It seems to be significant that both Plato and Aristotle discuss relative terms rather than relations as such For the most part they signify relations by using a pair of words which name things standing in a certain relation to one another

Thus in the *Categories* Aristotle refers to double and half master and slave greater and less or knowledge and object known as examples of correlative terms All relatives he says have a correlative Sometimes it is necessary to find the precise word or even to invent the right word for in order to indicate that a given term is relative its correlative must be appropriately named Concubine says Locke is no doubt a relative name as well as wife but in languages where this and like words have not a correlative term there people are not so apt to take them to be so as wanting that evident mark of relations which is between correlatives which seem to explain one another and not to be able to exist but together

When reciprocity of correlation does not appear to exist Aristotle suggests that it may be the result of our failure to use words carefully If we wish to use the term rudder a relative we cannot call its correlative a boat for there are boats which have no rudders Since there is no existing word it would be more accurate Aristotle thinks if we coined some word like ruddered to name the correlative of rudder Similarly in the case of slave as a relative term its correlative is not man understood in any sense but only man understood as master

The things which are designated by a pair of reciprocally relative terms must according to

Aristotle coexist One man cannot be called a master unless another man exists who can be called his slave something cannot be called larger unless something coexistent with it can be called smaller Aristotle considers possible exceptions to this principle of the simultaneity or coexistence of correlatives as for example in the case of knowledge and the knowable It seems possible he thinks for the knowable to exist before anyone has actual knowledge of it But the exception may be due to an improper naming of the correlatives If the correlative of knowledge is the known rather than the knowable then knowledge and its object may be said to be necessarily coexistent for nothing comes to be an object actually known except simultaneously with someone s coming actually to know it

THE COEXISTENCE OF things which are correlative to one another still leaves a question concerning the existence of the relation between them When conceived as an attribute a quality or a quantity can be said to exist in the thing it somehow modifies In the language of Aristotle such accidents *inhere in* substances and accordingly have reality as long as the substances in which they inhere exist But a relation does not seem to inhere in *a* substance It cannot be the attribute of a single thing It somehow lies between two things inhering in neither for if it belonged to either one alone it could have some reality if that one existed and the other did not The question therefore is whether relations really exist at all or are only in the mind of him who compares things or considers them relative to one another

A sign that the relative is least of all a substance and a real thing writes Aristotle is the fact that it alone has no proper generation or destruction or movement as in respect of quantity there is increase and diminution in respect of quality alteration in respect of place locomotion in respect of substance simple generation and destruction In respect to relation there is no proper change for without changing a thing will be now greater and now less or equal if that with which it is compared has changed in quantity

Plotinus also questions the reality of relations Has relation—for example that of right and left double and half—any actuality?

What can be the meaning of correlatives apart from our conception of their juxtaposition? Greater may refer to very different magnitudes different to all sorts of objects The comparison is ours it does not lie in the things themselves In the case of certain space and time relations he maintains that right and left are in our conception nothing of them in the things themselves Before and after are merely two things the relation is a ain of our making

Yet Plotinus seems unwilling to say that we do not mean anything by relation but are victims of words or that none of the relations mentioned can exist Recognizing what he calls the elusive character of relation he is willing to affirm the reality of relations when the actuality of the relationships is derived from no other source than relation itself He thinks that one quantity may be the double of another quite apart from our speech or thought The fact that one quantity is the double of another is an additional fact about the two quantities over and above all their other properties In all the conditions in which we assert relation Plotinus declares the mutual relation exists over and above the objects we perceive it as already existent our knowledge is directed upon a thing there to be known—a clear testimony to the reality of relation

The problem thus seems to become one of distinguishing between relations which have independent reality and those which exist only in the mind Some have said that relation is not a reality but only an idea But this Aquinas declares is plainly seen to be false from the very fact that things themselves have a mutual order and relation Not all relations are real however Relations which result in the things understood from the operation of the intellect alone are logical relations only inasmuch as reason observes them as existing between two understood things For example the relation of a thing to itself is not a real relation for reason by apprehending one thing twice regards it as two and thus it apprehends a certain relation of a thing to itself The same is true of those relations that follow upon an act of reason as genus and species and the like

Aquinas offers in contrast other relations which are realities with regard to both extremes as when a relation exists between two things according to some reality that belongs to both This is clear of all relations consequent upon quantity great and small double and half and the like for there is quantity in both extremes

This distinction between real and logical relations seems to be qualified by the intermediate case of a relation which is partly logical and partly real for according to Aquinas sometimes a relation in one extreme may be a reality while in the other extreme it is only an idea This happens whenever the two extremes are not of one order Since God is outside the whole order of creation and all creatures are ordered to Him and not conversely it is manifest that creatures are really related to God Himself whereas in God there is no real relation to creatures but a relation only in idea inasmuch as creatures are related to Him

In the *Charmides* Socrates raises some doubts about the admissibility of reflexive relations or the relations of things to themselves Others have questioned the partly real and partly logical relation according to which one thing is related to another but the second is not related to the first But the more important issues in the tradition of western thought seem to be whether there are both real and logical relations *i e* relations both in nature and in the mind and whether in either case relations enter into the very nature of the things related or are merely external so that the character of a thing is unaffected by the relations in which it stands

AS INDICATED IN THE chapters on JUDGMENT REASONING and LOGIC relation tends to displace predication in certain typically modern theories of the proposition and of inference What is currently called relational logic is set against subject predicate logic Relations themselves without regard to the character of the terms related become the primary object of logical analysis It is said for example that the proposition John hit James has the form aRb or R(a b) and that the proposition John went to school with James has the form R(a,b c) The first is a dyadic relation the second a triadic relation

Relations are classified not only with respect to the number of the terms they relate but also with respect to such formal properties as symmetry transitivity reflexivity The relation of parent and child for example is asymmetrical It cannot be said if A is the parent of B that B is also the parent of A whereas the relation of brotherhood is symmetrical Statements of symmetrical relationship are convertible If we say that A is the brother of B we can also say that B is the brother of A

The type of relationship remains the same regardless of the character of the terms Unequal quantities are asymmetrically related equal quantities symmetrically to the right of is an asymmetrical spatial relation next to is symmetrical in time simultaneous with is symmetrical and prior to asymmetrical The distinction between transitive and intransitive relations similarly holds for all kinds of terms The relation of father to son or of standing next to in space is intransitive for if A is the father of B and B the father of C A is not the father of C whereas the spatial relation of standing to the right of is transitive for if A is to the right of B and B to the right of C then A is to the right of C

The modern analysis of propositions as relational structures which differ in type according to the character of the relations not the character of the terms has an antecedent in Locke s analysis of judgments as acts of comparison which look to the relation between ideas rather than to the ideas themselves Both analyses lead to a theory of inference which is based on the *convertibility* of symmetrical relations and on the *transitivity* of certain relationships and the intransitivity of others As indicated in the chapter on REASONING the factor of transitivity appears in William James discussion of the principle of mediate comparison He states this in the formula *more than the more is more than the less* Then he explains that such a formula would cover all possible cases as earlier than early is earlier than late worse than bad is worse than good east of east is east of west etc. etc *ad lib tum* Symbolically we might write it as $a<b<c<d$ and say that any number of intermediaries may be ex

punged without obliging us to alter anything in what remains written

James thus formulates what he regards as the most fundamental law of thought For series of homogeneously related terms the law is that *skipping intermediary terms leaves the relations the same* The factor of transitivity enters the picture when James distinguishes between relations which are and relations which are not *transferable* All skipping of intermediaries and transfer of relations occurs within homogeneous series he writes But not all homogeneous series allow of intermediaries being skipped It depends on which series they are on what relations they contain Let it not be said that it is a mere matter of verbal association due to the fact that language sometimes permits us to transfer the *name* of a relation over skipped intermediaries and sometimes does not as where we call men progenitors of their remote as well as of their immediate posterity but refuse to call them fathers thereof There are relations which are *intrinsically* transferable whilst others are not The relation of *condition* e g is intrinsically transferable What conditions a condition conditions what it conditions— cause of cause is cause of effect The relations of negation and *frustration* on the other hand are not transferable what frustrates a frustration does not frustrate what it frustrates No changes in terminology would annul the intimate difference between these two cases

THE FOREGOING PASSAGES from James reflect the general tenor of the theory of the calculus of relations He himself does not systematically expound it Its elaboration is to be found in the writings of Boole Couturat and De Morgan of Jevons Pierce Bradley Royce Russell and Whitehead (whose works are cited in the Additional Readings) Is this relational logic more general than the subject predicate logic that is traditionally called Aristotelian or is the reverse th case?

The modern answer insists upon the greater generality of relational logic Royce for example defining subsumption as a non symmetrical transitive relation which obtains between two classes when one includes the other declares that the entire traditional theory of the syllogism can be expressed as a sort of comment upon and relatively simple application of the transitivity of the subsumption relation. According to Royce William James axiom of skipped intermediaries represents a step in the right direction but it fails to achieve complete generality

Russell disposes of the traditional theory of the proposition in the same fashion that Royce disposes of the traditional theory of the syllogism Traditional logic he writes believed that there was only one form of simple proposition (i e of proposition not stating a relation between two or more other propositions) namely the form which ascribes a predicate to a subject It is therefore unable to admit the reality of relations all relations it maintains must be reduced to properties of the apparently related terms Russell insists on the contrary that propositions stating that two things have a certain relation have a different form from subject predicate propositions. This can be most easily seen he thinks in the case of asymmetrical relations The proposition which states that A and B are related by the symmetrical relation of equality can be interpreted to mean that A and B both possess a common property But when we come to asymmetrical relations such as before and after greater and less etc the attempt to reduce them to properties becomes in Russell s opinion obviously impossible The relational theory of the proposition therefore includes the subject predicate theory as a special case

A defense of the subject predicate logic would not make the counterclaim that relational logic can be treated as a special case Rather it would insist that the two logics are radically different in principle—that the one belongs to a philosophy of nature and a metaphysics in which substance is the primary concept whereas the other belongs to the empirical sciences and to modern mathematics in which the concept of relation supplants substance Whichever side of the controversy is taken the undeniable difference between a relational and a subject predicate logic represents one of the great differences between modern and ancient thought

It is not only in logic that the modern emphasis seems to be upon relations rather than

upon things related—on relations denuded of their terms rather than on terms treated as correlatives The same tendency appears in modern mathematics in algebra in the cal culus and especially in the theory of equations and functions of sets and series It also appears in modern physics where according to Cassirer the great conceptual revolution consists in dis placing substance by function and the casual interaction of substances by functional rela tionships and systems of order Such substitu tions obviously parallel the shift in logic—from the consideration of terms related as subjects and predicates to the consideration of rela tions without regard to differences in the terms related

In the tradition of the great books this con ceptual revolution seems to be announced by the treatment which Hume and Kant accord to the notion of substance Hume appears to conceive of experience as a series of events related as he says by only three principles of connexion namely *Resemblance Contiguity* in time or place, and *Cause or Effect* These relations make up the fabric of experience So long as it consisted in such connections our experience would be the same whether or not there were enduring things or substances

Nature has established connexions among particular ideas Hume writes so that no sooner does one idea occur to our thoughts than it introduces its correlative All our knowl edge of matters of fact depends upon the asso ciation of ideas or the relations of resemblance contiguity and causation among the elements of experience All other knowledge has for its object those relations between ideas which do not connect them causally or place them in a spatial or temporal order In either case rela tions of all sorts rather than things and their properties (or substances and their attr butes) seem to be the prime constituents of nature and of knowledge

Kant presents a fourfold classification of judgments according to their quantity quality relation and modality Under the head of rela tion he distinguishes the categorical the hypothet cal and the disjunctive according to the following criteria *a* Relation of the pred icate to the subject *b* Relat on of the cause to its effect *c* Relat on of subdivided knowledge and of the collected members of the subdivision to each other These are he writes all the relations of thought in judgements

Pointing out that he borrows the term from Aristotle Kant calls the pure concepts of the understanding categories and constructs a table of categories which runs parallel to his table of judgments because as he explains the same function which imparts unity to various representations in one judgement im parts unity likewise to the mere synthesis of various representations in one intuition which in a general way may be called the pure con cept of understanding Kant s categories in contrast to Aristotle s afford a striking example of the shift from substance to relation

Where for Aristotle substance is the primary category and all other categori s signify the accidents of substance among which relation seems to have least reality in the nature of things Kant makes relation one of the four major groups of categories and under relation places subsistence and inherence (or substance and accident) along with causality and depend ence (or cause and effect) and community (or reciprocity between the active and the passive) It is not substance but the relation of substance and accident which is for Kant a transcen dental category

THE ISSUE CONCERNING substance and relation takes another form in the problem whether relations exist *in* the very nature of things as belonging to their essence or only exist as connections *between* things In the latter al ternative there is still the question whether relations between things are externally affixed to them or are internally inherent in them and affect the natures of the things related

Accord ng to the Christian doctrine of the Trinity there are real relations *in* God each really distinct from the others yet each iden tical with the divine essence These relations are the persons of the Trinity—the relations Aquinas calls paternity filiation spiration and procession the relation of the Father and the Son and of the Holy Sp rit to tl em both Relation in God he writes is not s an acc dent in a subject but s the div ne sence itself and so t is sub t nt for the d vine essence is sub stent Th fore a the Godhead

is God so the divine paternity is God the Father Who is a divine person Therefore a divine person signifies a relation as subsisting

Since the three persons of the Trinity are of the same essence the principle of their real distinction must be found elsewhere Denying that there can be discerned between them a real distinction in respect of the divine essence Descartes does not reject the possibility of a distinction in respect of their relation to one another Aquinas considers two principles of difference among the divine persons *origin* and *relation* but thinks it is better to say that the persons or hypostases are distinguished by relations rather than by origin for among other reasons when a relation is an accident it presupposes the distinction of subjects but when the relation is subsistent it does not presuppose but brings about distinction

It would seem to follow that except in God relations are not subsistent In Aristotle s theory of corporeal substances for example the matter and the form which constitute a physical thing are united not related Though matter and form are conceived as really distinct principles in the composition of a composite substance—as essence and existence are also sometimes said to be really distinct principles in the being of all things except God—their real distinction does not imply that they are subsistent as are the persons of the Trinity nor that they are relations or in relation to one another If real as opposed to logical relations occur only between things which somehow really subsist then those principles which must be united in order for a thing to subsist cannot be really related to one another

WITH A SOMEWHAT different analysis Locke seems to exclude relations from the constitution of what he calls the complex idea of substance All complex ideas according to Locke are either modes substances or relations The complex idea of substance is a collection of those several simple ideas of sensible qualities which we find united in the thing called horse or stone yet because we cannot conceive how they should subsist alone nor one in another we suppose them existing in and supported by some common subject which support we denote by the name substance though it be certain we have no clear or distinct idea of that thing we suppose a support

The various simple ideas of qualities which together with the indistinct notion of a supporting substratum constitute the complex idea of a particular substance are in Locke s theory compounded not related Relation is itself a complex idea consisting in the consideration and comparing of one idea with another The ideas related may be either simple or complex but the relations are *between* ideas not *in* them—certainly not in simple ideas nor in complex ideas of modes and substances which are combinations not relations of simple ideas

The exception is of course a complex idea of relation which involves several distinct ideas and in addition the idea of a relation between them which Locke says it gets from their comparison one with another Since any idea whether simple or complex may be the occasion why the mind thus brings two things together any of our ideas may be the foundation of relation but Locke adds there must always be in relation two ideas or things either in themselves really separate or considered as distinct and then ground or occasion for their comparison

Locke s theory of relations not only seems to exclude them from the interior constitution of substances but also seems to make them entirely extrinsic to the natures of the things related Ideas of relation Locke says may be the same in men who have far different ideas of the things that are related or that are thus compared The relation is unaffected by the things it relates as they in turn are unaffected by it for they are not contained in the real existence of things but [are] something extraneous and super induced

Berkeley and Hume also seem to agree that relations are entirely external *Relations* are distinct from the ideas or things related writes Berkeley inasmuch as the latter may be perceived by us without our perceiving the former To Hume all events seem entirely loose and separate One event follows another but we can never observe any tie between them They seem *conjoined* but never connected So far as our understanding goes nothing in the nature of one event necessarily

leads the mind to the consideration of another as it would if the event could not be under stood by us except as intrinsically related or connected with that other

In the tradition of western thought the issue concerning the internality or externality of relations has profound implications for man s conception of the order of nature or the struc ture of the world The difference discussed in the chapter on CHANCE between what William James calls the block and the con catenated universe presupposes not only dif ferent views of causality but also different positions with respect to the internality or ex ternality of relations as is indicated by James criticism of Hegel and Bradley

The relation of part and whole and of one part to another in the structure of an organic whole seems to be the prime example of in ternal relationship Each part is thought to be constituted both in its being and nature by the being and nature of the whole to which it belongs and by the other parts which comprise that whole This may be seen in Spinoza s theory of God or Nature as the one and only substance in and through which everything else both is and is conceived All things are locked together in a system of internal relation ships—the finite parts with one another through the infinite whole which determines each to be what it is in itself and in relation to all others

RELATION SEEMS TO BE the principle of order At least it can be sa d that the various concep tions of order which appear in the great books involve the idea of relation and of different kinds of relationship

The order of the universe or of nature for example seems to be differently conceived according as things are causally related to one another related as lower and h gher species in a hierarchy of grades of being or as the parts of one all emb acing whole In each case it makes a difference as we have already ob served whether the relations involved are thought to be real or logical and internal or external to the th ngs r lated

Relation sim larly ente s into conceptions of psychological political and moral ord r—the order of the parts of th soul the order of classes or funct ons in the state th order of goods of means and ends of duties of loves Just as the status of each thing in nature is affected by whether the universe is conceived as a whole of internally related parts or as a set of externally related wholes so the status of the individual in society is affected by whether the state is conceived as an organic whole or merely as a political order formed by the free association of individuals

The consideration of the various types of order occurs in other chapters such as NATURE WORLD SOUL STATE GOOD AND EVIL and BEAUTY Particular types of relationship are also discussed in chapters concerned with the terms between which such relationships hold—the relation of cause and effect in the chapter on CAUSE spatial and temporal relationships in the chapters on SPACE and TIME the rela tion of species and genus in the chapters on EVOLUTION and IDEA relations of equality and inequality in the chapter on QUANTITY and re lations of similarity and dissimilarity in the chapter on QUALITY

This last type of relationship more broadly conceived as including not merely likeness in quality but the sameness or similitude of things in every sort of respect is the main con sideration of the chapter on SAME AND OTHER The theory of analogy is d scussed there also for though it is concerned with relation—a pro portion being a ratio of ratios—the specific relationship by which relations are themselves related in analogies or proportions seems to be one of similitude (either identity or similarity)

Finally the idea of relation seems to be in volved in the contrast between the absolute and the relative Things are said to be con sidered absolutely when they are cons dered in themselves and relatively when they are con sidered with reference to something else By extension of these meanings relativ sm tends to assert that with regard to most things if not all wh t they are depends on the point of v e v i e their relation to man to *this* group of men or even to *this* man Absolutism goes to the opposite extreme of saying that things are what they are independently of man s v w of them The oppos t on of these two tenden s cre tes familiar ues concern ng the true the good and the beaut ful wh ch ar discussed in the chapters d vot d to tho ubjects

OUTLINE OF TOPICS

1 The general theory of relation

1a The nature and being of relations the distinction between real and logical or ideal relations

1b The effect of relations on the nature and being of things internal and external relations

1c The coexistence of correlatives

1d Relational unity or identity of relation the notion and use of analogy or proportionality

2 Order and relation in God the divine processions and the relations constituting the Trinity of persons

3 The relation of God to the world divine immanence and transcendence

4 Relation in the order of thought or knowledge

4a The definability or indefinability of relative terms

4b The proposition or judgment as a statement of relation relation in reasoning

4c The transcendental categories of relation

4d Relations as objects of knowledge ideas of relation

4e The relations between ideas

4f The types of relationship underlying the association of ideas in thought memory and dreams

5 Order as a system of relationships or related things

5a The nature and types of order inclusion and exclusion succession and coexistence priority posteriority and simultaneity

(1) The order of the causes or of cause and effect

(2) The order of goods or of means and ends the order of loves

(3) The order of quantities the types of proportion

(4) The order of kinds hierarchy species and genus

5b The order of the universe or of nature the hierarchy of beings

5c Order as a principle of beauty

6 The absolute and the relative modes of consideration

6a Absolute and relative with respect to space time motion

6b Absolute and relative with respect to truth

6c Absolute and relative with respect to goodness or beauty

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbe s of the passages referred to For example in **4** HOMER *Il ad* BK II [265 283] **12d** the number **4** is the number of the volume in the set the number **12d** indicates that the pas sage is in section d of page 12

PAGE SECTIONS When the text is printed in one column the letters a and b efer to the uppe nd lo ver halves of the p ge For example in **53** JAMES *Psych l gy* **116a 119b** the pa sage begins in the upper half of page 116 and ends in the lower half of page 119 When the text is printed in two col mns the l tters a and b refer to the upper and lower halves of the left hand s de of the page the letters c and d to the upp and lo ver halves of the right hand s de of the page For exampl in **7** PLATO *Sympos um* **163b 164c** the passage b gins in th lower half of the left hand s de of page 163 and ends in the upper half of the r ght hand de of page 164

AUTHOR S DIVISIONS One or more of the main d isions of work (such as PART K CH SECT) are sometimes included in the reference line numbe s in brackets are g ven in c r tain cases *e g Il ad* BK II [65 83] **12d**

BI E R FERENC The ref rences are to book chapter and verse When the Ki g James and Douay vers ns differ in title of books or in th numbering of chapters or vers s the King James version cited fir t and the Douay indicated by a (*D*) f llo s *e g* OLD T STA MENT *Neh miah* 7 45—(*D*) *II Esd as* 7 46

Chapter 79 RELIGION

INTRODUCTION

ARGUMENT is unprofitable—worse than that unintelligible—when opponents do not share some common ground Between the complete skeptic who denies reason s competence and the philosopher or scientist who appeals to it no common ground exists Between the man who obeys the rule not to contradict himself and the man who finds nothing repugnant in answering Yes and No to the same question there can be no argument There is an issue between them but the position each takes reduces the other to silence

Lack of a common measure for judging opposed views tends to render them incommunicable to one another For men to be in this plight is the exception in science and philosophy but it seems to be the typical situation where the basic issues of religion are concerned Of all subjects the most controversial religious issues seem to be the least capable of being settled by controversy No divis ons among men—certainly not those which separate philosophers or scientists—are as unbridgeable as the chasm between the faithful and those they call infidels bet een Jew and gentile or Christian and pagan Faith and lack of faith or the diversity of faiths seem to render certain questions as imponderable as they are weighty

On the definition of religion itself the deepest issue lies between those who conceive it as having a supernatural foundation in God s revelation and authority and those who think of religion as ha ing a purely natural origin in certain human tendencies which makes it no different from philosophy and science as an element of culture But religion can be supernatural only for those whose faith decla es it to be so Those who deny that it is supernatural may offer many reasons for thinking so and try in many ways to explain away faith What they all come to is that it is an illusion to suppose faith is God s gift rather than man s own will to believe To the man of faith this only means that his critic lacks the gift of faith or e n the wish to have it

Many consequences follow from this unarguable difference concerning the meanin of religion Religion to the man of faith usually means much more than the acceptance of a creed It means acts of piety and worship recourse to prayer the partaking of sacraments the observance of certain rituals the performance of sacrifices and purifications It mea s rendering to God what is His due obeying His commandments beseeching and gaining the help of His grace whereby to lead a life which shall seem worthy to Him When religion is conce e as nothing more than a set of beliefs which men have adopted it is restricted to one part of life It may or may not involve action as well as thought but it is not the fabric of a whole l fe It does not qualify every other part of it It does not demand that inner devotion and external conduct constitute the practice of a man s belief if he is to avoid hypocrisy

ACCORDING TO THIS difference in the concep tion of relig on as supernatural or natural we seem to hold incommunicably diff rent view of religious belief of revelation miracles and prophecies But those who agree that r ligion is not man made that it requires in some form divine authority and inspiration do not all have the same faith worship in the same way or conform to the same rites The issue there fore between men of different faiths—men who live according to the rules of different religious communities—is almost as difficult as that between the religious and the irreligious.

In the western tradition the plurality of religions necessarily raises a question of truth and falsity for any religionist hose faith exclu

the possibility of several equally true religions Idolatrous and superstitious heretical and chismatic are epithets which draw their special significance from controversies about religion and religions The word pagan as Gibbon points out comes to mean idolatry or the worship of false gods The Latin Christians he says bestowed it on their mortal enemies the Mahometans The Mohammedans in turn held the view according to Gibbon that all except themselves deserved the reproach of idolatry and polytheism The charges of idolatry and superstition occur also in the conflict between Jew and Christian between Protestant and Catholic countered often by charges of infidelity or heresy and schism

Quite apart from the general problem of church and state with its issues of political toleration and freedom of worship the very meaning of religion raises the question of tolerance in its most acute form It is not a question of political rights and liberties but of being right or wrong in one s religious beliefs and acts To the extent that the communicants of one religion regard themselves as believing what God has revealed to them and to the extent that they hold their religious practices to be prescribed by divine law they are not free in conscience it seems to entertain contrary beliefs and practices as conceivably true alternatives

The conflict between men of diverse faiths alike in their understanding of faith as divinely inspired somehow appeals beyond any human decision to God himself for judgment The controversy between men of any religious faith and those who treat such faith as a purely human prejudice seems to be even less susceptible of resolution by the ordinary processes of discourse

IF THESE OBSERVATIONS are accurate and just the materials of this chapter cannot be assembled dialectically—either as opposed views or as belonging together—simply by reference to the content of the various opinions which can be found in the great books In this chapter as in no others except perhaps those which treat of matters connected with religion—such as GOD IMMORTALITY SIN and THEOLOGY—it seems necessary to pay some attention to the opinion author as well as to the opinion and even in some cases to the community or culture in which the opinion arises It is not as necessary for example to know whether the man who writes about virtue is himself virtuous as it is to know whether the man who writes about religion is religious and to know furthermore in what sense he conceives himself as being religious and what religion he espouses

The distinction between sacred and profane and between religious and secular applies to books as well as to other things In the tradition of the great books only one book is set apart as sacred None of the writers included in this set regard the Koran as sacred scripture though Gibbon as an historian reports the Mohammedan belief in the Koran Mohammedans believe that the Koran is the word of God revealed to His one and only prophet as Jews believe that the Old Testament is divinely inspired writing and Christians believe in both Testaments as Holy Writ

But though the Bible is *the* traditionally sacred book of the west it is not read as such by all who write about it The historian or the philosopher who is not himself a religious Jew or Christian may acknowledge the belief of others without sharing it He reads the Bible as a collection of human writings which have exercised an unparalleled influence upon western culture Whatever the merit of these writings as wisdom history preachment or poetry they do not command a special kind of reading unless they are distinguished from all others by being the word of God not man Controversies over interpretations of the Bible may thus begin with each side begging the main question in issue Is the Bible sacred scripture or is it no different in kind from the poetry of Homer and the sayings of the Greek wise men?

The two ways of reading the Bible are incommensurable If the Bible is not sacred a critical reading may be expected to disclose inconsistencies in it and many of the things it says may be questioned in fact or in principle But if though humanly recorded it is the repository of divine revelation then it has an authority which puts it above questioning though not beyond the need for interpretation

There is one sort of proposition says Locke which challenges the highest degree of our assent upon bare testimony whether the thing

proposed agree or disagree with common experience and the ordinary course of things or no The reason whereof is because the testimony is of such a one as cannot deceive nor be deceived and that is of God himself This carries with it an assurance beyond doubt evidence beyond exception This is called by a peculiar name revelation and our assent to it faith which as absolutely determines our minds and as perfectly excludes all wavering as our knowledge itself and we may as well doubt of our own being as we can whether any revelation from God be true So that faith is a settled and sure principle of assent and assurance and leaves no manner of room for doubt or hesitation Only we must be sure that it be a divine revelation and that we understand it right

Locke seems to be putting two qualifications upon his remark that the bare testimony of revelation is the highest certainty The first concerns our assurance that we are not mistaken in accepting something as revealed The second concerns the correctness of our understanding of that which we take to be God s word

On the first point Hobbes though he says that faith is a gift of God which man can neither give nor take away by promises of rewards or menaces of torture also says that faith depends only upon certainty or probability of arguments drawn from reason or from something men believe already Faith does not come by supernatural inspiration or infusion but according to Hobbes by education discipline correction and other natural ways by which God worketh them in his elect at such time as he thinketh fit The object of faith is not God but the men whom God has appointed to instruct us belief which Hobbes distinguishes from faith goes beyond faith to the acceptance as true of what they say Consequently Hobbes writes when we believe that the Scriptures are the word of God having no immediate revelation from God himself our belief faith and trust is in the Church whose word we take and acquiesce therein

On this same point Aquinas gives a different answer He distinguishes between the material and the formal aspects of the object of faith As in the object of science so in the object of faith there is that which is known and is the material object so to speak and that whereby it is known which is the formal aspect of the object Thus in the science of geometry the conclusions are what is known materially while the formal aspect of the science consists in the means of demonstration through which the conclusions are known Accordingly if in faith we consider the formal aspect of the object it is nothing else than the First Truth For the faith of which we are speaking does not assent to anything except because it is revealed by God The articles of religious faith may be drawn from the content of Holy Writ but that Holy Writ is the revealed truth of God must first be accepted by an act of faith Aquinas seems to be meeting Locke s point by saying that it is faith itself which makes us sure that the propositions to which we assent by faith are the matter of divine revelation

On Locke s other point concerning the rightness of our interpretation of Scripture Locke himself remarks that though everything said in the text be infallibly true yet the reader may be nay cannot choose but be very fallible in the understanding of it Nor is to be wondered that the will of God when clothed in words should be liable to that doubt and uncertainty which unavoidably attends that sort of conveyance From which he concludes that since the precepts of natural religion are plain and very intelligible to all mankind and seldom come to be controverted and other revealed truths which are conveyed to us by books and languages are liable to the common and natural obscurities incident to words, methinks it would become us to be more careful and diligent in observing the former and less magisterial positive and imperious in imposing our own ideas and interpretations of the latter

That Scripture is difficult to interpret and subject to various interpretations Augustine also acknowledges but he differs somewhat from Locke concerning the task or duty which that fact imposes upon the religious man. Let no one then go on bothering me " Augustine writes with such words as Moses did not mean what you say he meant what I say If he said to me How do you know that Moses meant by these words what you say? —I should

take the question with complete calmness But when he says He did not mean what you say he meant what I say yet does not deny that what each of us says is true then O Life of the poor O my God in whose bosom is no con tradiction rain down the gift of moderation upon my heart that I may hear such talk with patience For what they say they say not be cause they are godly men and have seen it in the mind of Your servant Moses but because they are proud men it is not that they know the opinion of Moses but that they love their own opinion and this not because it is true but because it is their own

Confronted by a variety of interpretations each of which may be true Augustine remarks how foolish it is in such a flood of true mean ings rashly to assert that Moses intended one or the other of them If I had been Mo ses if I had been the same as he and You had given me the book of Genesis to write I should have wished that You would grant me such skill in writing such an art for the construction of what I had to say that not even those who can not yet grasp how God creates would reject my words as too much for their strength and again that those who can grasp so much would find fully contained in the few words of Your serv ant whatever truths they had arrived at in their own thinking Those who thirst for truth and not for vanity honor the human dis pensers of God s revelation Augustine thinks by believing that when under God s inspira tion they wrote these words they had in mind whatever is most excellent in them by the illu mination of truth and their fruitfulness for our profit

Thus when one man says to me Moses meant what I think and another Not at all he meant what I think it seems to me Augus tine declares that the truly rel gious thing is to say Why should he not have meant both if both are true and if in the same words some should see a third and a fourth meaning and any other number of true meanings why should we not believe that Moses saw them all since by him one God tempered Sacred Scripture to the minds of many who should see truths in it yet not all the same truths

Augustin s position combines belief in the truth of Scripture which is a consequence of the faith that it is God s word with latitude of interpretation in determining what that truth is appealing here to the ordinary standards of what seems to be true to the thinking mind In the course of commenting on Augustine s own interpretation of certain passages in Genesis Aquinas summarizes what he takes to be Augus tine s two rules The first is to hold the truth of Scripture without wavering The second is that since Holy Scripture can be explained in a multiplicity of senses one should adhere to a particular explanation only in such measure as to be ready to abandon it if it be proved with certainty to be false lest Holy Scripture be exposed to the ridicule of unbelievers and ob stacles be placed to their believing

As THE QUESTION whether the Bible is sacred writing affects the way it is to be read so the distinction between religious and secular writ ing seems relevant to what the great books have to say about religion

In the pagan tradition for example Herod otus in his *History* reports and discusses a great variety of religious doctrines and prac tices as characteristic of the peoples he visits or inquires about There seems to be no indication that Herodotus is judging the truth or falsity of these various religions either by reference to their reasonableness or from convictions born of his own adherence to one of these relig ons as against all the rest For the most part he is writing *about* religion rather than *religiously* with the possible exception of those passages in which he expresses his own views discussed in the chapter on PROPHECY on the oracles omens and portents which reveal the will of the gods

In contrast the tragedies of Aeschylus espe cially the Oresteian trilogy are religious poet ry comparable to Dante s *D vine Comedy* and Milton s *Parad se Lost* These are not books *about* religion as in a sense the great poem of Lucretius *On the Nature of Th ngs* is about reli gion—a passionate attack on religion by a man who is not religious It may be thought that the aim of Lucretius is to purify rel gion when he wishes to banish all bel ef in things degrading to the gods and inconsist nt with th peace so that men can approach th san tuaries of the gods with calm breast and w th tran qu l pea e of m nd But even a pe son who

er be able to carry us beyond the usual course of experience or give us measures of conduct and behavior different from those which are furnished by reflections on common life

Those who like Marx and Freud regard religion as a social imposture or the response to a neurotic need not only impute falsity or worse to the traditional religions of the west they also tend to reject natural religion Science is enough—for truth s sake for the conduct of life for society s welfare Yet in commenting on the following lines from Goethe

> He who has Science and has Art
> Religion too has he
> Who has not Science has no Art
> Let him religious be!

Freud says that on the one hand these words contrast religion with the two highest achievements of man and on the other they declare that in respect of their value in life they can represent or replace each other In these terms Freud thinks the religion of the ordinary man is justified— the only religion that ought to bear the name If a man does not have science or art to live by he must have religion for life as we find it is too hard for us and we cannot do without palliative remedies

It is the religion of the philosophers and the theologians which Freud questions He criticizes the philosophers for trying to preserve the God of religion by substituting for him an impersonal shadowy abstract principle and he challenges the grounds on which he thinks the theologians hold it to be an impertinence on the part of science to take religion as a subject for its investigations They deny that science has any competence whatsoever to sit in judgment on religion If we are not deterred by this brusque dismissal Freud declares but inquire on what grounds religion bases its claim to an exceptional position among human concern the answer we receive if indeed we are honored with an answer at all is that religion cannot be measured by human standard since it is of divine origin and has been revealed to us by a spirit which the human mind can not grasp It might surely be thought he continues that nothing could be more easily refuted than this argument it is an obvious *petitio principii* a begging of the question The point which is being called in question whether there is a divine spirit and a revelation and it surely cannot be a conclusive reply to say that the question cannot be asked because the Deity cannot be called in question.

Marx takes a similar view of the theologians. According to him the theologians beg the question in much the same way as do the classical economists for whom there are only two kinds of institutions those of art and those of nature Feudal institutions are artificial institutions, those of the bourgeoisie are natural institutions. In this Marx says they resemble the theologians who establish two kinds of religion. Every religion but their own is an invention of men, while their own religion is an emanation from God

Plato on the other hand excoriates those who think that all religion is a cooking up of words and a make believe It is almost as if he had Marx and Freud in mind when in the *Laws* the Athenian Stranger carries on the discussion of religion in terms of the distinction between nature and art and refers to those who would say that the Gods exist not by nature but by art and by the laws of states which are different in different places according to the agreement of those who make them. They are the very same people who hold that the honorable is one thing by nature and another by law and that the principles of justice have no existence at all by nature

In Plato s view the justice of the state and its laws must be founded not only on nature rather than art but also upon religion and a right belief in the gods The Athenian Stranger answers those who think it is dreadful that [we] should legislate on the supposition that there are Gods by saying why it is a matter of no small consequence to prove that there are Gods and that they are good and regard justice more than men do The reason he gives is that no one who in obedience to the laws believed that there were Gods ever intentionally did any unholy act or uttered an unlawful word but those who did must have supposed one of three things—either that [the Gods] did not exist which is the first possibility or secondly that if they did they took no care of man or third that they were easily appeased and turned aside

from their purpose by sacrifices and prayers That is why the demonstration of the existence of the gods would be the best and noblest prelude of all our laws

Rousseau s legislator like Plato s is also concerned with the role which religion plays in the foundation and life of the state But the question Which religion? arises at once for Rousseau as it does not for Plato who can treat the nature of the gods and the nature of the state as equally within the province of the political philosopher But for Rousseau living in a Christian civilization the political philosopher can not approach the subject of religion without being confronted by the theologian He finds it necessary therefore to distinguish between a revealed religion like Christianity and the natural or civil religion of the citizen

Christianity says Rousseau not the Christianity of today but that of the Gospel which is entirely different is the religion of man not of the citizen So far from binding the hearts of the citizens to the State it has the effect of taking them away from all earthly things I know of nothing more contrary to the social spirit We are told that a people of true Christians would form the most perfect society imaginable I see in this supposition only one great difficulty that a society of true Christians would not be a society of men The country of the Christian is not of this world

What the state needs Rousseau goes on to say is a purely civil profession of faith of which the Sovereign should fix the articles not exactly as religious dogmas but as social sentiments without which a man cannot be a good citizen or a faithful subject He then enumerates what he calls the dogmas of civil religion which ought to be few simple exactly worded without explanation or *commentary* such as the existence of a mighty intelligent and beneficent Divinity possessed of foresight and providence the life to come the happiness of the just the punishment of the wicked the sanctity of the social contract and the laws

Montesquieu takes the diametrically opposite view With regard to the true religion he writes I have never pretended to make its interests submit to those of a political nature but rather to unite them The Christian religion which ordains that men should love each other would without doubt have every nation blessed with the best civil the best political laws because these next to this religion are the greatest good that men can give and receive Montesquieu meets the argument that true Christians cannot form a government of any duration by saying that the more men believe themselves indebted to religion the more they would think due to their country The principles of Christianity deeply engraved on the heart would be infinitely more powerful than the false honor of monarchies than the human virtues of republics or the servile fear of despotic states

ANY CONSIDERATION OF the political significance of religion tends to lead into the controversy over the relation between church and state Three main positions seem to be taken one which calls for the integration of church and state one which calls for a subordination of either state to church or church to state and one which insists upon the autonomy of each as a basis for their relation to one another or carries separation even further to the point of complete divorce

The theocratic state of the Old Testament represents the Jewish version of the first position distinguished by the fact that the priesthood was in the service of the king Hobbes defines a Christian commonwealth in almost parallel terms It is indifferent whether it is called a church or a state because it is a company of men professing Christian religion united in the person of one sovereign It follows Hobbes argues that there is on earth no such universal church as all Christians are bound to obey because there is no power on earth to which all other commonwealths are subject *There are Christians in the dominions of several* princes and states but every one of them is subject to that commonwealth whereof he is himself a member and consequently cannot be subject to the commands of any other person And therefore a church such a one as is able to command to judge absolve condemn or do any other act is the same thing with a civil commonwealth consisting of Christian men and is called a *civil state* for that the subjects of it are *men* and a *church* for that the subjects thereof are *Christians*

According to Hobbes *temporal* and *spiritual* government are but two words brought into the world to make men see double and mistake their lawful *Sovereign* There is therefore no other government in this life neither of state nor religion but temporal Agreeing with Hobbes on the unity of government and the integration of church and state writers like Augustine and Roger Bacon place kings in the service of the priesthood and make the supreme pontiff who governs both spiritually and temporally the only earthly sovereign Gilson summarizes their view by saying that for them the definition of the Church includes the State and that the church has a universality which embraces the temporal and the spiritual domains alike

The position of Aquinas is indicated in the Treatise on Law in the passage in which he declares that no civil law can be valid or binding if what it commands is contrary to divine law It is more explicitly developed in his little tract *On the Governance of Rulers* It is not the ultimate end he writes of an assembled multitude to live virtuously but through virtuous living to attain to the possession of God Furthermore if it could attain this end by the power of human nature then the duty of a king would have to include the direction of men to this end But Aquinas holds men attain this end by divine not human power and therefore divine not human government is needed to direct men to their end Consequently he maintains in order that spiritual things might be distinguished from earthly things the ministry of this kingdom has been entrusted not to earthly kings but to priests and in the highest degree to the chief priest the successor of St Peter the Vicar of Christ the Roman Pontiff to whom all the kings of Christian peoples are to be subject as to our Lord Jesus Christ Himself For those to whom pertains the care of intermediate ends should be subject to him to whom pertains the care of the ultimate end and be directed by his rule

This last statement indicates that Aquinas unlike Augustine and Roger Bacon assigns to the state a subsidiary dominion and to the king a subordinate jurisdiction The opponent of Aquinas is usually thought to be Marsilius of Padua whose *Defensor Pacis* separates church and state but subordinates priest to king in a manner which corresponds to the Averroistic subordination of theology to philosophy Agreeing with both that church and state are distinct Dante agrees with neither on the relation which should obtain between the temporal and the spiritual domains or between civil and ecclesiastical government

Whereas Aquinas holds that only man s spiritual end is ultimate and that all temporal ends are intermediate Dante insists that man has two ultimate goals Man exists for a double purpose he says in *De Monarchia* Since he alone among beings partakes of both corruptibility and incorruptibility he alone among beings belongs in two final orders—one of which is his goal as a corruptible being the other as incorruptible Man has two beatitudes or two forms of happiness—an earthly perfection which consists in the complete realization throughout time of the intellectual powers of mankind and a heavenly perfection which consists in the vision of God These two states of bliss Dante argues like two different goals man must reach by different ways For we come to the first as we follow the philosophical teachings applying them to our moral and intellectual capacities and we come to the second as we follow the spiritual teachings which transcend human reason according to our theological capacities faith hope and charity

In terms of this theory of man s two ends and of the distinct spheres of reason and faith or philosophy and civil law on the one hand and religion and divine law on the other Dante formulates his doctrine of the autonomy of state and church The reins of man he writes are held by a double driver according to man s two fold end one is the supreme pontiff who guides mankind with revelations to life eternal and the other is the emperor who guides mankind with philosophical instructions to temporal happiness Church and state may be related as sun and moon in the sense that the state receives some illumination from the church even about matters within its own jurisdiction but according to Dante the state has its own source of light in reason Temporal power he maintains receives from spiritual power neither its being nor its power or authority nor even its functioning strictly

speaking but what it receives is the light of grace which God in heaven and the pope s blessing on earth cause to shine on it in order that it may work more effectively

All these mediaeval theories of what should be the relation between church and state—with the exception perhaps of the doctrine of Marsilius of Padua—conceive religion as having a supernatural source and the church as having a supernatural foundation both being instituted for the sake of guiding man to his supernatural end They differ from one another according to the view they take of man s earthly or temporal goods the power of his reason and the jurisdiction of his laws Their difference according to Gilson verifies the principle that the manner in which one conceives the relationship of the State to the Church that in which one conceives the relationship of philosophy to theology and in which one conceives the relationship of nature to grace are necessarily correlated

These mediaeval theories of church and state persist with certain modifications in modern times But the characteristically modern view of the matter begins with a different view of reli on itself. Its mediaeval prototype is to be found in the rationalism of Marsilius Within the secular state the chur h is a purely human institution religion is defended by philosophy for the contribution it makes to the peace of the civil community—or perhaps condemned by the apostles of earthly progre s as the opiate of the masses The principle of religious tolerance involves not merely tolerance of religion but tolerance for a diversity of religions and often the complete rejection of all religion

I esteem it above all things necessary writes Locke in his *Letter Concerning Toleration* to distinguish exactly the business of civil government from that of relig on and to settle the just bounds that lie between the one and the other The commonwealth Locke continues seems to me to be a society of men constituted only for the procuring preserving and advancing their own civil interests A church is a voluntary society of men joining themselves together of their own accord in order to the public worshipping of God in such manner as they judge acceptable to Him and effectual to the salvation of their souls

Locke s doctrine of the separation of church and state is reflected in the Constitution of the United States In the form which Jefferson gives it it appears in the declaration that Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof Mill carries out the same principles in his attack on Sabbatarian legislation Such laws he thinks exceed the power of civil government They represent an illegitimate interference with the rightful liberty of the individual The notion that it is one s duty that another should be religious is in Mill s opinion the foundation of all the religious persecutions ever perpetrated Hegel on the other hand holds that the state should require all citizens to belong to a church but he points out that a church is all that can be said becau e since the content of a man s faith depends on his private ideas the state cannot interfere with it

The positions men take on the great issues of church and state thus seem to be determined in part by the diverse conceptions men have of religion This is no less true of opposing views on rel gious liberty on the treatment of heresy and schism on relig ous education the missionary calling and the conversion of infidels In the discussion of relig on perhaps more than anywhere else the first Yea or Nay seems to determine all other affirmations or denials

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to For example in 4 HOMER *Iliad* BK II [265 283] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 12

PAGE SECTIONS When the text is printed in one column the letters a and b refer to the upper and lower halves of the page For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119 When the text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand side of the page the letters c and d to the upper and lower halves of the right hand side of the page For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164

AUTHOR S DIVISIONS One or more of the main divisions of a work (such as PART BK CH SECT) are sometimes included in the reference line numbers in brackets are given in certain cases e g *Iliad* BK II [265 283] 12d

BIBLE REFERENCES The references are to book chapter and verse When the King James and Douay versions differ in title of books or in the numbering of chapters or verses the King James version is cited first and the Douay indicated by a (D) follows e g OLD TESTAMENT *Nehemiah* 7 45—(D) *II Esdras* 7 46

SYMBOLS The abbreviation esp calls the reader s attention to one or more especially relevant parts of a whole reference passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited

For additional information concerning the style of the references see the Explanation of Reference Style for general guidance in the use of *The Great Ideas* consult the Preface

Chapter 80 REVOLUTION

INTRODUCTION

MOST of the words commonly used as synonyms for revolution such as insurrection uprising rebellion or civil war carry the connotation of violence and the use of armed force Most of the great revolutions in western history which come readily to mind—those in the city states and empires of the ancient world the Peasants Revolt in Germany in the 15th century the rebellion led by Cromwell in 17th century England the American and French Revolutions in the 18th century the Russian and the Spanish Revolutions in our own time—have been affairs of bloodshed Yet neither in political theory nor in historic fact does revolution always involve the use of force or the resort to violence

Thucydides describes both violent and non violent revolutions in the alternations of democracy and oligarchy in the constitution of the Greek city states In England the Great Rebellion which by civil war succeeds in beheading one Stuart king is followed by the Bloodless Revolution of 1688 which without any war at all *unseats* another Some of the revolutions in the European states in the middle *years of the* 19th century are accompanied by barricades and *fighting Some* however like the revolutions accomplished by the Reform Bills in England or by constitutional amendments in the United States are fundamental changes in government effected by due *process* of law by peaceful shifts in the distribution of political power

A *revolution* may involve action in defiance of the law *and* yet be prosecuted without violence on the part of the revolutionists as in the case of the *rebellion* which Gandhi led against British rule in India by the method of civil disobedience The use of armed force may not however be the only technique of revolutionary violence *Revolutions are effected* in two ways according to Aristotle by force and by fraud Though fraud does no physical violence it does violence to the will of those who are deceived In some cases when fraud is used the citizens are deceived into acquiescing in a change of government and afterwards, Aristotle observes they are held in subjection against their will In other cases they may subsequently be persuaded and their allegiance and good will won But as Machiavelli's later consideration of these two techniques of seizing power indicates the choice between force and fraud is one of expediency rather than of principle He recommends guile as an alternative to force with force held in reserve should cunning fail Both methods however employ the strategy of warfare

As opposed to both force and fraud and even to the method of civil disobedience which acts outside the law or in violation of it the writers of *The Federalist* conceive the possibility of a revolutionary process which is at once peaceful and legal It is precisely because they think that the Constitution of the United States affords the opportunity for achieving political change by constitutional amendment *that they* defend the clause which guarantees to every State in this Union a republican form of government and promises to protect each of them upon application to the federal government against domestic violence To the objection that such a guaranty may involve an officious interference in the domestic concerns of the members Hamilton replies It could be no impediment to reforms of the State constitutions by a majority of the people in a legal and peaceable mode This right would remain undiminished The guaranty could only operate against changes to be effected by violence Towards the prevention of calamities of this kind too many checks cannot be provided

In another of the Federalist papers, Madison

considers the possibility of an insurrection pervading all the States and comprising a superiority of the entire force though not a constitutional right He thinks such a case beyond the compass of human remedies It is enough if the Constitution diminishes the risk of a calamity for which no possible constitution can provide a cure Nor does a conflagration through a whole nation or through a very large proportion of it proceeding either from weighty causes of discontent given by the government or from the contagion of some violent popular paroxysm seem to Hamilton to fall within any ordinary rules of calculation In his estimation no form of government can always either avoid or control such revolutions But he adds where the whole power of the government is in the hands of the people there is the less pretence for the use of violent remedies in partial or occasional distempers of the State

WHEN ARISTOTLE THINKS of revolutions as taking place without violence he does not have in mind the strictly modern device of constitutional amendment Political change he suggests may be the result of accidents rather than of planned actions Political revolutions he writes sometimes spring from a disproportionate increase in any part of the state And this disproportion may sometimes happen by accident as at Terentum from a defeat in which many of the notables were slain in a battle with the Iapygians just after the Persian War the constitutional government in consequence becoming a democracy Or when the rich grow numerous or properties increase the form of government changes into an oligarchy or a government of familes

On the other hand to writers like Hobbes and Locke revolution means war and is inseparable from violence Those who deny the authority of the Commonwealth —apart from which according to Hobbes men live in a state of war—by renouncing their subjection to the Sovereign relapse into the condition of war commonly called Rebellion For *rebellion* is but war renewed Unlike bees and ants the peace of whose societies is never threatened by rebellion there are amongst men very many that think themselves wiser and abler to govern the public better than the rest and these strive to reform and innovate one this way another that way and thereby bring it into distraction and civil war

Locke s principle seems to be that whoever uses force without right—as everyone does in society who does it without law—puts himself into a state of war with those against whom he so uses it Having entered into society and introduced laws for the preservation of property peace and unity amongst themselves men who set up force again in opposition to the laws do *rebellare*—that is bring back again the state of war—and are properly rebels

Aquinas also seems to align revolution (which he calls sedition) with war and strife though he thinks it differs from them in two respects First because war and strife denote actual aggression on either side whereas sedition may be said to denote either actual aggression or the preparation for such aggression Secondly they differ in that war is properly speaking carried on against external foes being as it were between one people and another whereas strife is between one individual and another while sedition in its proper sense is between the mutually dissentient parts of one people as when one part of the state rises in tumult against another part

THOUGH THE WORD revolution may be used in both senses it nevertheless seems to be the case that traditional discussions of the causes and prevention of revolution theories of revolutionary strategy and tactics and the great issue of the right of rebellion all seem to contemplate the resort to or at least the threat of force to gain an end This also seems to be implied in the popular conception of the difference between revolution and evolution

The contrast between revolution and evolution may explain why the note of violence disorder or disruption colors the idea of revolution The wo d evolution usually signifies change which is gradual and which tends in one direction rather than another that d rection being for the most part toward a progressive development of changes already accomplist d Revolution is abrupt Revolution n occu n either d ection against the tide as ll as th it As act on and react on can be eq l and opposite in phys cal mot on so in social change

revolution and counter revolution can aim in opposite directions In either case whether revolution reverses the direction of change or precipitates a radical transformation toward which things are moving too slowly revolution seems to involve *overthrowing* the established order rather than *developing* its latent tendencies

It is in this sense that the revolutionist is a radical He may also be a reactionary in the sense that the radical change he is willing to use force to achieve is a return to some earlier condition rather than one which in the judgment of his opponents is in the line of progress or evolution But whether reactionary or progressive the revolutionist is never conservative If the established order does not submit readily to the radical change which a revolutionary person or party seeks or if it resists it must be forced to yield The revolutionist can be reluctant to use force but he can never forswear it entirely

This seems to be the sense in which Marx and Engels conceive the program of the *Communist Manifesto* as a revolutionary program Their conception of a revolutionary class or party is not however limited to the proletariat in their struggle against the bourgeoisie They apply it to the bourgeoisie not in the contemporary world when the established order of capitalism makes the bourgeoisie conservative or reactionary but in the 18th century when the bourgeoisie overthrew the landed aristocracy

The bourgeoisie they write historically has played a most revolutionary part The French revolution for example abolished feudal property in favor of bourgeois property And again When Christian ideas succumbed in the 18th century to the rationalist ideas feudal society fought its death battle with the then revolutionary bourgeoisie That the French Revolution represents the struggle not between the propertied and the propertyless classes but between two propertied classes—the bourgeoisie and the aristocrats—seems evident to Marx in the fact that during the very first storms of the revolution the French Bourgeoisie dared *to take away from the workers the right of association just acquired*

No less than the *Communist Manifesto* the American Declaration of Independence is a revolutionary document Its signers are prepared to use force to overthrow the established order which in their view has worked grievous iniquities and injustices upon the colonies But in the Marxist view the rebellion of the colonists unlike the French Revolution is political rather than economic even if it has economic as well as political motivations This distinction between economic and political revolution seems to be peculiarly modern

It is not that the ancients—Thucydides, Plato and Aristotle for example—fail to recognize the class war which is paramount for Marx They observe (as is indicated in the chapter on Oligarchy) the struggle between the rich and the poor for control of the state They know that the opponents in the frequent and violent revolutions which disturbed the Greek city-states are the oligarchs and the democrats —the men of great property and the men of little or none

The revolt of the Helots in Sparta is the exceptional case of a rebellion of slaves against their masters For the most part the struggle is between free men belonging to different economic classes The oligarchical and democratic revolutions which these classes in society foment are political in the sense of seeking to change the constitution rather than the economic system itself even though the constitutional changes may have economic as well as political effects In the opinion of some Aristotle reports the regulation of property is the chief point of all that being the question upon which all revolutions turn

Aristotle is willing to admit that "the equalization of property may prevent the citizens from quarrelling but he does not think that economic injustice is the only cause of revolution or economic justice its absolute cure. The avarice of mankind he writes, is insatiable at one time two obols was pay enough but now when this sum has become customary men always want more and more without end for it is of the nature of desire not to be satisfied and most men live only for the gratification of it The beginning of reform in his opinion is not so much to equalize property as to train the nobler sorts of natures not to desire more and to prevent the lower from getting more that is to say they must be kept

lown but not ill treated Such a reform would hardly cure the evil of chattel slavery That requires a revolution which effects the equalization of political status not the equalization of property

If a rebellion of slaves in the ancient world had succeeded in abolishing the institution of slavery it would have been in the modern view an economic as well as a political revolution for it would have radically altered the mode of production It is in this sense that what Adam Smith describes as the change from an agrarian to a manufacturing economy is strictly an economic revolution though it is Marx not Smith who gives currency to the word revolution as used in this sense It is exemplified in our common understanding of the phrase the industrial revolution which refers to the radical change in an economy based on manufactures when mass production by machines in factories replaces the system of production by workers using their own tools in their own homes

In manufacture writes Marx the revolution in the mode of production begins with labor power in modern industry it begins with the instruments of labor Our first inquiry then i how the instruments of labor are converted from tools into machines or hat is the difference between a machine and the implements of a handicraft? But for Marx the meaning of economic revolution is not limited to radical changes in the physical conditions of production Such changes necessarily involve equally radical changes in the social relationships of economic classes and in their possession of political power In the *Manifesto* the modern bourgeoisie is said to be itself the product of a long course of development of a series of revolut ons in the modes of product on and exchange The bourgeoisie in turn cannot exist without constantly revolutionizing the instruments of production and thereby the relations of production and with them the whole relations of society

According to Marx and Engels each step in the development of the bourgeoisie was accompanied by a corresponding political advance of that class An oppressed class under the sway of the feudal nobility an armed and self governing association in th mediaeval commune afterwards in the period of manufacture proper serving either the semi feudal or the absolute monarchy as a counterpoise against the nobility the bourgeoisie has at last since the establishment of Modern Industry and of the world market conquered for itself in the modern representative State exclusive political sway

ON THE QUESTION whether economic revolutions in their social and political aspects require violence the writers of the *Manifesto* seem to be unambiguous—at least so far as the communist program is concerned Since the Communist revolution is the most radical rupture with traditional property relations and involves the most radical rupture with traditional ideas it can hardly be expected to occur without open warfare no less violent than the earlier struggle of the bourgeoisie against the aristocrats Standing face to face with the bourgeoisie today the proletariat alone is a really revolutionary class in whose development Marx and Engels see the transition from a more or less veiled civil war raging within existing society up to the point where that war breaks out into open revolution and where the violent overthrow of the bourgeoisie lays the foundation for the sway of the proletariat

It is precisely on the use of force that the *Manifesto* distinguishes between communism and socialism especially the utopian variety of the latter The Socialists reject all political and especially all revolutionary action they wish to attain their ends by peaceful means and endeavor by small experiments necessarily doomed to failure and by the force of example to pave the way for the new social Gospel They therefore endeavor and that consistently to deaden the class struggle and to reconcile the class antagonisms Communist strategy on the contrary everywhere supports every revolutionary movement against the existing social and political order of things The Communists disdain to conceal their views and a ms They openly declare that the r ends can be attained only by the forcible overth ow of all existing social co id tions

Though fundamentally economi the communist revolut on cannot h lp hav ng political effects Pol t cal power accord ng to Marx

and Engels is merely the organized power of one class for oppressing another This applies to the proletariat s conquest of power Yet they also seem to think that the dictatorship of the proletariat is only a temporary phase in the communist revolution If the prol tariat dur ing its contest with the bourgeoisie is compelled by the force of circumstances to organize itself as a class if by means of a revolution it makes itself the ruling class and as such sweeps away by force the old conditions of production then it will along with these conditions have swept a vay the conditions for the existence of class antagoni ms and of classes generally and will thereby have abolished its own supremacy as a class In aiming at the economically classless society with the consequent transformation of the state the communist program seems to con ceive its revolution as abolishing the possibility of or need for any further revolutions peaceful or violent economic or political

IN ADDITION TO the issues raised by the eco nomic theory and history which underlie revo lutionary communism there is the debatable question whether an economically classless soci ety means the withering away of the state or at least such changes in political institutions that revolution would cease to be possible or necessary Even a hypothetical consideration of this question seems to call for attention to the various ways in which political revolutions take place With the advent of the classless society no opportunity would remain at least in theory for the type of revolution in which one ruling class replaces another But in such a society it is still conceivable that the equivalent of a pal ace revolution might substitute one ruling indi vidual for another—by the old fa hioned methods of assas ination or usurpation

For Aristotle however all revolutions which produce a change from one form of government to another also involve the replacement of one ruling class by another He distinguishes be tween such revolutions as affect the constitu tion when men seek to change from an existing form into some other for example from de- mocracy into oligarchy or from oligarchy into democracy and those revolutions which do not affect the constitution when men with out d sturbing the form of government wheth er oligarchy or monarchy or any other try to get the administration into their own hands. To these two types of revolution Aristotle adds a third which may be directed a ainst only portion of the constitution *e g* the establish ment or overthrow of a particular office as a Sparta it is said that Lysander attempted to overthrow the monarchy and king Pausanias the ephoralty

Conceivably any of these political cha ges might be accomplished without v o'e In modern constitutional states the basic prin ciple of constitutions can be chan ed from oli garchy to democracy by amendments or [ ] reforms which extend the franchise The stru ture of the government as to its offices or th r organization can be chan ed by some form of peaceful plebiscite As the Federalists point out the polls provide a natural cure for an ill ad ministration in a popular or representative con stitution namely a change of men But such changes of government in the ancient city states even when constitutional appea to Ar istotle to be revolutionary in the double sense of involving violence or the threat of it and of being radical transformations of the polity What is true of constitutional changes in ancient republics is also true of monarchies and ty ran nies both ancient and modern

When absolute power is concentrated in the hands of one man his subjects are nec ssarily without juridical means for redressin their grievances by changing the occupant of the throne much less for abolishin the monarchy entirely in favor of self government M hiavel li s advice to the prince on safeguardin his po ver against usurping rivals or rebellious sub jects seems to be written against the ba k ground of force and fraud as the normal methods of changing rulers or modes of r le They ar the very same methods which the prince in power must employ to maintain his po tion

There are two ways of contesting Machia velli writes the one by la v the other by force the first method is proper to m n th second to beasts but because the first is fre quently not sufficient it is necessary to ha recourse to the second Therefore it is necessary for a prince to understand how to ava l himself of the beast and the man Bein compel knowingly to adopt the beast [a prince] ou

to choose the fox and the lion because the lion cannot defend himself against snares and the fox cannot defend himself against wolves It follows according to Machiavelli that the prince seldom can be though he should always try to *appear* to be merciful faithful humane religious upright A prince especially a new one cannot observe all those things for which men are esteemed being often forced in order to maintain the state to act contrary to fidelity friendship humanity and religion

The stories of oriental despotism told by Herodotus the account of the Caesars given by Tacitus and Gibbon the chronicle of the English monarchy in the historical plays of Shakespeare all seem to indicate that crowns seldom change heads without bloodshed Machiavelli s rules for the prince do not greatly enlarge upon Aristotle s description of the arts by which the tyrant preserves his power Even when Aristotle proposes as an alternative method that the tyrant can try to be benevolent he adds the Machiavellian suggestion that the tyrant should at least appear to act like a good king

The tyrant Aristotle writes should lop off those who are too high He must put to death men of spirit He must be on his guard against anything which is likely to inspire either courage or confidence among his subjects He must prohibit literary assemblies or other meetings for discussion and he must take every means to prevent people from knowing one another After enumerating many similar practices which he calls Persian and barbaric arts Aristotle concludes that there is no wickedness too great for the tyrant if he is to maintain himself in power

These matters are more fully discussed in the chapter on TYRANNY In our present consideration of the types of revolution we must note one other political change which usually involves the widespread turbulence of civil war That is the rebellion of subject peoples against their imperial masters Unlike civil uprisings which seek to overthrow governments or effect a change in the ruling classes or persons these wars of rebellion seek to liberate one people from another or to establish the independence of colonies at the expense of empire

Still another type of insurrection aims at the dissolution of the state itself What Rousseau deals with in theory as the degeneration of the state into anarchy by the repudiation of the social contract calls to mind no historic examples but the few historic instances of wars of secession certainly illustrate the point They aim to dissolve a federal state by severing ties of union which have something like a contractual character

The distinction between these types of civil war may be clear in theory yet difficult to apply to historic cases Which sort of insurrection—a rebellion of colonies or a secession of states—does the Declaration of Independence announce? A theory current among American political writers in 1775 suggests that the thirteen colonies claimed the status of self governing dominions in a confederacy united under the British crown On this theory does the principle stated in the Declaration—that it is sometimes necessary for one people to dissolve the political bands which have connected them with another and to assume among the powers of the earth the separate and equal station to which the laws of nature and of nature s God entitle them —cover the secession of the Southern states from the American union as well as the revolt of the American states from Great Britain or the British Commonwealth of nations? Questions of fact are involved of course in any comparison of the Revolutionary War of 1776 and the war between the states in 1861 but the question of principle turns on the whole issue of whether revolution is a matter of might or right

THE RIGHT OF REVOLUTION does not seem to be a central consideration in ancient political theory The ancient discussion of revolutions appears to be more concerned with their causes their methods and their prevention This does not mean that the ancients treat revolutions entirely as contests for power On the contrary Aristotle declares that the universal and chief cause of the revolutionary impulse is the desire of equality when men think that they are equal to others who have more than themselves or again the desire of inequality and superiority when conceiving themselves to be superior they think that they have not more but the same or less than their inferiors—pretensions which may or may not be just

Nevertheless Aristotle s elaborate treatise on revolution in the fifth book of his *Politics* deals alike with revolutions that spring from real and from fancied injustices The object of his inquiry seems to be what modes of destruction apply to particular states and out of what and into what they mostly change also what are the modes of preservation in states generally or in a particular state and by what means each state may be best pre erved —*not* how revolution can be justified or why rebellion is the crime of treason or the folly of anarchy Such questions seem to come to the foreground in modern political theory though they also have a certain prominence in mediaeval teaching

Aquinas for example holds that sedition is a special kind of sin because it is opposed to a special kind of good namely the unity and peace of a people He qualifies this however in the case of an uprising against tyranny even if it involves civil strife Since in his view a tyrannical government is not just because it is directed not to the common good but to the private good of the ruler there is no sedition in disturbing a government of this kind unless indeed the tyrant s rule be disturbed so inordinately that his subjects suffer greater harm from the consequent disturbance than from the tyrant s government Indeed Aquinas writes it is the tyrant rather who is guilty of sedition since he encourages discord and sedition among his subjects that he may lord over them more securely

Holding that the end of government is the good of mankind Locke asks in a similar vein which is better that the people should be always exposed to the boundless will of tyranny or that the rulers should be sometimes liable to be opposed when they grow exorbitant in the use of their power and employ it for the destruction and not the preservation of the property of their people ? Since force is to be opposed to nothing but unjust and unlawful force Locke argues that a king may be resisted when he exceeds his authority or prerogative and uses his power unlawfully Since such a king has dethroned himself and put himself in a state of war with his people what shall hinder them from prosecuting him who is no king as they would any other man who has put himself into a state of war with them?

The right to resist a tyrant or a kin turned despot may lead to regicide but this seems no different to Locke from the punishment of any other criminal He who may resist must be allowed to strike and furth mor Locke continues he has a right when he prevails to punish the offender both for the breach of the peace and all the evils that followed upon it Rousseau is even less hesitant to condone tyrannicide The contract of government is so completely dissolved by despotism writes Rousseau that the despot is master only so long as he remains the strongest as soon as he can be expelled he has no right to complain of violence The popular insurrection that ends in the death or deposition of a Sultan is as lawful an act as those by which he disposed the day before of the life and fortunes of his subjects As he was maintained by force alone it is force alone that overthrows him

Those who say that it may occasion civil wars or intestine broils to tell the people they are absolved from obedience when illegal attempts are made upon their liberties or properties may as well say upon the same ground in Locke s opinion that honest men may not oppose robbers and pirates because this may occasion disorder or bloodshed Nor does Locke think that the right to resist injustice means that governments will be overthrown upon every little mismanagement in public affairs Great mistakes in the ruling part, he writes many wrong and inconvenient laws, and all the slips of human frailty will be borne by the people without mutiny or murmur But if a long train of abuses prevarications and artifices all tending the same way make the design visible to the people it is not to be wondered that they should then rouse themselves and endeavor to put the rule into such hands which may secure to them the ends for which government was at first erected

Hence to those who say that his revolutionary principle lays a perpetual foundation for disorder Locke replies that it will never operate until the inconvenience is so great that the majority feel it and are weary of it and find it necessary to have it amended Rebellions will occur only when the majority feel that the laws and with them their estates liberties and lives are in danger and perhaps their religion

too and so will exercise their natural right to resist with force if necessary the illegal force used a ainst them But strictly it is not the people who rebel rather it is they who put down the sedition of the tyrant

What Locke states as a right of resistance the Declaration of Independence seems to put more positively as a right of rebellion apparently de ducing it from other natural rights—of life liberty and the pursuit of happiness It is to secure these rights that governments are in stituted among men so that whenever any form of government becomes destructive of these ends it is the right of the people to alter or to abolish it and to institute a new govern ment The Declaration admits that govern ments long established should not be changed for light and transient causes but when a people suffer a long train of abuses and usur pations it is their right it is their duty to throw off such government and to provide new guards for their security

AGAINST SUCH REVOLUTIONARY sentiments or principles Hobbes Kant and Hegel seem to take a stand though in each case they place some qualification on their denial of a right of resistance or rebell on Hobbes for example denies the right of men to change their form of government or of subjects to resist their Sover ei n *except for the sake of self preservation* When men covenant to form a commonwealth they are bound Hobbes says to uphold the actions and judgments of the Sovereign they have cre ated they cannot lawfully make a new cove nant amongst themselves to be obedient to any other without his permission They that are subjects to a monarch cannot without his leave cast off monarchy and return to the confus on of a di united multitude

Furthermore because every subject is by this institution author of all the act ons and judgments of the Sovereign instituted it fol lows accord ng to Hobbes that whatsoever he doeth it can be no injury to any of his sub jects nor ought he to be by any of them ac cused of injust ce Yet e ery subject has liberty in all those things the right whereof cannot by covenant be transferred such as the right of a man to defend his own body to re sist those that assault him or to have access to food air medicine or any other thing with out which he cannot live

Kant disallows rebellion as a matter of right unless resistance is required to fulfill a moral duty outside the sphere of public right Obey the authority which has power over you (in everything which is not opposed to morality) is a Categorical Imperative Hence though a juridical constitution may be vitiated by great defects and coarse errors it is nevertheless abso lutely unallowable and punishable to resist it

Since in his view public right is founded on the institution of a *sovereign* will uniting all particular wills by one law Kant argues that to allow a right of resistance to this sover eignty and to limit its power is a contradic tion It should be remembered also that for Kant the only legitimate form of government is a republic resting on the foundation of popu lar sovereignty Kant is not considering resis tance to tyrannical or despotic power which lacks all juridical authority

A similar qualification appears in Hegel s dis tinction between the rebellion of a conquered people and revolution in a well organized state Only the latter action is a crime for only the latter situation corresponds to the Idea of the state—fully realized for Hegel only in a con stitutional monarchy never in a despotism or tyranny A rebellion in a province conquered by war he says is a different thing from a rising in a well-organized state It is not against their prince that the conquered are in rebellion and they are committing no crime against the state because their connex on with their master is not a connexion within the Idea or one within the inner necessity of the constitution In such a case there is only a contract, no political tie

With such qualifications on their position those who disfavor revolution or deny its basis in right may not be completely opposed to those who apparently think rebellions can be justified There may be qualifications on the other side too Aquinas for example justifies sedition not against any government or ruler but o ly against tyranny The signers of the Declaration of Independence speak of a right to alter or abolish any form of government but the writers of the Federalist papers do not em equally willing to acknowledge a right to over throw the Constitut on of the United States.

OUTLINE OF TOPICS

1 The nature of revolution

- 1a The issue concerning violent and peaceful means for accomplishing social, political or economic change
- 1b The definition of treason or sedition the revolutionist as a treasonable conspirator
- 1c Revolution and counter revolution civil strife distinguished from war between states

2 The nature of political revolutions

- 2a Change in the form of government or constitution
- 2b Change in the persons holding power deposition assassination usurpation
- 2c Change in the extent of the state or empire dissolution secession liberation federation

3 The process of political revolution

- 3a The aim of political revolution the seizure of power the attainment of liberty justice equality
- 3b Ways of retaining power and combatting revolution
- 3c The causes and effects of revolution under different forms of government
  - (1) Revolution in monarchies
  - (2) Revolutions in republics aristocracies oligarchies and democracies
  - (3) Rebellion against tyranny and despotism

4 The nature of economic revolutions

- 4a Change in the condition of the oppressed or exploited the emancipation of slaves serfs proletariat
- 4b Change in the economic order modification or overthrow of a system of production and distribution

5 The strategy of economic revolution

- 5a Revolution as an expression of the class struggle rich and poor nobles and commons owners and workers
- 5b The organization of a revolutionary class the bourgeoisie and the proletariat as revolutionary classes in relation to different economic systems
- 5c The classless society as the goal of economic revolution the transformation of the state

6 The justice of revolution

- 6a The right of rebellion the circumstances justifying civil disobedience or violent insurrection
- 6b The right to abrogate the social contract or to secede from a federation

7 Empire and revolution the justification of colonial rebellion and the defense of imperialism

REFERENCES

To find the passages cited use the numbers in heavy type, which are the volume and page numbers of the passages referred to For example in 4 HOMER *Il ad* BK II [265 283] 12d the number 4 is the numbe of the volume in the set the number 12d indicates that the passage is in section d of page 12

PAGE S CTIONS When the text is printed in one c lumn the letters a and b refer to the upper and lower halves of the page. For example in 53 JA IES *Psycholoy* 116a 119b the passa e b ins n the upper half of pa e 116 and ends in the lower half of pa e 119 When the text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand side of the page the lett rs c and d to the upper and lower halves of the right hand side of the page For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half f the left hand side of page 163 and ends in the upper half of the right hand side of page 164

Chapter 81 RHETORIC

INTRODUCTION

RHETORIC is traditionally regarded as one of the liberal arts When the liberal arts are counted as seven and divided into the three and the four—the *trivium* and the *quadrivium*—rhetoric is grouped with grammar and logic not with the mathematical arts of arithmetic and geometry astronomy and music The implication of this grouping seems to be that rhetoric like grammar has something to do with language or discourse and that like logic it is concerned with thought with reasoning or argument But if grammar is the art of writing or speaking correctly and if logic is the art of thinking correctly it may be wondered what rhetoric can add to these other arts either on the side of language or of thought

Logic by itself does not suffice to ensure that words are properly used to express thought nor does grammar guarantee that discourse which is flawless in syntax also complies with the demands of rationality Hence neither grammar nor logic seems to challenge the function of the other as together they challenge the function of rhetoric

Upon the way this challenge is met depends not only the definition of rhetoric but also the value put upon it In the tradition of the great books rhetoric is both praised as a useful discipline which liberally educated men should possess and condemned as a dishonest craft to which decent men would not stoop Like the words sophistical and dialectical the epithet rhetorical carries traditionally as well as currently a derogatory implication The three words sometimes even tend to merge in meaning in expressing the same reproach against trickery Yet of the three sophistical alone implies an unqualified rebuke

We do not speak of good and bad sophistry But dialectic has its defenders as well as its detractors and even those who like Plato charge rhetoric with being an art of enchantment or a form of flattery also distinguish between a true and a false rhetoric the one associated with dialectic as a wholly admirable pursuit the other classed with sophistry as a vocation divorced from virtue According to Bacon the aim of rhetoric is to support reason not to oppress it Rhetoric may be misused but logic also has its abuses Rhetoric can be no more charged in Bacon s opinion with the coloring of the worse part than logic with sophistry or morality with vice

THE PURPOSE AND scope of rhetoric are capable of broad and narrow definitions The broader view which we shall consider subsequently tends to merge rhetoric with poetics as together the art of eloquence in any sort of discourse The narrower view tends to restrict rhetoric to the art of persuasion in the sphere of practical affairs Rhetorical skill consists in getting others to embrace certain beliefs to form the opinions or make the judgments which the speaker or writer wishes them to adopt Usually action not persuasion is the ultimate goal The rules of rhetoric are supposed to give one power not merely to move the minds of men to certain conclusions but through persuasion of their minds to move men to act or not act in a certain way

The sphere of rhetoric so conceived is limited to moral and political problems The things about which men deliberate before acting the things on which they pass moral judgments or make political decisions constitute the subject matter of oratory or what Hobbes calls exhortation and dehortation that is counsel accompanied with signs in him that giveth it of vehement desire to have it followed

In the narrower conception rhetoric seems to be confined to *oratory* It is with oratory and

orators that Socrates seems to be concerned when he discusses rhetoric with Phaedrus or with Gorgias Gorgias who was a teacher of rhetoric praises the power of the orator to persuade the judges in the courts or the senators in the council or the citizens in the assembly or at any other public meeting In view of this Socrates asks him whether he will accept the definition of rhetoric as the artificer of persuasion When Gorgias admits that persuasion is the chief end of rhetoric Socrates goes on to ask whether rhetoric is the only art which brings persuasion or do other arts have the same effect? Does he who teaches anything persuade men of that which he teaches or not? If so then arithmetic as well as rhetoric is an artificer of persuasion

Gorgias reminds Socrates of his initial point about the orator that rhetoric is the art of persuasion in courts of law and other assemblies about the just and unjust But Socrates is still not satisfied that rhetoric has been sharply defined He introduces the distinction between knowledge and belief or opinion and gets Gorgias to agree that whereas there cannot be false knowledge as well as true beliefs and opinions may be either true or false Persuasion can therefore be of two sorts— one which is the source of belief without knowledge as the other is of knowledge

Gorgias is willing to limit rhetoric to that form of persuasion which only gives belief to which Socrates adds the emphatic negative that the rhetorician does not instruct the courts of law or other assemblies about things just and unjust but creates beliefs about them If an assembly wishes to learn about matters connected with medicine or shipbuilding it consults the physician or shipwright not the orator But says Gorgias when a decision has to be given in such matters, the rhetoricians are the advisers they are the men who win their point He confirms this by reminding Socrates that the speeches of Themistocles and Pericles not the suggestions of the builders determined the Athenian assembly in the construction of the harbor the docks and walls

By way of further illustration Gorgias tells of occasions when he has succeeded in getting patients to do what they would not do on the advice of their physicians I have persuaded the patient he says to do for me what he would not do for the physician just by the use of rhetoric Similarly in a contest for public office between a rhetorician and a man of any other profession the rhetorician more than any other would have the power of getting himself chosen for he can speak more persuasively to the multitude than any of them and on any subject Such is the nature and power of the art of rhetoric!

In comparing it with dialectic Aristotle seems to have a different conception of the function of rhetoric Neither rhetoric nor dialectic he says is the scientific study of any one separate subject both are faculties for providing arguments Both also are concerned with arguments which fall short of scientific demonstration that is with matters of opinion concerning which something probable can be said on either side of the issue

Though for Aristotle rhetoric is the counterpart of dialectic in that both deal with arguments on any subject his differentiation between the two disciplines seems to indicate that rhetoric is limited to the consideration of oratory in the familiar sense of public speakin The rhetorician is concerned with persuading an audience not as the dialectician is with carrying on a dispute in which two individuals may be privately engaged The persuasion furthermore is directed to obtaining a certain response from that audience—not merely agreement but either action or a decision to act or approval which charged with emotional force or enthusiasm has practical significance

The divisions of rhetoric according to Aristotle are determined by the kinds of oratory as these in turn are determined by the types of audience to be addressed Of the three elements in speech making—speaker subject and person addressed Aristotle writes it is the last one the hearer that determines the speech's end and object The hearer must be either a judge with a decision to make about things past or future or an observer A member of the assembly decides about future events a juryman about past events while those who merely decide on the orator's skill are observers

From this it follows that there are three divisions of oratory (1) political (2) forensic and (3) the ceremonial oratory of display"—or

as these three are sometimes named delibera tive legal and epideictic Political speaking urges us either to do or not do something Forensic speaking either attacks or defends somebody The ceremonial oratory of dis play either praises or censures somebody These three kinds of rhetoric refer to three different kinds of time The political orator is concerned with the future he tries to persuade men about things to be done or not done hereafter The party in a case at law is concerned with the past one man accuses the other and the other defends himself with reference to things al ready done The ceremonial orator is properly speaking concerned with the present since all men praise or blame in view of the state of things existing at the time though they often find it useful also to recall the past and to make guesses about the future

Rhetoric has three distinct ends in view one for each of its three kinds The political orator aims at establishing the expediency or the harm fulness of a proposed course of action Parties in a lawsuit aim at establishing the justice or in justice of some action. Those who praise or attack a man aim at proving him worthy of honor or the reverse

THIS CONCEPTION OF rhetoric as concerned with oratory or public speaking gives one answer to the question of what rhetoric adds to grammar and logic as arts of discourse In ora tory more is involved than the communication of ideas the marshalling of arguments the making of proofs D scourse whether written or spoken has an effect upon the emotions as well as upon the mind and disposes a man to act as well as the mind to assent

The communicating of ideas by words Berkeley observes is not the chief and only end of langua͏ge as is commonly supposed There are other ends as the rais ng of some pas sion the excitin͏g to or deterring from an ac tion the putting the mind in some particular disposition—to which the former is in many cases barely subservient and sometimes entirely omitted I entreat the reader to reflect with himself and see if it doth not often happen either in hearing or reading a discourse that the passions of fear love hatred admiration dis dain and the like arise immediately in his mind upon the perception of certain words without any ideas coming between

Engaged in the oratorical task of persuading the people of New York to ratify the federal constitution the writers of the Federalist papers are aware that a torrent of angry and malig nant passions will be let loose in the debate of that issue They realize that arguing for the adoption of certain political principles or con clusions is not like teaching geometry the ob jects of which are entirely abstracted from those pursuits which stir up and put in motion the unruly passions of the human heart

Hamilton admits at once in the opening paper that the plan offered to our delibera tions affects too many particular interests in novates upon too many local institutions not to involve in its discussion a variety of objects foreign to its merits and of vie vs passions and prejudices little favorable to the discovery of truth Nevertheless he tries to persuade his audience to judge the issue on the merits of the argument alone

The opponents of the Constitution he says may be actuated by upright intentions The opposition may spring from sources blameless at least if not respectable—the honest errors of minds led astray by preconceived jealousies and fears So numerous indeed and so powerful are the causes which serve to give a false b as to the judgment that we upon many occasions see wise and good men on the wrong as well as on the right side of questions of the first ma͏gnitude to society

To recognize this Hamilton tells his audi ence is to be on guard against all attempts from whatever quarter to influence your deci sion by any impressions other than those which may result from the evidence of truth He wishes them to cons der him as relying upon nothing but the merits of his case I frankly acknowled e to you my convictions he writes and I will freely lay before you the reasons on which they are founded My motives must remain in the depository of my own breast My arguments will be open to all and may be judged by all They shall at least be offered in a spirit which ill not disgrace the c use of tr ith

We can detect here nothe lem nt n the art of rheto ic The orator em to be con cerned not only v ith the stre gth of his argu

ments and with the passions of the audience which he hopes to move by these arguments but also with the impression he makes upon that audience as a person of good character and honest intentions devoted to the truth and above all to the best interests of those whom he addresses

The great speeches reported—or perhaps polished if not invented—by Thucydides exemplify this effort on the part of the orator as do also the orations written by Shakespeare for his characters of which the speeches of Brutus and Antony in *Julius Caesar* are among the most notable as well as the most familiar The point is also illustrated by the *Communist Manifesto* which is denounced as propaganda by those who mistrust the writers but to those who trust them is powerful and persuasive oratory

Separating the use of witnesses and documents by the forensic orator from what he calls the strictly artistic means of persuasion—*i e* the means intrinsic to the art of rhetoric—Aristotle divides the latter into the three elements already noted Persuasion he says depends on the personal character of the speaker on putting the audience into a certain frame of mind [and] on the proof or apparent proof provided by the words of the speech itself Persuasion is achieved by the speaker s personal character when the speech is so spoken as to make us think him credible Secondly persuasion may come through the hearers when the speech stirs their emotions Thirdly persuasion is effected through the speech itself when we have proved a truth or an apparent truth by means of the persuasive arguments suitable to the case in question

These being the three technical means of effecting persuasion Aristotle concludes that rhetorical skill must cons st in the ability (1) to reason logically (2) to understand human character and goodness in their various forms and (3) to understand the emotions to know their causes and the way in which they are excited The art of rhetoric therefore involves more than training in grammar and logic. It requires the study of ethics and psychology—particularly knowledge of the types of human character and knowledge of the passions

The same consideration of the conditions of oratory seems to lead Socrates to tell Phaedrus that Thrasymachus or anyone else who teaches rhetori ought to give an exact description of the nature of the soul to explain the mode in which it acts or is acted upon The rhetorician he goes on having classified men and speeches, and their kinds and affections and adapted them one to another will be able to tell the reasons of his arrangement and show why one soul is persuaded by a particular form of argument and another not

This fact about rhetoric—that it must adapt speech to persons as well as to subject matters—seems to occasion Socrates definition of oratory as the art of enchanting the soul It is not he tells Phaedrus confined to courts and public assemblies Whether this art is a good or evil thing depends on whether it requires the speaker to know—more than the nature of the person he is addressing—the truth about the matters spoken of To engender probabilities in the minds of the many by the likeness of the truth it is necessary says Socrates to know the truth He who knew the truth would always know best how to discover the resemblances of the truth Such a man might be able not only to please and so to persuade his audience but also, perhaps he might be able to say what is acceptable to God

The issue about rhetoric then—at least so far as that issue concerns its being an art consistent with virtue—seems to turn on the admixture of pleasure and truth The question is whether given a particular sort of audience to persuade the orator does not have to choose between pleasing them and telling them the truth Does the art of rhetoric extend to the persuasion of bad men as well as good? Is the skill of the orator to be measured by his success in persuading without regard to the character of the audience he has persuaded and the means he has been forced to use? Does the goodness of the orator—and of his speech—depend upon his being morally virtuous as well as rhetorically skillful?

One view of rhetoric seems to identify persuasion with pleasure and to divorce it from truth Pascal for example in his essay *On Geometrical Demonstration* speaks of two methods the one of convincing the other of pleasing In order

to persuade he writes one must consider the person with whom one has to deal whose spirit and heart one must know the principles he accepts, the things he loves In view of such considerations Pascal holds that the art of persuasion consists more in pleasing than in convincing to such an extent is it true that men are controlled more by whim than by reason He does not doubt that there are rules which are as reliable with respect to pleasing as there are for demonstrating nor does he seem to condemn rhetoric for being such an art unless he writes with irony when he says that pleasing is incomparably more difficult more subtle more useful and more admirable

Rhetoric so conceived appears to Locke to be a powerful instrument of error and deceit and to Plato to be no art at all but a form of flattery As cookery tries to please the palate without caring what is good for the health of the body so rhetoric according to Plato aims to delight without caring what is good for the soul or the state Cookery and rhetoric are shams or simulations of the genuine arts of medicine and politics which aim at the good not at pleasure 'This is the sort of thing Socrates tells Callicles which I term flattery whether concerned with the body or the soul or whenever employed with a view to pleasure and without any consideration of good and evil

Socrates then asks Callicles whether he knows rhetoricians who aim at what is best and seek to improve the citizens by their speeches or whether all are bent upon giving them pleasure forgetting the public good in the thought of their own interest playing with the people as with children and trying to amuse them but never considering whether they are better or worse for this

When Callicles replies that he thinks there are some who have a real care for the public in what they say Socrates says that he is contented with the admission that rhetoric is of two sorts one which is mere flattery and disgraceful declamation the other which is noble and aims at the training and improvement of the souls of the citizens and strives to say what is best whether welcome or unwelcome to the audience But he asks Callicles have you ever known such a rhetoric or if you have and can point out any rhetorician of this stamp who is he?

SOCRATES MAY NOT be asking a rhetorical question He may be presenting the defenders of rhetoric with this critical dilemma *either* the orator adheres to the truth and aims at the good even if such highmindedness defeats his efforts at persuasion with an audience whom he thus displeases *or* the orator takes persuasion as his end and subordinates everything else to the rhetorical means for succeeding with any sort of audience

Bacon rises to the defense by rejecting the dilemma as ungenuine The duty and office of rhetoric he writes is to apply reason to the imagination for the better moving of the will He admits that rhetoric is controlled by other considerations than the truth Though logic handleth reason exact and in truth and though the proofs and demonstrations of logic are toward all men indifferent and the same the proofs and persuasions of rhetoric ought to differ according to the auditors

Nevertheless Bacon thinks it was great injustice in Plato though springing out of a just hatred for the rhetoricians of his time to regard rhetoric as a voluptuary art resembling it to cookery that did mar wholesome meats and help unwholesome by a variety of sauces to please the taste For we see that speech is much more conversant in adorning that which is good than in coloring that which is evil for there is no man but speaketh more honestly than he can do or think and it was excellently noted by Thucydides in Cleon that because he used to hold on the bad side in causes of state therefore he was ever inveighing against eloquence and good speech knowing that no man can speak fair of courses sordid and base

Aristotle s defense of rhetoric seems to be implied in the remark that its function is not simply to succeed in persuading but rather to discover the means of coming as near such success as the circumstances of each case allow Just as for him the sophist differs from the dialectician not in the skills of argument or dispute but in moral purpose or respect for truth so the name rhetorician may be applied to two sorts of men Rhetoric may signify either the speaker s knowledge of his art or his moral

purpose For want of separate names both the honest and the sophistical orator are called and can claim to be rhetoricians and it is this which confuses the issue

IN THE TRADITION of the great books Aristotle s *Rhetoric* occupies a place comparable to that which as noted in the chapter on POETRY his *Poetics* unquestionably fills It seems to be not merely the first but the standard treatise on oratory It divides rhetoric into three parts—the first concerned with invention the second with the disposition or order of a speech the third with problems of expression To the last of these belongs the analysis of the orator s use of language and his style in speaking to the second the analysis of the structure of an oration into such parts as proem statement argument and epilogue and to the first under the head of invention belongs the consideration of the means of persuasion

As we have already noted the artistic means of persuasion are according to Aristotle threefold—emotions character and argument The orator must consider how to arouse and use the passions of his audience as well as calculate how far to go in displaying his own emotions He must consider the moral character of the audience to which he is appealing and in this connection he must try to exhibit his own moral character in a favorable light Finally he must know the various types and sources of rhetorical argument—not only what sorts of argument are available for a particular purpose but also how to employ each argument most persuasively In this last respect Aristotle distinguishes rhetorical proof from rhetorical induction—the use of what he calls the enthymeme as opposed to the use of examples—and he relates this distinction to the difference between dialectical proof and induction which he treats in the *Topics*

Cicero and Quintilian may extend Aristotle s analysis in certain directions but neither they nor modern writers like Campbell and Whately depart far from the framework Aristotle sets up for the discussion of oratory Even those who reject Aristotle s authority in logic natural philosophy and metaphysics pay him the tribute of following (as does Hobbes) his treatment of oratory or of approving (as does Bacon) his contribution to rhetoric In the case of this science as with few others Bacon finds no serious deficiencies in the accepted tradition He calls rhetoric a science excellent and excellently well labored and places the emulation of Aristotle first among the causes why later writers in their works of rhetorics exceed themselves

Yet by another standard Aristotle s *Rhetoric* may be judged deficient Because he confines his attention almost exclusively to oratory Aristotle s discussion leaves rhetoric in a larger sense almost untouched This limitation of rhetoric to the subject matter of oratory does not go unexplained Every other art Aristotle writes can instruct or persuade about its own particular subject matter for instance medicine about what is healthy and unhealthy geometry about the properties of magnitudes, arithmetic about numbers and the same is true of the other arts and sciences But rhetoric he says we look upon as the power of observing the means of persuasion on almost any subject presented to us

This last statement would seem to give rhetoric complete generality Aristotle qualifies it however People fail to notice he says that the more correctly they handle their particular subject the further they are getting away from pure rhetoric So far as knowing good arguments and knowing how to use them are concerned the physicist and the mathematician need no help from rhetoric The art of rhetoric is necessary only in dealing with such topics as do not fall within the subject matters or systems of the established arts and sciences. Such topics are precisely those with which the orator must deal The duty of rhetoric Aristotle writes in summary is to deal with such matters as we deliberate upon without arts or systems to guide us in the hearing of persons who cannot take in at a glance a complicated argument or follow a long chain of reasoning This is his answer to those who have given rhetoric a far wider subject matter than strictly belongs to it

But Aristotle s explanation of his limitation of rhetoric is itself limited to only one of its major parts namely the construction of arguments As contrasted with the mathematician, the physician and the philosopher whose mastery of the subject matter of their arts or sci

ences gives them a command of the relevant principles and methods of argument only the orator needs the special art of rhetoric to provide him with the topics from which examples and enthymemes can be drawn and to give him skill in the use of such arguments But it is not only the orator who must consider the character and emotions of his audience It is not only the orator who must consider the best way in which to order the parts of an elaborate discourse Above all it is not only the orator who is faced with the problem of using language more or less effectively in the expression of thought and especially in its communication to others All these considerations and problems are common to the orator and the teacher They are considerations and problems which must be faced not merely by the public speaker who tries to move an audience to action but by anyone—poet philosopher or scientist—who tries to write whatever he has to say as effectively as possible

Competence in a particular art or science may give a man competence with respect to arguments in the field of his particular subject matter but it does not seem to give him competence with respect to these other considerations and problems which he faces when he tries to communicate his knowledge or thought Here then is the possibility of a broader conception of the art of rhetoric—an art concerned not merely with being persuasive in the sphere of action but with eloquence or effectiveness in the expression of thought

We find this view of rhetoric reflected in Chaucer s *Canterbury Tales* In his Prologue the Franklin asks his compan ons to forgive his crude speech for he explains I never learned rhetoric to tell you the truth whatever I say must be blunt and plain I never slept on Mount Parnassus or stud ed Marcus Tullius Cicero And the Squire apologizes for the inadequacy of his English to describe the beauty of Canace It would take an excellent rhetorician he says who knew his colorful figures of speech to describe her adequately Though Aristotle s *Rhetoric* for the most part neglects this broader conception of rhetoric in order to expound the rules of oratory the third book of his treatise which deals with the use of language ind cates that problems of style are common to or tory and poetry and to other types of discourse as well

Kant seems to hold this broader conception of rhetoric when he says that the arts of speech are *rhetoric* and *poetry* In the tradition of western thought the two arts tend to become identified when each is separated from any particular subject matter As appears in the chapter on POETRY poetry like rhetoric has a broader and a narrower meaning In the narrower meaning it is the art of the narrative just as in its narrower meaning rhetoric is the art of oratory The other sense in which poetics as an art can be understood is according to Bacon with respect to words not matter In this sense he writes it is but a character of style and belongeth to arts of speech

In this sense the poetic art is hardly distinguishable from the rhetorical art The problems involved in composing a good speech are not the same as those involved in writing a good poem (or what Bacon calls a feigned history) But when poetics and rhetoric are each separated from such problems to become the arts of writing or speaking well about anything then in becoming as general as discourse itself they tend to become one and the same art—an art of style or expression an art of preaching or teaching the truth about any matter on which one mind seeks to communicate with another

IN THE TRADITION of the great books no book does for the art of rhetoric in general what Aristotle s *Rhetoric* does for that art in the limited sphere of oratory But Augustine s treatise *On Christian Doctrine* engages in a general rhetorical analysis that is in a way comparable to Aristotle s analysis of oratory In this work Augustine brings his own professional trainı ıg as an orator to bear on the problems of reading interpreting and expounding Sacred Scripture The fact that he is dealing with Sacred Scripture and hence in his view with the teaching of the most fundamental truths lifts him above the limited concerns of the orator but the fact that he limits himself to Sacred Scr pture also prevents him from formulating his rules of interpretation and expos t on vith the compl t gen r lity they would have to possess n o d r to be th rules of a general rt of rheto c

At the open ng of th fou th book of *Chris*

tian Doctrine Augustine declares that having considered in the preceding books the mode of ascertaining the proper meaning of Scripture he will now treat the mode of making known the meaning when it is ascertained He disclaims any intention to lay down rules of rhetoric he wishes merely to engage it on the side of truth To this end he tries to show how Scripture itself and such holy men as St Cyprian and St Ambrose in commenting on Scripture have employed the art of rhetoric

It is the duty Augustine writes of the interpreter and teacher of Holy Scripture both to teach what is right and refute what is wrong and in the performance of this task to conciliate the hostile to rouse the careless and to tell the ignorant both what is occurring at present and what is probable in the future But once his hearers are friendly attentive and ready to learn whether he has found them so or has himself made them so the remaining objects are to be carried out in whatever way the case requires The first rule of a general rhetoric would thus seem to be one of creating a receptive frame of mind in the persons being addressed This accomplished the teacher must proceed with various alternatives in mind

If the hearers need teaching Augustine writes the matter treated of must be made fully known by means of narrative On the other hand to clear up points that are doubtful requires reasoning and the exhibition of proofs If however the hearers require to be roused rather than instructed in order that they may be diligent to do what they already know greater vigor of speech is needed Here entreaties and reproaches exhortations and upbraidings and all the other means of rousing the emotions are necessary

In Scripture and its great commentators Augustine finds wisdom not aiming at eloquence yet eloquence not shrinking from wisdom He also finds examples of the three kinds of style which Cicero had distinguished—the eloquence of those who can say little things in a subdued style moderate things in a temperate style and great things in a majestic style These three styles Augustine connects with the three ends which Cicero had assigned to eloquence—teaching giving pleasure and moving The subdued style he says should be used in order to give instruction the temperate style in order to give pleasure and the majestic style in order to sway the mind

The great books of history science and philosophy provide additional materials for general rhetorical analysis They offer us the light of examples at least even if they do not like Augustine s commentary on Scripture give us the guidance of rules Such historians as Herodotus Thucydides Tacitus and Gibbon exhibit a diversity of styles in the writing of history The diversity is not only on the grammatical level of the use of language but also on the logical level of order and argument Rhetorical principles control the way in which the language and the organization of the parts are suited to each other and to the historian s purpose—to the effect he wishes to produce upon his reader

The way in which Euclid writes the *Elements* is a style of exposition having rhetorical as well as logical features In its rhetorical (if not its strictly logical) form it is applicable to other subject matters This may be seen in Spinoza s adoption of it in his *Ethics* and in Newton s adaptation of it in his *Mathematical Principles of Natural Philosophy* The dialogue form which Plato seems to have invented for writing philosophy appears to recommend itself rhetorically not only to other philosophers but also to a scientist like Galileo in the composition of his *Two New Sciences* If the doctrines of the *Summa Theologica* or of the *Critique of Pure Reason* were separated from the very special styles of these two works they would probably not have the same effect upon the reader and as they are written they affect different readers differently as differently as do the styles of Dante Milton Melville Dostoevsky Adam Smith and Karl Marx

Some methods of exposition may be more appropriate than others to certain subject matters There is a great difference in the delivery of mathematics says Bacon and of politics. But in every subject matter or field of learning there is the common problem of how to make language serve most effectively to enlighten or convince in the communication of thought The problem arises in the writing of a single sentence as well as in the organization of a whole discourse

THE CHOICE OF WORDS and the formation of new words the invention and employment of figures of speech by which abbreviation or amplification of discourse may be achieved and the imagination freshened—these are some of the considerations of style which Aristotle discusses (both in his *Rhetoric* and in his *Poetics*) and which Augustine illustrates in his analysis of Scripture They suggest the rules of a general rhetoric founded on principles as universal as Pascal s insight that words differently arranged have a different meaning and meanings differently arranged have a different effect

This observation indicates a further answer to the question raised much earlier namely why the art of rhetoric is needed over and above the skills of grammar and logic For oratory the question has been answered by reference to those rules of rhetoric which deal with the passions and with moral character But for a more general rhetoric concerned with all discourse the answer must be in terms of rules of style of the sort Pascal s observation suggests

If there were never more than one grammatically and logically correct way of saying anything then grammatical and logical standards would suffice for the regulation of sound discourse But if there are always several ways of stating something and if each of them satisfies the rules of grammar and logic but differs in the impression it makes on the mind then criteria other than those of grammar and logic will be needed to determine our choice of which to use

Such criteria may take the passions and the imagination into account but they may also look primarily to the manner in which the mind itself naturally works The fact that there are several ways of presenting the same truth to the mind—and usually several ways in which the mind can interpret the same statement—defines the scope of a general rhetoric and the relation of its rules to those of grammar and logic

Nevertheless some of the great authors seem to doubt the worth of rhetoric in science or philosophy Locke for example admits that in discourses where we seek pleasure and delight rather than information and improvement such ornaments —as figurative speeches and allusion in language — can scarce pass for faults But he adds if we would speak of things as they are we must allow that all the art of rhetoric besides order and clearness all the artificial and figurative application of words eloquence hath invented are for nothing else but to insinuate wrong ideas move the passions and so indeed are perfect cheats and where truth and knowledge are concerned cannot but be thought a great fault either of the language or person that makes use of them

Descartes also declares that those who have the strongest power of reasoning and who most skilfully arrange their thoughts in order to render them clear and intelligible have the best power of persuasion even if they can but speak the language of Lower Britanny and have never learned rhetoric Yet he qualifies this severity somewhat by identifying dialectic with rhetoric and granting its possible use to serve to explain at times more easily to others the truths we have already ascertained

Plato for the most part tends in the opposite direction keeping dialectic and rhetoric poles apart But if there were a true as opposed to a false rhetoric a rhetoric concerned with knowledge and truth not merely opinion and pleasure he would be willing it seems to admit it to the company of dialectic and regard it as an aid in the teaching if not the discovery of the truth The pedagogical utility of rhetoric as well as dialectic appears in the summary which Socrates gives to Phaedrus after they have finished examining the speeches about love

Until a man knows the truth of the several particulars of which he is writing or speaking Socrates says and is able to define them as they are and having defined them again to divide them until they can no longer be divided and until in like manner he is able to discern the nature of the soul and discover the different modes of discourse which are adapted to different natures and to arrange and dispose them in such a way that the simple form of speech may be addressed to the simpler nature and the complex and the composite to the more complex nature—until he has accompl h d ll th s he will be unable to handle arguments according to rules of art e ther for the pu pose of teaching or pe u d ng

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the pa sages referred to For example in 4 HOME Iliad BK II [265 283] 12d the number 4 is the number of the volume in the set the number 12d ind cates that the passage is in section d of page 1

PAGE SECTIONS When the text is p inted in one column the letters a and b refer to the upper and lower hal es of the page For example in 53 JAM s Psychology 116a 119b the passage begins in the upper half of page 110 and ends in the lo ver half of page 119 When th text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand side of the page the letters a d d to the upper and lo er halves of the right hand side of the p e For example in 7 PLATO Sympos um 163b 164c the passa e beg ns in the lo half of the left hand side of pa e 163 and ends in the upper half of the right hand s de of p e 164

Chapter 82 SAME AND OTHER

INTRODUCTION

THE problems of identity and diversity—of sameness and otherness similarity and difference—occur at that level of philosophical thought which deals with being and with unity Plotinus for example says that in addition to Being Motion and Rest we are obliged to posit the further two Identity and Difference so that we have in all five genera

In Aristotle s conception terms like being one and same have a greater universality than the terms he calls the highest genera *e g* substance quantity quality relation and so forth These latter represent categories or classes under which certain things fall and others do not Not everything is a substance or a quantity but in Aristotle s opinion there is nothing of which it cannot be said that it is a being in some sense that it has some kind of unity that it is identical with itself and that compared with anything else in the whole universe it is in certain respects the same in others d fferent

The fundamental relation of quantities with one another namely equality con ists in their being the same The fundamental relation of qualities consists in their being alike or the same in spite of some d fference in degree or intensity *e g* a brighter and a darker red of the same hue The notion of relation itself seems to be as fundamental as that of sameness since in comparisons one thing is said to be the same or different only in relation to something else yet it also seems to be true that relations can be the same or similar for the essence of proportion or analogy l es in one thing s being related to a second as a third is to a fou th The sameness of two relationships is the object of the comparison

Such considerat ons are sometimes called metaphysical w th an invid ous tone But no one not even those who would eliminat meta physical discussion as indulging in vicious ab stractions or as verging on the meaningless can easily avoid such notions as identity and diversity It is not merely that ordinary speech as well as scientific discourse must use such words as same and other almost as frequently as the words is and not or one and many Those who are critical of theorizing and who want to save discourse itself from be coming too metaphysical are still obliged to give some account of what it means for things to be the same or different and of how we know when they are

Semantics currently has vogue as a critical instrument for safeguarding discourse from ambiguity and nonsense and perhaps also for spotting metaphysical legerdemain But seman tics itself cannot go far in its own analysis of words and meanings without having to explain how the *same* word can have *different* meanings or how the *same* meaning can be expressed by *different* words It does not seem likely that an adequate explanation could be developed with out some theory of sameness and otherness

THE SENSE OF SAMENESS says William James is the very keel and backbone of our think ing He is here speaking of the sense of same ness from the po nt of view of the mind s [illegible] ture alone and not from the point of view of the universe Whether there be [illegible] real sameness in *th ngs* or not or whether the mind be true or false in its assumptions of [illegible] on the point remains that the [illegible] makes cont nual use of the *notion* of [illegible] and if deprived of it would have a [illegible] from what it has [illegible] cal sense of ident ty sam[illegible] upon us from the outer [illegible] be none the wiser [illegible] sen e on the other [illegible]

be an unbroken flux and yet we should perceive a repeated experience

James distinguishes three principles of identity In addition to the *psychological* law according to which we feel a later experience to be the same as an earlier one he refers to the *ontological* principle which asserts that every real thing is what it is that *a* is *a* and *b b* and the *logical* principle which declares that what is once true of the subject of a judgment is always true of that subject James seems to think that the ontological law is a tautological truism whereas the logical and the psychological principles have further implications not immediately obvious Locke appears to take a contrary view He finds the identity of all *ideas* self evident while to him the real identity of *things* is much more difficult to grasp

The principle of identity and its companion principle of contradiction are according to Locke expressed in the propositions Whatsoever is is and It is impossible for the same thing to be and not to be — these two general propositions amounting to no more in short but this that the same is the same and the same is not different But Locke adds the mind without the help of any proof or reflection on either of these general propositions perceives so clearly and knows so certainly that the idea of white is the idea of white and not the idea of blue and that the idea of white when it is in the mind is there and is not absent that the consideration of these axioms can add nothing to the evidence or certainty of its knowledge I appeal to every one s own mind whether this proposition A circle is a circle be not as self evident a proposition as that consisting of more general terms Whatsoever is is.

But unlike the comparing of an idea with itself real identity according to Locke requires us to consider a thing as ex sting at any determined time and place and to compare it v ith itself ex st ng at another time W] en therefore v e demand whether anything be the same or no? it refers always to something that existed at such a time in such a place which it was certain at that instant was the same with itself and no other from wl ence it follows that one thing cannot have two begin n ngs of existence nor two th ngs one beginning it being impossible for two things of the same kind to be or exist in the same instant in the very same place or one and the same thin in different places That therefore that had one beginning is the same thing and that which had a different beginning in time and place from that is not the same but diverse In short across a lapse of time a thing remains identical in Locke s view or maintains its identity if existence having made it one particular thing under any denomination the same existence continued preserves it the same individual under the same denomination

This understanding of real identity Lo ke applies without difficulty to an atom of matter which being at a given instant what it is and nothing else is the same and so must continue as long as its existence is continued for so long it will be the same and no other In like manner if two or more atoms be joined together into the same mass every one of those atoms will be the same by the fore oin rule and whilst they exist united together the mass consisting of the same atoms must be the same mass or the same body let the parts be ever so differently jumbled But Locke continues if one of these atoms be taken away or one new one added it is no longer the same mass or the same body

The problem of identity in living organisms Locke does not find so easy to solve In the state of living creatures he says their identity depends not on a mass of the same particles, but on something else For in them the variation of great parcels of matter alters not the identity an oak growing from a plant to a great tree and then lopped is still the same oak and a colt grown up to a horse sometimes fat sometimes lean is all the while the same horse though in both these cases there may be a manifest change of the parts so that truly they are not either of them the same masses of matter

The problem of the real identity or continu ty of living things through time and change is as we shall see presently only a special case of the larger problem of whether anythin, at all remains identical for more than an inst nt in the universal flux of thin,s But supposing that problem solved in favor of en-

during substances or things which somehow remain continuously the same while changing in this or that respect the point of Locke s observation about living things still holds for their identity does not seem to lie in the con tinuity or permanence of the matter—the particles—of which they are composed

The familiar riddle about the pipe—whether it is in any respect the same after it has its broken bowl replaced by a new one and then has a new stem added to the new bowl—may be propounded for living organisms But in their case Locke argues a principle of identity can be found A plant he says continues to be the same plant as long as it partakes of the same life though that life be communicated to new particles of matter vitally united to the living plant in a like continued organization con formable to that sort of plant

The principle he thinks applies to animals and men The case is not so much different in brutes but that anyone may hence see what makes an animal and continues it the same Something we have like this in machines and may serve to illustrate it For example what is a watch? It is plain it is nothing but a fit organization or construction of parts to a cer tain end which when a sufficient force is added to it it is capable to attain If we v ould sup pose this machine one continue l body all whose organized parts were repaired increased or diminished by a constant addition or separa tion of insensible parts with one common life we should have something very much like the body of an animal This also shows wherein the identity of the same man consists *viz* in nothing but a partic pation of the same con tinued life by constantly fleeing particles of matter in succession vitally united to the same organized body

IN THE CASE OF MAN however Locke thinks we must face the additional problem of per sonal identity What makes a man the same person from moment to moment sleeping and waking remembering or not remembering his past? In what d es the continuity of the s lf consist on the id ntity of which Locke insists is founded all the right and justice of reward and punishment ? H s answer seems to be that as a living org nism is dentical throughout one and the same life it is the continuity of the same consciousness which makes a man be himself to himself and establishes his personal identity

Whatever has the consciousness of present and past actions Locke writes is the same person to whom they both belong That with which the consciousness of this present thinking thing *can* join itself makes the same person and is one self with it and with nothing else If the same Socrates waking and sleeping do not partake of the same conscious ness Socrates waking and sleeping is not the same p rson And to punish Socrates waking for what sleeping Socrates thought and waking Socrates was never conscious of would be no more right than to punish one twin for what his brother twin did whereof he knew nothing because their outsides were so like that they could not be distinguished

William James also attributes the sense of personal identity to continuity of conscious ness but for him there till remains a problem of explaining that continuity In the flow of consciousness from moment to moment con tinuity he thinks makes us unite what dis similarity might otherwise separate similarity makes us unite what d scontinuity might hold apart The sense of our personal identity then is exactly like any one of our other per ceptions of sameness among phenomena It is a conclusion grounded either on the resemblance in a fundamental respect or on the continuity before the mind of the phenomena com pared

In his opinion *resemblance among the parts of a continuum* of feelings (especially bodily feelings) experienced along with things widely different in all other regards *thus constitutes the real and verifiable personal ident ty which we feel* There is no other identity than this in the stream of subjective consciousness Its parts differ but under all their differences they are knit in these two ways and if either v ay of knitting disappears the sense of unity dep rts If a man wakes up some f ne day unabl to re call any of his past experience so that he h s to learn his b ogr phy afresh he *f els* and he *says* that he is a changed person H diso ns his former me g ves himself a new name den t fies his present l fe w th noth ng from out of

the older time Such cases are not rare in mental pathology

In the tradition of the great books other solutions are offered to the problem of personal identity Kant thinks for example that a transcendental unity of apperception is nec essary to constitute in all possible phenom ena which may come together in our experi ence a connection of all these representations according to laws Unity of consciousness he writes would be impossible if the mind in the knowledge of the manifold could not become conscious of the identity of function by which it unites the manifold synthetically in one knowledge Therefore the original and neces sary consciousness of the identity of one s self is at the same time a consciousness of the equal ly necessary unity of the synthesis of all phenom ena according to concepts

Where Kant posits a transcendental ego to account for the experienced identity of the self other philosophers who hold one or an other theory of the soul as an imperishable sub stance or an unchanging principle seem to find no special subtleties in the problem of the identity of living organisms or persons So far as such theories bear upon that problem the consideration of them belongs to the chapter on SOUL Here we are concerned with the no tions of same and other as they apply to every thing in the universe Hence we must face all the problems of how two things can be the same not merely the problem of self sameness or the identity of a thing with itself

THE WORD IDENTICAL is sometimes used as a synonym for same as when we say that two things are identical in a certain respect But without the qualification expressed by in a certain respect it is seldom if ever said that two things are identical for if they can be dis criminated from one another in any respect at all they are two not one and therefore not identical This seems to be the sense of Leib nitz s principle of the identity of indiscernibles concurred in by all who understand identity as the self sameness of that which is one in num ber and existence A plurality of things involves a numerical diversity—each of the many being an *other* To this extent at least the tradit onal discussion of same and other tends to merge with matters discussed in the chapter on ONE AND MANY

For both Plato and Aristotle the relation between these two pairs—*one and many* and *same and other*—seems to be much closer In the comparison of two things Aristotle appears to treat sameness as a kind of oneness referring to the various ways in which two things can be one and the same Of sameness he says that it is a unity of the being either of more than one thing or of one thing when it is treated as more than one and of the one he says that to it belong the same and the like and the equal and to plurality belong the other and the unlike and the unequal

The enumeration he gives of kinds of unity seems to be paralleled by his enumeration of kinds of similitude As a thing may be one es sentially or one by accident so two things may be the same essentially or by accident Aris totle s statement that some things are one in number others in species others in genus others by analogy finds its counterpart in his statement that different is applied to those which though other are the same in some respect only not in number but either in species or in genus or by analogy

As indicated in the chapter on RELATION a distinction is traditionally made between re lationships which really exist among things apart from the mind and logical relationships which occur in thought alone This distinction seems to separate self sameness or identity from all relations of similitude which obtain between two things The relation signified by the term *the same* Aquinas says is a logical relat on only if it is taken in regard to absolutely the same thing because such a relation can exist only in a certain order observed by reason as regards the order of anything to itself The case is otherwise however when things are called the same not numerically but generi cally or specifically

Nevertheless identity seems to underlie all other relations of sameness for among things or ideas lacking identity no comparisons can be made Those who deny identity on the ground that everything is in flux nullify all further dis cussion of sameness The theory of a universal flux which Plato attributes to Heraclitus per mits noth ng ever to remain stationary or the

same for an instant and the professed Heraclitean Cratylus went even further according to Aristotle he criticized Heraclitus for saying that it is impossible to step twice into the same river for *he* thought one could not do it even once

In saying of men that they are *nothing but a bundle or collection of different perceptions* which succeed each other with an inconceivable rapidity and are in a perpetual flux and movement Hume does more than deny personal identity He affirms an utter diversity— as if there were no manner of relation at all—between distinct perceptions each of which is for him a distinct existence The opposite point of view affirms things which have an enduring existence and which can as Aristotle says of substances undergo change in many respects while remaining numerically one and the same

TIME AND CHANGE raise the question of how any one thing can be the same from moment to moment The question of how two things can be one and the same in any respect arises from the simple fact that at the instant of comparison they are two If they were the same only for the comparing mind then their sameness would be a logical and not a real relationship For two things to be the same in reality seems to imply that although two in number they are one in some respect To use Hegel s language there is identity in diversity or in the language of Aquinas a real community exists according to which some one thing is common to two

The problem of the sameness of two things can be stated in terms of the significance of what Hobbes Berkeley and Hume call common or general names Denying that such words as man or tree or stone express abstract or general ideas they seem to say that common names like these sign fy what is common to two or more individuals—whether things perceptions or ideas Those who like Aristotle Aquinas and Locke take general or common names to signify abstract ideas seem to say such ideas themselves signify that in reality two or more things have something in common Still another view is that apart from all individual things real universals exist as the objects of the mind s conceptions

If the latter alternative is chosen then two individuals—two men for example—may be thought alike only because both somehow resemble as Plotinus suggests the separate archetype Man What is common to the two men lies in a third and separate reality of which Plotinus says that it is present in multiplicity as if in multi impression from one seal But as Parmenides observes in Plato s dialogue of that name if a separate idea of Man is required to explain how two individuals are alike in being men then still another idea is needed to account for the likeness between each individual man and the idea Man

On the other hand the view that the real sameness of two individuals or the reality of the one kind to which both belong resides in them—in their common possession of the same nature quality or other attribute—seems to lead to the difficulty already intimated namely the difficulty of understanding how distinct existences can have anything in common—how they can be two in number and yet also one in nature If John and James are alike as men because they share a common humanity then can it be said that each has *his own* human nature? If their natures and properties are as individual as their existences how can two things be *really the same* in any respect? Must not kinds or universals—or whatever is supposed to be common to many and the source of their sameness—exist only in the general meaning of words or in the mind s abstract concepts or as separate archetypes? But then what truth is there in the familiar statement that two individual things are in some respect *really* alike or the same?

THESE QUESTIONS indicate that the traditional discussion of the *same and the other* tends to involve not merely the theory of the one and the many but also in certain issues at least the problem of the individual and the universal As the chapter on UNIVERSAL AND PARTICULAR shows the several positions traditionally take with regard to universals afford differ [illegible] swers to the problem of how any same[illegible] tween two or more things exists [illegible] similitude in knowledge (the natu[illegible] n ss b twe n mag o s lea and [illegible] the fun t on of s militude [illegible]

tion or repulsion of like by like) also extend the consideration of sameness and diversity into the field of problems dealt with in other chapters Here attention must be given to the meaning of sameness itself as that is affected by the distinction between the same and the similar by the enumeration of various kinds or degrees of likeness and by the range of opposite meanings in the notions of diversity and difference

Discussing discrimination and comparison William James for example draws a sharp line between the simple and complex components of our experience Simple impressions he seems to think are either absolutely alike or absolutely unlike Here there can be no degrees of resemblance or similarity Two resembling things he writes owe their resemblance to their absolute identity in respect to some attribute or attributes combined with the absolute non identity of the rest of their being This which may be true of compound things breaks down when we come to simple impressions The latter apart from their numerical non identity or otherness are either the same in quality or diverse But compound things may be more or less alike varying in degree of similarity or difference according to the number of simple respects in which they are or are not the same

Similarity in compounds says James is partial identity and he gives the following illustrations The moon is similar to a gas jet it is also similar to a foot ball but a gas jet and a foot ball are not similar to each other Moon and gas jet are similar in respect of luminosity and nothing else moon and foot ball in respect of rotundity and nothing else Foot ball and gas jet are in no respect similar—that is they possess no common point no identical attribute

Other writers seem to agree on this distinction between the same and the similar the diverse and the different The latter in both cases combine elements of sameness and diversity to give degrees of likeness Aquinas for example says that we seek for difference where we also find resemblance For this reason things which differ must in some way be composite since they differ in some respect and in some respect they resemble each other In this sense although all things that differ are divers yet all things that are diverse do not differ For simple things are diverse through themselves and do not differ from one another by differences as their components For instance a man and an ass differ by the difference of rational and irrational but we cannot say that these again differ by some further difference

The specific difference between man and ass with respect to rationality accompanied by their generic sameness with respect to animality makes them similar If they were utterly diverse *i e* the same in no respect they would not be said to differ just as if they were identical in all respects except number they would not be called similar The other and the same writes Aristotle are thus opposed But difference is not the same as otherness For the other and that which it is other than need not be other in some definite respect but that which is different is different from some particular thing in some particular respect so that there must be something identical by which they differ

But within the area of this agreement on fundamental terms there seems to be some disagreement about whether two things can be utterly diverse Since they are two they cannot be the same in *all* respects—certainly not in number—but can they be totally incomparable? James appears to say Yes in his remark about the football and the gas jet having no common point no identical attribute Yet he also seems to hold that no two things are ever absolutely incomparable They may not differ or be similar as the diverse species of the same genus *e g* man and ass but regarding them as thinkables or existents he writes even the smoke of a cigarette and the worth of a dollar bill are comparable—still more so as perishables or as enjoyables The gas jet and the football would appear to be comparable also as existents or usables —or even perhaps as bodies

The question thus arises whether—all things being somehow comparable—they are all the same in genus as for example all three-dimensional material things may be said to belong to the genus body no matter how much else they differ as species or subordinate kinds within this genus Kant answers this question by affirming a principle of ultimate homogeneous

ness According to this principle there are no different original and first *generi* as it were isolated and separated from each other but all diverse *genera* are divisions only of one supreme and general *genus* Kant states a correlative principle of variety or specification according to which every *genus* requires *species* and these again *sub species* and as none even of these *sub-species* is without a sphere reason in its utmost extension requires that no species or sub species should in itself be considered as the lowest

Aristotle s theory of species and genera appears to be exactly opposite to Kant s on both points For Aristotle there is no single all embracing genus but rather a number of diverse yet supreme genera such as substance quantity quality etc There is a finite not an infinite variety of species The lowest species is further d visible only into kinds which differ as ind viduals of the same species do in accidental not essential respects *e g* white man and red man differ in the same way as John and James do within the species man not as the species man and ass differ within the genus animal Furthermore where Kant insists upon a third principle of continuity according to which between any tv o species there alv ays remain possible intermediate species differing from the first and the second by smaller degrees than those by which these differ from each other Aristotle seems to find no intermediates possible between the contrary species of a single genus The order of species is for him a discontinuous series like the order of the whole numbers between proximate members of which no fractions are admitted

Does Aristotle s position with respect to the *heterogeneity* of an animal and the color blue—the one in the genus substance the other in the genus quality —mean that such th ngs *absolutely diverse in genus* are absolutely incomparable? His answer seems to be twofold In one place he says that things which are diverse in genus m y still be the s me by analogy th ngs that are one by analogy are not all one in genus In another he gives us an example of analogical resemblance (betv een the soul and the hand) As the hand is a tool of tools so the m nd is the form of forms and sense the form of sensible things

If the example seems inappropriate on the ground that the soul and the hand are of the same genus *i e* both substances or parts of the same sub tance *man* it may be necessary to introduce the distinction between natural and logical genera According to this distinction a material and a spiritual substance can both be called substances as a matter of logical classification but they are not in the same genus by their own natures In this sense Aquinas assigns a geometrical solid and a physical body to the same logical genus body but regards them as of heterogeneous natures and Descartes calling an extended and a thinking substance both substances insists upon the utter diversity of their natures

An easier example however may not be too difficult to find A man and a number belong to different genera according to Aristotle—one a substance the other a quantity But the man can be related to his sons as the number *one* is related to any other whole number The relation which is the same in both cases is that of priority according to which the man and unity are the principles or generators respectively of his sons and other numbers Here then we see two heterogeneous thin s—a substance and a quantity—wh ch are nevertheless the same by analogy *each standing to another in the same relat onship* both therefore can be called principle or generator analogically

Aristotle s other indication that a special mode of similitude obtains betv een heterogeneous things occurs in all those passages in which he says that terms like being can be predicated of things in every category or genus Just as James seems to think that any two things may be comparable as thinkables or existents so Aristotle seems to hold that all things though otherwise heterogeneous are at l ast alike in *being i e* n having some mode of existence Yet the term being cannot be equated with Kant s sin le sup eme genus Though Aristotle agrees with Kant that every genus must be capable of division into species he does not think that being can be so div d d by specific differences

TWO POINTS MUST be observed o ce n ng Aristotle s th ory of tl e pred cation of t rm like be ng of ev ryth ng n th un v rse

First he repeatedly asserts that being is not said *in the same sense* of substances quantities qualities and so forth Hence when such heterogeneous things are all called beings the implication cannot be that as beings they are all the *same* The point seems to be that they are somehow *at once both the same and diverse* As to use an example from Aristotle s *Physics* a tone and a taste can both be sharp though the sharpness of a tone is as diverse from the sharpness of a taste as tone and taste are qualitatively diverse from each other so a man and a number can both have being though their modes of being are as diverse as substance is from quantity If the word similarity were to be used to signify not the combination of separable elements of sameness and diversity but rather the inseparable fusion of the two to constitute a *diversified sameness* then heterogeneous things should be called *similar* not the same in being

Second Aristotle does not identify such similarity of heterogeneous things with the sameness by analogy which heterogeneous things can have Being is not a relative term and therefore it cannot be predicated analogically as principle or generator can be Terms which are predicated analogically as principle can be predicated of a father and the number one may signify *similarity* (in the sense of *diversified sameness*) rather than simple sameness in a single respect The relation of generation which creates the analogical similitude between a father and the number one seems to be the same relation in the two cases (between a father and his sons and between one and other numbers) it is not however simply the same for that relation is diversified according as the things related—substances in the one case quantities in the other—are absolutely diverse in genus But in Aristotle s analysis it does not follow that because some analogical predicates signify *diversified* rather than *simple* sameness all do or that because some instances of *diversified sameness* happen to be analogical (*i e* sameness in a relation) all are

The interest in Aristotle s separation of these two points lies in the fact that Aquinas combines them in a theory which states that when being and other terms (which are not genera and yet are above all genera) are predicated of heterogeneous things they must be predicated analogically of them The existence which is found in all things he says is common to all only according to some sort of analogy not according to the same specific or generic formality This is most easily seen in the likeness of creatures to God which is solely according to analogy inasmuch as God is essential being whereas other things are beings by participation

Aristotle s statement that things which are one by analogy are not all one in genus seems to be converted by Aquinas into the proposition that *things which are not one in genus and yet are alike in some way are all one by analogy* For Aristotle sameness by analogy may be either simple sameness or diversified sameness (*i e* similarity) and diversified sameness may or may not be analogical that is it may be the kind of similarity which two heterogeneous things have in respect to being or in respect to some relation in which they stand to other things For Aquinas on the other hand whenever heterogeneous things are the same in any single respect their diversified sameness is *always analogical* and whenever the similitude between two things is truly analogical then it is *always similarity* that is a diversified not a simple sameness Likeness in being according to Aquinas affords us the prime example of a similitude which is at once an analogical and a diversified sameness

Aquinas applies his theory of the analogy of being to the great traditional issue which puts all theories of similitude to the test—the question of the resemblance between God and creatures or between infinite and finite being Against the answer first given by Maimonides, and later expressed by Spinoza when of all comparisons between God and man he says that His essence could resemble ours in nothing except in name and against those on the other hand who think that whatever names apply to both God and creatures (such as being or good or one) apply simply in the *same* sense Aquinas seems to take the middle ground The names which are properly applicable to both God and creatures according to him are said of them not equivocally and not univocally but analogically

This threefold distinction of univocal equiv

ocal and analogical names especially as it concerns the names of God is discussed in the chapter on SIGN AND SYMBOL. The theological problem of the similitude between God and creatures confronts us with three basic alternatives in man s speculation about the sameness and diversity which exists among all things We can say (1) that infinite and finite being are utterly diverse and have no similarity *even* in being We can say (2) that they are homogeneous—that with respect to being for example they have the kind of sameness which things have when they belong to the same genus Or we can say (3) that they are only similar in the sense of a diversified sameness whether such similarity is or is not always analogical in character

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and pa e numbers of the passages referred to For example in 4 Ho ier *Iliad* BK II [265 283] 12d the number 4 is the number of the volume in the set the number 12d indicates that the pas sage is in section d of page 12

PAGE SECTIONS When the text is printed in one column the letters a and b refer to the upper and lo ver halves of the page For example in 53 JA IES *Psychology* 116a 119b the passa e begins in the upper half of page 116 and ends in the lo ver half of page 119 When the text is printed in two columns the letters a and b refer to th upper and lo er halves of the left hand side of the page the letters c and d to the upper and lower halves of the right hand side of the page For example in 7 PLATO *Symposium* 163b 164c the passage beg ns in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164

AUTHOR S DIVISIONS One or more of the main divisions of a work (such as PART BK CH SECT) are sometimes included in the reference line numbers in brackets are given in cer tain cases *e g* *Iliad* BK II [265 283] 12d

Chapter 83 SCIENCE

INTRODUCTION

IN our time science philosophy and religion have come to represent three quite distinct intellectual enterprises Each appeals for allegiance not merely on the ground that it can answer fundamental questions but also because of its contribution to human life and culture In other periods philosophy and religion competed for supremacy though as appears in the chapter on PHILOSOPHY some philosophers and theologians tried to remove this conflict by arguing for the complete compatibility of reason and faith Nevertheless before the 19th century the issue if one existed was between philosophy and religion Science had not yet become sufficiently distinct from philosophy to complicate the picture

When science and philosophy are not themselves sharply distinguished men are not confronted with three separate claims upon their intellectual allegiance Modern science as something quite distinct in method and subject matter from traditional philosophy may actually make its appearance as early as the 17th century But not until Kant are two kinds of science plainly set apart Not until then are they so defined that one becomes identified with what men have al ays called philosophy and the other gradually appropriates the name of science and regards itself as a quite separa e enterprise

Kant differentiates between the empirical and the rational sciences This differentiation tends to correspond with the distinction by otl ers before him of experimental and abstract pl ilosophy It also corresponds with a later d vision into the experimental or inductive and tl e philosophical or deductive sciences But Kant does not seem to contemplate the possibility of conflict between science and philosophy—between the experimental study of nature and metaphysics or what is for him the same between empirical and rational physics

Hume is willing to admit only mathematics to the status of a rational science capable of demonstrating its conclusions with certainty He insists upon experimental reasoning in the study of nature wherein only probable conclusions can be attained But he does not make these critical points in terms of science versus philosophy If the traditional metaphysics is to be rejected it is not because it is philosophy rather than science but because it represents a failure in philosophy *or* science resulting from the wrong method of dealing with matters of fact

In the 19th century however Auguste Comte formulates a doctrine which under the title of *Positive Philosophy* explicitly declares that only the positive sciences—the study of natural mental and social phenomena by empirical methods—deserve to be called sciences in the eulogistic sense of that term In contrast philosophy is mere speculation and religion is superstition The word speculation is for the positivist only slightly less invidious than superstition Whereas superstition implies irrational belief speculation represents a futile attempt by reason to go behind the phenomena in order to discover ultimate causes or substances This cannot result in anything but guesswork or conjecture—never in knowledge or science which are the same for the positivist For all its sho v of logic and system philosophy cannot produce conclusions which have the validity or objectivity of science because it tries to do more than explore and describe the phenomena and because it tries to do whatever it does without investigation or experiment

From many sources in addition to Comte similar views converge to form an attitude generally prevalent in the world today under the name of positivism All its current varieties

seem to have this much in common the identification of science with knowledge of fact and further the restriction of such knowledge to conclusions obtained and verified empirically Whatever does not accord with this conception of science is either like mathematics or logic a purely formal discipline or like philosophy and religion it is conjecture opinion or belief—personal subjective even wishful

IT SEEMS APPROPRIATE that the most recent author in the set of great books should provide us with a declaration of positivism and that he should set science against philosophy and religion It is also fitting that he should be a scientist in the field of psychology since psychology is a late comer among the disciplines which once branches of philosophy now claim to be positive sciences Not only late but last according to Freud for sociology which deals with the behavior of man in society can be nothing other than applied psychology Strictly speaking indeed there are only two sciences—psychology pure and applied and natural science

In his *New Introductory Lectures on Psycho Analysis* Freud concludes with a statement of what he calls the scientific *Weltanschauung* In essence he thinks it asserts that there is no other source of knowledge of the universe but the intellectual manipulation of carefully verified observations in fact what is called research and that no knowledge can be obtained from revelation intuition or inspiration Freud makes the drastic implications of this statement quite explicit It is inadmissible to declare he writes that science is one field of human intellectual activity and that religion and philosophy are others at least as valuable and that science has no business to interfere with the other two that they all have an equal claim *to truth and that everyone is free to* choose whence he shall draw his convictions and in which he shall place his belief

Such an attitude he goes on is considered particularly respectable tolerant broad minded and free from narrow prejudices Unfortunately it is not tenable it shares all the pernicious qualities of an entirely unscientific *Weltanschauung* and in practice comes to much the same thing The bare fact is that truth can not be tolerant and cannot admit compromise or limitations that scientific research looks on the whole field of human activity as its own and must adopt an uncompromisingly critical attitude towards any other power that seeks to usurp any part of its province

As a threat to the dominion of science over man and society religion alone is a really serious enemy Philosophy Freud thinks, has no immediate influence on the great majority of mankind whereas religion is a tremendous force which exerts its power over the strongest emotions of human beings Religion and science might be compatible if religion offering men something incomparably more beautiful more comforting and more ennobling than anything they could ever get from science would only say It is a fact that I cannot give you what men commonly call truth to obtain that you must go to science

But religion cannot say that Freud thinks without losing all influence over the mass of mankind and science cannot on its side yield at all in its claim to being the *only* avenue to truth Employing a method which carefully examines the trustworthiness of the sense perceptions on which it bases its conclusions which provides itself with new perceptions not obtainable by everyday means and which isolates the determinants of these new experiences by purposely varied experimentation science alone can arrive at correspondence with reality It is this correspondence with the real external world we call truth and thus when religion claims that it can take the place of science and that because it is beneficent and ennobling it must therefore be true that claim is in fact an encroachment which in the interests of everyone should be resisted

Philosophy does not seem to Freud to offer men a genuine alternative to scientific truth *Unlike religion it is not in his view necessarily* opposed to science at times it even behaves as if it were a science and to some extent makes use of the same methods But insofar as it parts company with science by clinging to the illusion that it can produce a complete and coherent picture of the universe philosophy must be regarded as an impostor in the halls of knowledge

Th p tu ph losophy tries to construct Freud say mu t ne ds fall to p eces with

every new advance in our knowledge Not it self knowledge but mere opinion or specula tion philosophy does not any more than reli gion offer a substitute for science Both together fall under Freud s interdict Both together would be outcasts from human culture if what he calls our best hope for the future that is the intellect—the scientific spirit rea son—should in time establish a dictatorship over the human mind

WILLIAM JAMES ALMOST contemporary with Freud also draws a sharp line between science and philosophy Writing his *Principles of Psychology* at a time when the experimental methods of the natural sciences especially physiology have just been introduced into the study of mental phenomena he is at pains to define the scope of psychology as a natural sci ence and to separate the questions which can be properly considered by a scientist from those which belong to the philosopher But unlike Freud James does not seem to regard the phi losopher as engaged in a futile effort to solve problems which are either insoluble or better left until science finds means for solving them

For James the distinction between science and philosophy does not seem to lie only in the methods they employ though the empirical or experimental approach does have a bearing on the kind of problems scientists can undertake to solve and the conclusions they can reach The problems and the conclusions are them selves characteristically different from those of the philosopher

The scientist *describes* the phenomena ac cording to James as precisely as possible and as comprehensively but without any implication of finality or totality He recognizes that his de scriptive formulations are tentative and incom plete always subject to the discovery of new data or a more refined presentation of the evi dence Above all he admits that he is only de scribing not *expla n ng*—not laying bare the ultimate real ty wl ich gives the phenomena their deepest intell ibility or ascertaining the causes wl ich show why not merely how things happen as they do

In the I reface to his *Principles* James says that l e has kept close to the point of view of natural science throughout the book This book assuming that thoughts and feelings exist and are vehicles of knowledge thereupon con tends that psychology when she has ascer tained the empirical correlation of the various sorts of thought or feeling with definite condi tions of the brain can go no farther—can go no farther that is as a natural science If she goes farther she becomes metaphysical All attempts to *explain* our phenomenally given thoughts as products of deeper lying entities are meta physical

This scientific point of view James admits is anything but ultimate The data assumed by psychology just like those assumed by physics must sometime be overhauled The effort to overhaul them clearly and thoroughly is metaphysics James does not imply that metaphysics cannot perform her task well but he does think that she spoils two good things when she injects herself into a natural science

Science and metaphysics should be kept quite separate even though the sciences in accumulating a mass of descriptive details, run into queries which only a metaphysics alive to the weight of her task can hope successfully to deal with That will perhaps be centu ries hence and meanwhile the best mark of health that a science can show is this unfinished seeming front

The variance of James conception of meta physics and its future from other traditional views on that subject is discussed in the chapter on METAPHYSICS Here it is relevant to observe that James has a conception of science broad enough to include both the empirical natural sciences and what he calls the pure or *a priori* sciences of Classification Logic and Mathe matics Yet in his view metaphysics does rep resent philosophy as opposed to science be cause it aims at ultimate reality or underlyi g causes For example he rejects the theory of a soul not because he knows it to be false but because he thinks it has no place in a psychol o_gy which contents itself with verifiable laws and which is to remain positivistic and non metaphysical

James seems to embrace the positivist view preval nt in the 19th century and our own day He limits science to as ell as excludes philosophy from the domain of empirical

knowledge In discussing the possibility of free will he says that Psychology will be Psy chology and Science Science as much as ever (as much and no more) in this world whether free will be true in it or not Science however must be constantly reminded that her pur poses are not the only purposes and that the order of uniform causation which she has use for and is therefore right in postulating may be enveloped in a wider order in which she has no claims at all

THOSE MODERN SCIENTISTS and philosophers who do not make a sharp distinction between science and philosophy and who antedate any explicit formulation of the positivist doctrine nevertheless do for the most part conceive natural science as experimental in its method and as having for its goal the formulation of general laws describing and correlating the phenomena They do not all exclude causes from the consideration of the natural scientist nor do they all as stringently as James rule out explanation in favor of description or correla t on Furthermore the almost universal em phasis by modern writers upon the experimen tal character of the natural sciences does not mean a universal identification of science with the experimental disciplines

Mathematics for example is usually re garded as a science in spite of its being non experimental For Locke and Hume as well as for Descartes it exhibits certain characteristics —the self evidence of principles the certainty of demonstrations—which make it more genu inely worthy of the high name of science than are the tentative hypotheses and probable con clusions of experimental physics Other disci plines are called sciences by comparison with mathematics rather than physics Descartes for instance seems to think that metaphys ics can as surely be made a science as mathe-matics can be Locke argues that demonstration from axioms is not limited to the science of quantity As much clarity and certainty is at tainable in reasoning about moral matters Ethics is no less a science than mathematics

Hobbes appears to take a similar view of poli tics though it must be noted in his case that he d ffers from D sca tes and Locke from Bacon Hume and others in not d stinguishing mathe matics from physics with respect to the latter s need for experimental evidence All the sciences are for him alike in being the demonstrations of consequences of one affirmation to another regardless of the diversity of the matter The certain and infallible sign that a man is a sci entist in any field of subject matter is that he can demonstrate the truth thereof perspicu ously to another

Hobbes furthermore seems to think that what is true of geometry is true of every science namely that it must begin with defini tions In geometry he says men begin at settling the signification of their words which settling of significations they call *definitions* Without definitions science is impossible In the right definition of names Hobbes main tains lies the first use of speech which is the acquisition of science and in the wrong or no definitions lies the first abuse from which pro ceed all false or senseless tenets

Freud expresses the opposite view which is generally more characteristic of the attitude of the modern scientist especially the experimen talist or empiricist in method The view is often defended he writes that sciences should be built on clear and sharply defined basal concepts But in actual fact no science not even the most exact begins with such definitions The true beginning of scientific activity Freud holds consists rather in de scribing phenomena and then proceeding to group classify and correlate them Even at the stage of description it is not possible to avoid applying certain abstract ideas to the material in hand ideas derived from various sources and certainly not the fruit of new experience only

They must at first necessarily possess some measure of uncertainty there can be no ques tion of any clear limitation of their content So long as they remain in th s condition we come to an understanding about their meaning by repeated references to the material of ob servation from which we seem to have deduced our abstract ideas but which is in point of fact subject to them

The basic concepts or definit ons of a sc nc are according to Freud in the nature of con ventions although he adds ev rything de-pends on their being chosen n no arb trary manner but dete mined by the important

relations they have to the empirical material

It is only after more searching investigation of the field in question that we are able to formulate with increased clarity the scientific concepts underlying it Then indeed it may be time to immure them in definitions The progress of science however demands a certain elasticity even in these definitions This may not be true of mathematical concepts or definitions but Freud points out the science of physics illustrates the way in which even those basal concepts that are firmly established in the form of definitions are constantly being altered in their content

WITH THE EXCEPTION OF HOBBES the notion that scientific conclusions can be drawn from definitions or can be established without recourse to experiment is not usually extended by modern writers from mathematics and metaphysics to physics As the chapter on PHYSICS shows the basic division of the study of nature into philosophical and scientific physics becomes equivalent in modern times to a separation of the philosophy of nature from the experimental natural sciences We shall return presently to that sense of science in which physics is associated with mathematics and metaphysics as a branch of theoretic philosophy or as one of the speculative sciences All three disciplines are thought of as proceeding in the same way by the demonstration of conclusions from principles obtained by induction from experience—ordinary sense experience that is not the special experiences artificially contrived in a laboratory under experimental conditions But it should be observed that in the modern period even those authors who use science in the foregoing sense when they discuss mathematics and metaphysics treat physics differently They hold that physics must be experimental if it is to be scientific

In proportion as modern physics becomes more and more the model of science the meaning of the word science tends to become reserved for experimental study or at least for empirical investigation so that non experimental disciplines like metaphysics or ethics are questioned when they call themselves sciences Other disciplines try to establish themselves as sciences by imitating physics Marx for example in presenting his own work as economic *science* seeks to explain how it can be scientific even if it is not experimental

The physicist he writes either observes physical phenomena where they occur in their most typical form and most free from disturbing influence or wherever possible he makes experiments under conditions that assure the occurrence of the phenomenon in its normality If experiment in the strict sense is impossible in economics at least the student of economics can be scientific in his effort to observe the phenomena in their most typical form. England Marx thinks offers the most typical example of the capitalist mode of production and the conditions of production and exchange corresponding to that mode Hence for scientific purposes he has used England as the chief illustration in the development of [his] theoretical ideas

THE EXPERIMENTAL CHARACTER of modern physics whether it is called natural science or natural philosophy is discussed in the chapter on PHYSICS The distinction between the construction or use of experiments and the appeal to experience—apart from experiment—either as a source or as a test of scientific formulations, is discussed in the chapter on EXPERIENCE as well as in the chapters on HYPOTHESIS and INDUCTION Here it seems pertinent to note that neither the distinction between induction and deduction nor the distinction between hypotheses and axioms unequivocally marks the line which separates science from philosophy

Aristotle and Bacon for example regard induction as the source of axioms in metaphysics or *philosophia prima* as well as in physics or the philosophy of nature They may have different theories of induction but only insofar as one conceives induction as an intuitive generalization from *ordinary sense-experience* and the other makes induction an inference from *experiments* does the difference between them seem to have a bearing on the distinction between philosophy and science

Similarly the difference between the scientist s and the philosopher s consideration of hypotheses seems to lie not in the role they play in reasoning or argument but rather in their having or not having a special relation to experi

mentation either to guide it or to submit to its test

Experiment then seems to be the distin guishin, mark of science on the side of method and by an extension of meaning even in those subject matters where experiments in the strict sense—in laboratories with apparatus under controlled conditions—are impossible the sci entist differs from the philosopher in an analogous point of method The scientist investigates does research makes observations which go be yond the experiences which ordinary men have in the course of daily life

It seems to be in this spirit that Newton opens the *Optics* with the statement that my design in this book is not to explain the proper ties of light by hypotheses but to propose and prove them by reason and experiments In the same spirit Faraday says of himself As an ex perimentalist I feel bound to let experiment guide me into any train of thought which it may justify being satisfied that experiment like analysis must lead to strict truth if rightly interpreted and believing also that it is in its nature far more suggestive of new trains of thought and new conditions of natural power

Lavoisier imposes upon himself the rule never to form any conclusion which is not an immediate consequence necessarily flowing from observation and experiment Gilbert criticizes those who write about magneti m without recourse to experiments—philosophers who are not themselves investigators and have no first hand acquaintance with things Refer rin, to what has been held by the vulgar and by tradition concerning the motion of the heart and arteries Harvey proposes to separate true from false opinions by dissection multi plied experience and accurate observation

Even a scientist like Fourier who conceives physical theory as a kind of applied mathemat ics says that no considerable progress can here after be made wh ch is not founded on experi ments for mathematical analysis can deduce from general and simple phenomena the expres sion of the laws of nature but the special appli cation of these laws to very compl x effects de mands a long series of exact observations L ke Fourier Galileo also combines mathematics and experiment in the study of nature But though he is willing to introduce exper ments whe e they are necessary in order to test rival hypotheses or alternative mathematical formulations of the laws of motion he seems to express a preference for the rigor of purely mathematical physics

In the Fourth Day of the *Two New Sciences* discussing the parabolic path of projectiles one person in the dialogue Sagredo says that the force of rigid demonstrations such as occur only in mathematics fills me with wonder and de light The understanding thus derived he adds far outweighs the mere information ob tained by the testimony of others or even by repeated experiment Agreeing with this Salviati another person in the dialogue claims that the knowledge of a single fact acquired through a discovery of its causes prepares the mind to understand and ascertain other facts without need of recourse to experiment pre cisely as in the present case where by argumen tation alone the Author proves with certainty that the maximum range occurs when the ele vation is 45 He thus demonstrates what has perhaps never been observed in experience namely that of other shots those which exceed or fall short of 45 by equal amounts have equal ranges

THE CONCEPTION OF SCIENCE as consisting in a rigorous demonstration of conclusions from axi oms—whether in mathematics or other subject matters—seems to be modern as well as ancient It is found in Descartes and Spinoza in Hobbes and Locke as well as in Plato and Aristotle Holding that science in its entirety is true and evident cognition Descartes may add that it has been mathematicians alone who have been able to succeed in making any demonstrations that is to say producing reasons which are evi dent and certain yet he also hopes to make metaphysics a science after the model of mathe matics

This conception of science is somewhat quali fied by Descartes when he discusses the study of nature Here he tends toward experimental ism Here he says that experime its become so much the more necessary the more one is ad vanced in knowledge Referring to pa t ula effects which might b deduced f om th principles in many d ff ent w y he thinks that the only vay to overcome the difficulty of discover ng the princ ples on which the effects

do depend is to try to find experiments of such a nature that their result is not the same if it has to be explained by one of the methods as it would be if explained by the other

On the other hand the conception of science as knowledge founded upon experiment or at least upon extended observation seems to be ancient as well as modern Aristotle criticizes those of his predecessors in physics whose explanation of the observations is not consistent with the observations The test of principles in the knowledge of nature he says is the unimpeachable evidence of the senses as to each fact It is for this reason that he praises the method of Democritus as scientific

Lack of experience Aristotle writes diminishes our power of taking a comprehensive view of the admitted facts Hence those who dwell in intimate association with nature and its phenomena grow more and more able to formulate as the foundations of their theories principles such as to admit of a wide and coherent development while those whom devotion to abstract discussions has rendered unobservant of the facts are too ready to dogmatize on the basis of a few observations The rival treatments of the subject now before us will serve to illustrate how great is the difference between a scientific and a dialectical method of inquiry For whereas the Platonists argue that there must be atomic magnitudes because otherwise The Triangle will be more than one Democritus would appear to have been convinced by arguments appropriate to the subject i e drawn from the science of nature

There are many passages in which Aristotle rejects an astronomical hypothesis because it does not account for the observations or favors one theory against all others because it alone seems to fit the sensible phenomena So too in his biological works he makes experience the test of theories Speaking of the generation of bees for example he says that if we ever learn the truth about this matter credit must be given to observation rather than to theories and to theories only if what they affirm agrees with the observed facts And in his treatise *On the Motion of Animals* he calls for reference to particulars in the world of sense for with these in view we seek general theories and with these we believe that general theories ought to harmonize

But Aristotle also defines science as the certain demonstration of universal and necessary conclusions from self evident principles Scientific knowledge he writes is judgment about things that are universal and necessary and the conclusions of demonstration follow from first principles (for scientific knowledge involves apprehension of a rational ground) The emphasis here is on knowledge of causes and on the certainty and necessity of conclusions which can be demonstrated from axiomatic truths.

By these criteria metaphysics and mathematics are in Aristotle s conception of the three philosophical sciences perfect examples of scientific knowledge physics as a general philosophy of nature is also scientific knowledge in this sense but the particular natural sciences such as astronomy or zoology are more empirical than philosophical in character At least they involve admixtures of demonstration from principles with the verification of hypotheses by observation To the extent that they are empirical they are qualified by an uncertainty and a tentativeness in formulation which do not seem to be present in Aristotle s conception of the purely philosophical sciences

It might even be said that the knowledge of nature which depends on empirical research is not strictly scientific at all Locke appears to say just that How far soever human industry may advance useful and experimental philosophy in physical things he writes scientifical will still be out of our reach Holding that our knowledge of bodies is to be improved only by experience Locke adds I deny not but a man accustomed to rational and regular experiments shall be able to see farther into the nature of bodies and guess righter at their yet unknown properties than one that is a stranger to them but yet as I have said this is but judgment and opinion not knowledge and certainty This way of getting and improving our knowledge in substances only by experience and history makes me suspect that natural philosophy is not capable of being made a science

WHETHER THE EXPERIMENTAL study of nature is the type of all scientific knowledge (in its object its method and the character of its conclusions) or whether according to another conception the philosophical disciplines are the

more perfect perhaps even the only examples of science there seems to be no question that different values attach to these two meanings of science—or as it is currently expressed to science and philosophy

The philosophical sciences may be either theoretic or practical according as they aim at wisdom or at action but they are seldom praised as being useful productively The practical sciences which are also traditionally regarded as branches of moral philosophy—such as ethics politics and economics—may be knowledge put to use in the guidance of individual conduct or the affairs of society but apart from poetics which may direct production in the sphere of the fine arts there does not seem to be any philosophical science or branch of philosophy that provides a mastery of matter or some control over nature None has applications in the sphere of the useful arts

As indicated in the chapters on ART KNOWLEDGE and PHILOSOPHY Bacon appears to take a contrary view Usin the word practical to mean productive rather than moral or civil he divides the philosophy of nature into speculative and practical branches He regards mechanics as the application of physics to useful purposes and finds a productive counterpart to metaphysics in what he calls magic

Nor is Bacon s point merely that the real and legitimate goal of the sciences is the endowment of human life with new inventions and riches in opposition to those whom he criticizes for thinking that the contemplation of truth is more dignified and exalted than any utility or extent of effects In addition he thinks that the truth of science can be tested by its productive utility That which is most useful in practice he writes is most correct in theory

Bacon s position with regard to the productive utility of science would not be contrary to the traditional view if by the philosophy of nature he meant science in the experimental rather than the philosophical sense His emphasis upon experimentation in all parts of the study of nature suggests that that is the case The fact that he places equal emphasis upon machinery and inventions and power over nature also suggests that technology is the other face of any science which is experimental in method

Bacon and Descartes seem to be the first to perceive that knowledge which is experimental in origin must be by its very nature capable of technological applications The instruments and apparatus which Bacon regards as necessary implements of science no less than the machinery and inventions which science can be expected to produce represent the very same techniques of operating upon nature Experimental science is thus seen to be at once the creature and creator of technology As Plato s *Republic* projects a society which cannot be realized unless it is ruled by the science of the philosopher so Bacon s *New Atlantis* prophesies a civilization which the dominance of experimentalism and technology have brought to present reality

Chapter 84 SENSE

INTRODUCTION

THE nature of sensation seems at first to be as obvious as its existence In the tradition of the great books there may be controversy concerning the existence of sense in plants as well as in animals and there may be controversy over the existence in man of faculties higher than sense But no one disputes that men and other animals are endowed with a power of sense

The extent of this power may be questioned but not the fact that animals and men when awake experience sensations or perceive through their senses Sleep according to Aristotle can occur only in those living things which have the power of sense perception If there be an animal not endowed with sense perception it is impossible that this should either sleep or wake since both these are affections of the activity of the primary faculty of sense perception

The existence of the sensible—of an external something which causes sensation and can be sensed—also seems to escape denial or dispute The existence of a purely intelligible reality—of a world of immaterial things incapable of being sensed—is subject to debate in all periods of western thought The sensible world is sometimes regarded as the only reality sometimes it is regarded as mere seeming or appearance in comparison with the reality of purely intelligible being Men may also differ on the question whether things possess sensible qualities when they are not being sensed But with few exceptions notably Berkeley and Hume the existence of a sensible world of material things is not denied or seriously doubted

The controversies and issues indicated above are for the most part discussed elsewhere The chapter on ANIMAL considers the sensitivity of plants. There also as well as in the chapters on MAN IDEA and MIND is considered the distinction between the senses and the higher faculties of reason or intellect The chapter on MEMORY AND IMAGINATION deals with these two functions in their relation to sense and sense perception and the contrast between sensible and intelligible reality is discussed in the chapters on BEING FORM IDEA and MATTER Some of these topics necessarily recur here especially as they bear on what for this chapter are the primary problems—the nature of sensation the analysis of the power of sense and the character of the knowledge which is afforded by the senses

AS WE HAVE ALREADY observed no difficulty seems to arise at first concerning the nature of sensation It is supposed by many inquirers early and late in the tradition that matter is sensitive as well as sensible Animals have sense organs which react to physical stimulation Bodies either act directly upon the sense organs as in the case of touch and taste or as in the case of vision hearing and smell they exert their influence through an intervening medium yet in a manner which seems to be no less the action and reaction of bodies

Those who distinguish between living organisms and inanimate bodies tend to regard sensitivity as a property of living matter but it does not follow for all who make this distinction that other than material factors are needed to explain sensation On the contrary some writers seem to think that the motions of matter account for sensation as readily as the laws of mechanics account for all the sensible changes we are able to perceive

Lucretius for example holds that living things consist of body and soul and that the soul (or mind) differs from the body only in the size the fineness of texture and the mobility of the material particles which compose it It

is he says by the common motions of the two —body and soul—that sensation is kin dled and fanned throughout our flesh Sensa tion occurs when the particles of body and soul together are set in motion by the impact of external bodies upon the organs of sense When the pupil of the eye receives in itself a certain kind of blow it is said to perceive white color and another again when it perceives black Similarly every kind of sound and voice is heard when they have found their way into the ears and struck upon the sense with their body for that voice too and sound are bodily you must grant since they can strike on the senses

Either the external body itself as in touch strikes the sense and sets up those bodily mo- tions in the animal which are sensation or ac cord ng to Lucretius minute replicas or images —composed of atoms as all things are—fly off from the surface of distant bodies and enter through the pores of our sense organs to awaken in us vision hearing or smell In either case sensation is a bodily reaction and for Lucretius imag nation and memory even thought are consequent motions in the atoms of the mind —further bodily reverberations as it were of sensat on

The cause of sense writes Hobbes is the external body or object which presses the organ proper to each sense either immediately as in taste and touch or mediately as in seeing hearin, and smellin which pressure by the mediat on of ne ves and other strings and membranes of the body continues inwards to the brain and heart causes there a resistance or counter pressure or endeavor of the heart to deliver itself which endeavor because outward seems to be some matter without And this *s em ng* or *fancy* is that wh ch men call *sense*

The object seems to be colored or hot or sweet when it causes certain sensat ons in us which are projected outward upon it in re sponse or counter action to the nward motions it sets up But says Hobbes these sensible quali ties are in the object nothing but so many several motions of the matter by whi h it presses our organs d versely Neither in us that are pressed are they anything else but diverse motions (for mot on produces noth ng but motion)

THE FOREGOING THEORY reducing sensation to bodily motion seems to draw its cogency from the fact that only bodies are sensible that sense organs are bodily parts and that sense organs must be activated by some sort of physi cal contact for sensations to occur Some writers like Descartes accept the theory for animals but reject it for men or they distin guish in the case of men between thought and sensation They regard sensation with its sub sidiary functions of memory and imagination as reducible to corporeal motions but refuse to grant that external sense-impressions or in terior fancy can produce knowledge without the activity of an immaterial soul

To animals Descartes declares we can ascribe no knowledge at all but only fancy of a purely corporeal kind In contrast that power by which we are said to know things is purely spiritual and not less distinct from every part of the body than blood from bone or hand from eye In men as well as animals the ex ternal senses in so far as they are part of the body perceive in virtue of passivity alone just in the way that wax receives an impression from a seal Fancy or imagination is also a genuine part of the body and memory at least that which is corporeal and similar to that of the brutes is in no respect distinct from imagination

These corporeal faculties are according to Descartes of use to the understanding or the mind only when it proposes to examine some thing that can be referred to the body but if it deal with matters in which there is nothing corporeal or similar to the corporeal it cannot be helped by those faculties Hence for Des cartes the mind can act independently of the brain for certa nly the brain can be of no use in pure thought its only use is for imag ning and perceiving

For others like William James the distinc tio i between sensation and thought so far as their relation to matter is concerned seems qu te untenable He objects to those who look upon sensational consc ousness as something *quasi* material hardly cognitive wh h on need not much wonder about wh le th y re gard rat onal con iou ness as qu t the re verse and th mystery of it [a] un peakable We can correlate consc ousness w th the brain s

workings only in an empirical fashion James thinks and we ought to confess that no glimmer of explanation of it is yet in sight That brains should give rise to a knowing consciousness at all this is the one mystery which returns no matter of what sort the consciousness or of what sort the knowledge may be Sensations aware of mere qualities involve the mystery as much as thoughts aware of complex systems involve it

Still others like Plotinus and Aristotle think that the mystery of conscious matter is not essentially different from the mystery of living matter for if there is anything mysterious about nutrition and growth or sensation and imagination it consists in the same thing—the union of material and immaterial principles of body and soul

If the soul were a corporeal entity Plotinus writes there could be no sense-perception no mental act no knowledge If the sentient be a material entity (as we are invited to believe) sensation could only be of the order of seal impressions struck by a ring on wax Perception is not a passively received impression It is according to Plotinus an act of awareness determined by the nature and character of the living being in which it occurs In any perception we attain by sight the object is grasped there where it lies in the direct line of vision The mind looks outward this is ample proof that it has taken and takes no inner imprint and does not see in virtue of some mark made upon it like that of the ring on the wax it need not look outward at all if even as it looked it already held the image of the object seeing by virtue of an impress on made upon itself

According to Aristotle two characteristic marks have above all others been recognized as distinguishing that which has soul in it from that which has not—self movement and sensation By self movement he appears to mean such things as the nutrition and growth which is found in plants, as well as the additional animal faculty of local motion Both self movement and sensation require soul as well as body Nothing grows or decays naturally he writes except what feeds itself and nothing feeds itself except what has a share of soul in it So too nothing except what has soul in it is capable of sensation But the exercise of sense-perception does not belong to soul or body exclusively Sensation is not an affection of the soul by itself nor has a soulless body the potentiality of perception

But Aristotle asks are all affections of the soul affections of the complex of body and soul or is there any one among them peculiar to the soul by itself? If we consider the majority of them there seems to be no case in which the soul can act or be acted upon without involving the body *e g* anger courage appetite and sensation generally Thinking seems to be the most probable exception but if this too proves to be a form of imagination or to be impossible without imagination it too requires a body as a condition of its existence

Aquinas tries to answer the question Aristotle asks with a threefold distinction which places sensation and imagination midway between the vegetative functions and rational thought The power of thought or the intellectual power Aquinas says does not belong to a corporeal organ as the power of seeing is the act of the eye for understanding is an act which cannot be performed by a corporeal organ like the act of seeing

At the other extreme from this operation of the soul which so far exceeds the corporeal nature that it is not even performed by any corporeal organ are those operations of the soul performed by a corporeal organ and by virtue of a corporeal quality Because it is a kind of self movement digestion requires soul as well as body but it is a corporeal action in the way in which according to Aquinas it involves the action of heat Between these extremes, Aquinas places sensation and imagination operations performed through a corporeal organ but not through a corporeal quality

He explains this further by means of a distinction between natural and spiritual immutation—physical and psychic change Natural immutation takes place by the form of the thing which causes the immutation being received according to its natural existence into the thing in which the immutation is effected as heat is received into the heated thing Vegetative activities while remaining psychic in the sense of occurring only in living or be-

souled matter involve only natural immutations in the vital organs involved

In contrast spiritual immutation takes place by the form of the thing causing the immutation being received according to a spiritual mode of existence into the thing in which the immutation is effected as the form of color is received into the eye which does not thereby become colored Though some sensations may require a natural immutation of the sense organ as hot and cold do all sensations necessarily involve a spiritual immutation which enables the sense-organ to perform its proper act of knowing as the eye knows color without becoming colored Otherwise Aquinas says if a natural immutation alone sufficed for the sense s action all natural bodies would feel when they undergo alteration

THESE DIVERSE VIEWS of the nature of sensation seem to be paralleled by diverse views of the sensitive faculty That the function of the senses is somehow to apprehend or know does not seem to be disputed But whether the senses—including memory and imagination—are the only faculty of knowing is an issue to which the great books seem to give a variety of answers

The opposite answers appear to be correlated not only with conflicting positions in respect to body and soul but also with opposing theories of the distinction between men and other animals Those who hold that the motions of matter are adequate to explain the phenomena of knowing and thinking tend to make sense perception the primary function of the mind and to treat not only memory and imagination but also reasoning or thought as subsequent activities of the same general faculty which receives impress ons from external sources in the first instance Since other animals possess senses and give evidence that perception in the n has consequences for memory and imag inat on tho e who hold this view also tend to attribute thought to animals and to regard man as d ffering from them only in degree

Those who take the contrary view that knowing involves an immaterial principle or cause—a soul as well as a body—tend to distinguish the various functions of sense from the activities of thought—such as conception judgment and reasoning They also take the position that man while sharing sense perception memory and imagination with other animals alone possesses the higher faculty The difference between men and brutes is thus conceived as one of kind not of degree when the difference between the senses and the reason in man is also conceived as a difference in kind A functional relationship between sensation and thought is not thereby denied but a distinct faculty is affirmed to be necessary for going beyond the apprehen ion of particulars to knowledge of the universal or for rising above the imagination to abstract thought

The distinction between sense and reason as faculties of knowing is sometimes stated in terms of a difference in their objects—the particular versus the universal becoming versus being the material versus the immaterial Sometimes it is stated in terms of the difference between a corporeal power requiring a bodily organ and a spiritual power which belongs exclusively to the soul Sometimes it is stated in terms of the contrast between sense as intuitive and reason as discursive the one beholding its objects immediately the other forming concepts judgments or conclusions about objects which are either beheld by the senses or cannot be intuitively apprehended at all

The exceptions to the foregoing summary are almost as numerous as the exemplifications of the points mentioned Nothing less than this intricate pattern of agreements and differences will serve however to represent the complexity of the discussion and the way in which diverse theories of sense imply different views of nature and man of mind and knowledge The situation can be illustrated by taking certain doctrines which seem to be opposite on most points and then considering other theor es which seem to agree on this point or that with both extremes

WE HAVE ALREADY observed the opposition between Hobbes and Aquinas with regard to matter and spirit in relation to the activity of the senses Hobbes like Lucretius not only treat all mental pheno nena as manifestations of bodily motion but also reduces thought to the train or sequ nce of images Images are in turn reducible to the sensations from which they derive.

As we have no imagination Hobbes writes whereof we have not formerly had sense in whole or in parts so we have no transition from one imagination to another whereof we *never had the like before in our senses* Using the word thoughts to stand for the images derived from sense Hobbes goes on to say that besides sense and thoughts and the train of thoughts the mind of man has no other motion though by the help of speech and method the same faculties may be improved to such a height as to distinguish men from all other living creatures

Only man s use of words makes the difference in the exercise of the imagination that we generally call understanding and which according to Hobbes is common to man and beast Similarly it is only the fact that common names have general significance which gives human discourse the appearance of abstract thought for Hobbes denies abstract ideas Thoughts or images are no less particular than sensations there being nothing in the world universal but names

Berkeley and Hume seem to agree with Hobbes that man has no abstract ideas or universal concepts that all the operations of thought are merely elaborations of the original impressions of sense and that no special power but only the use of language distinguishes men from other animals

Berkeley uses the word idea to stand for sense impressions— ideas actually imprinted on the senses —and for whatever is perceived by attending to the passions and operations of the mind To these two he adds a third ideas formed by the help of memory and imagination either compounding or dividing or barely representing those originally perceived in the aforesaid ways. The only difference between the first and the third is that the ideas of sense are more strong lively and distinct than those of the imagination But our ideas of sense and imagination do not cover all the objects of which we can think He admits therefore the possibility of our having *notions* whereby we understand the meaning of a word like spirit or soul which refers to a substance of which we can form no idea

Hume divides all the perceptions of the mind into two classes or species which are distinguished by their different degrees of force and vivacity The less forcible and lively are commonly denominated *thoughts* or *ideas* The other he calls impressions meaning thereby *all our more lively perceptions* Impressions are the source of all other ideas the creative power of the mind consisting in no more than the faculty of compounding transposing augmenting or diminishing the materials afforded us by the senses and every simple idea bein copied from a similar impression

Yet though Berkeley and Hume seem to agree with Hobbes in reducing all thought to primary sense perceptions and derived memories or imaginations Hume does not attempt to explain thought by the motions of matter Berkeley differs even more radically He denies that matter or bodies exist and so he regards sense perception like all the rest of thought as purely spiritual The soul passively receives its original impressions directly from God and actively forms the ideas it is able to derive from these impressions.

Nor do all those who somehow conceive man as composed of both body and soul agree upon the function of sense in relation to the rest of thought Locke for example uses understanding to cover all sorts of mental activity Mental activity begins with the passive reception of the simple ideas of sense—the impressions produced in us when the bodies that surround us do diversely affect our organs —and the simple ideas of reflection which arise from an awareness of our own mental operations But mental activity also includes the formation of complex ideas by the compounding of simple ones and even the act whereby we form abstract ideas in doing which man in Locke s opinion is distinguished from brutes

All these activities require soul as well as body All are somehow nothing more than a reworking of the original sensations passively received In this last respect Locke s view accords with that of Hobbes Berkeley and Hume though he differs from them with respect to abstract ideas and in his theory of body and soul On the very point which he holds in common with Hobbes Berkeley and Hume Locke seems to disagree with Descartes.

Thinking for Descartes is the activity of a

purely spiritual substance—the rational soul—peculiar to the dual nature of man whereas sensation and imagination common to men and brutes are purely corporeal functions In man the soul or thinking substance may form certain of its ideas those relative to bodies under the influence of sense or fancy but with regard to other ideas such as those we have of geometrical figures Descartes says he cannot admit that they have at any time entered our minds through the senses He objects to the use of the word idea for images or what he calls pictures in the corporeal imagination i e in some part of the brain He criticizes those who never raise their minds above the thin s of sense so accustomed are they to consider nothing except by imagining it with the result that whatever is not capable of being imagined appears to them not to be intelligible at all

Against the maxim which Locke no less than Hobbes or Berkeley would approve—that "there is nothing in the understanding which has not first of all been in the senses —Descartes offers the ideas of God and of the soul as plainly contrary examples ideas clearly in the mind which have no orig n in sensation or fancy Those who desire to make use of their imagination to understand these ideas he adds act in the same way as if to hear sounds or smell odours they should wish to make use of their eyes

In making a sharp distinction between the faculties of sense and understanding or reason Descartes seems to share the position of Plato Aristotle Aquinas Spinoza and Kant Yet for Descartes as for Plato the intellect in its own sphere of objects is l ke the senses in the rs since each is able to behold its proper objects intuitively whereas for Kant as for Aristotle sense alone is a faculty of intu tion The ideas by which we apprehend intelligible objects acco ding to Plato Descartes and Sp noza are not de ived from sensations or images According to Ari totle and Aquinas on the other hand the intellect abstracts all its ideas or universal concepts f om the p rticulars of sense

In this respect A istotle and Aqu na seem to be n agreement with Locke even though that agreement must be qual fied by the obse vation that Locke sees no need for a special faculty to obtain abstract ideas On the other hand Plato Aristotle Aquinas and Descartes all seem to agree in holding that understanding is as immaterial as its objects Unlike sense which requires bodily organs rational thought is according to them an activity peculiar either to the soul itself or to a power of the soul which is not embodied in an organ as the power of vision is embodied in the eye or the powers of memory and imagination are embodied in the brain

William James denies this He holds the view that all forms of consciousness are someho v functions of the brain Yet he also insists that percept and concept are radically distinct forms of consciousness To this extent James makes as sharp a separation as the authors above mentioned bet veen the sensory and the rational phases of thought He places sensation perception memory and imagination on one side and conception judgment and reasoning on the other But this is for him not a distinction of faculties or powers but only of different functions which one and the same mind is able to perform

CERTAIN POINTS OR problems in the traditional discussion of sense are unaffected by the basic issues just considered For example most writers tend to make some distinction between the special exterior senses such as vision and hearing touch and taste and the several interior senses which Aquinas enumerates as the common sense memory imagination and the estimative or cogitative powers Yet not all who consider memory and imagination as activities consequent upon sense perception call them interior senses Not all reco nize a distin t estimative or co tative power even whe they reco nize a kind of th nking about particulars done by animals and men with sensory materi al Nor do all who discuss d scriminat on or comparison nd the collation or comb ning of the impressions received from the special senses attribute these funct ons to the sp cial faculty which Aristotle fi t calls the ommon sense

F equ ntly th same analyt c l point is made in different v ys As nd cated n th chapter on QU LITY the dist n t on which Aristotle

and Aquinas make between proper and com mon sensibles according as the quality such as color and odor belongs to a single sense or like shape and motion can be perceived by two or more senses seems to parallel the dis tinction between what Locke calls secondary and primary qualities But where Locke and others treat the so called secondary qualities as entirely subjective occurring only in the experience of the sentient organism and having no reality in the sensible thing Aristotle takes a contrary view

When it is not actually seen or smelled the sensible thing according to Aristotle is po tentially colorful or odoriferous just as when it is not actually seeing or smelling the sense of vision or smell is also in a state of potenti ality with respect to these qualities But when the sensible thing is actually sensed then Aristotle says the actuality of the sensible object and of the sensitive faculty is *one* actu ality The thing is actually colored when it is a tually seen though it is only potentially colored when it is merely able to be so seen Earlier students of nature he writes were mistaken in their view that without sight there was no white or black without taste no savor This statement of theirs is partly true partly false sense and the sensible object are am biguous terms *i e* they may denote either po tentialities or actualities The statement is true of the latter false of the former

Another example of the same analytical point (which is made differently by different writers) concerns the distinction between sen sation and perception According to William James perception involves sensation as a por tion of itself and sensation in turn never takes place in adult life without perception also being there The difference between them is that the function of sensation is that of mere ac quaintance with a fact whereas percept on s fun tion is knowledge *about* a fact and this knowledge admits of numberless degrees of complication Hearing a sound is having a sensation but perception occurs when as James points out we hear a sound and say a horse-car

But James does not agree that when percep tion is so described it is as other psychologists have suggested a species of reasoning If ev ery time a present sign suggests an absent real ity to our mind we make an inference and if every time we make an inference we reason then James admits perception is indubita bly reasoning Only one sees no room in it for any unconscious part No inference is con sciously made in perception and James thinks that to call perception unconscious reasoning is either a useless metaphor or a positively mis leading confusion between two different thin s In his opinion perception differs from sensa tion [simply] by the consciousness of further facts associated with the object of sensation For him perception and reasoning are coor dinate varieties of that deeper sort of process known psychologically as the association of ideas

What James treats as the object of sensation Aristotle refers to as a quality sensed by one or more of the special senses either a proper or a common sensible What James treats as the ob ject of perception Aristotle calls an accidental object of sense because it is strictly not sen sible at all by any of the exterior senses singly or in combination When we call the white object we see the son of Diares or a man we have an example of an accidental sensible or an object incidentally perceived because being the son of Diares is incidental to the directly visible white patch we see with our eyes

This distinction between sensation and per ception seems to have a bearing on the prob lem of the fallibility of the senses Again the same point seems to be differently made Aris totle for example holds that whereas each of the senses is normally infallible in the appre hension of its proper object or appropriate quality error is possible in the perception of the complex thing which is not strictly an ob ject of the special senses While the perception that there is white before us cannot be false he writes the perception that what is white is this or that may be false

Lucretius likewise insists that the senses themselves are never deceived but that all the errors attributed to the sen es are the result of a false inference or judgment which reason makes on the basis of the evidence presented by the senses That also seems to be the opinion of Descartes who thinks that no direct ex perience can ever deceive the understand ng if

it restricts its attention accurately to the object presented to it Thus if a man suffering from jaundice persuades himself that the things he sees are yellow this thought of his will be composite consisting partly of what his imagination presents to him and partly of what he assumes on his own account namely that the color looks yellow not owing to the defect in his eye but because the things he sees really are yellow We can go wrong only when the things we believe are in some way compounded by ourselves Descartes holds that no falsity can reside in sensations themselves but only in those judgments which on the basis of sensations we are accustomed to pass about things external to us

THE MOST FUNDAMENTAL judgment which men make on the basis of sensation is that an external world exists—a reality not of our own making Descartes argues from the evidence of the senses to the independent existence of a world of bodies Though Berkeley argues on the contrary that bodies do not exist except as objects of perception he attributes the sense impressions over which we seem to have no control to the action of an external cause—to God who uses them as signs for instructing us

Locke defines sensitive knowledge as that which informs us of the existence of things actually present to our senses We may know our own existence intuitively and God s existence demonstratively but the knowledge of the existence of any other thing we can have only by sensation And though he adds the notice we have by our senses of the existing of things without us be not altogether so certain as our intuitive knowledge or the deductions of our reason yet it is an assurance that deserves the name of knowledge

Against such views the most fundamental skepticism goes further than doubting the veracity of the senses because of the illusions and hallucinations they cause us to suffer By what arguments Hume asks can it be proved that the perceptions of the mind must be caused by external objects and could not arise either from the energy of the mind itself or from the suggestion of some visible or unknown spirit?

It is a question of fact he adds whether the perception of the senses be produced by external objects resembling them How shall this question be determined? By experience surely as all other questions of a like nature But here experience is and must be entirely silent The mind has never anything present to it but the perceptions and cannot possibly reach any experience of their connexion with objects The supposition of such a connexion is therefore without any foundation in reasoning

OUTLINE OF TOPICS

Chapter 85 SIGN AND SYMBOL

INTRODUCTION

A SIGN points to something A symbol stands for or takes the place of another thing Sign and symbol are sometimes differentiated according to whether emphasis is placed on that which is signified or pointed out or on that which functions as a surrogate or substitute

Yet sign and symbol are often used interchangeably We call the notations of music or mathematics either signs or symbols Words too are traditionally spoken of as signs or symbols Words and other conventional notations for expressing meaning both point to and stand for something else It is only in certain cases that one of these two functions seems to predominate as the road marker points out the direction to take and paper money takes the place of the precious metal whose value it represents

On what is common to signs and symbols of all sorts there seems to be no disagreement throughout the tradition of western thought From Augustine s statement that a sign is a thing which over and above the impression it makes on the senses causes something else to come into mind as a consequence of itself to Freud s analysis of the symbolism of dreams of symptom and symptomatic acts the great books consider sign or symbol as one term in a relation the relation being one of meaning or as Freud says of significance intention tendency The fundamental problems traditionally discussed concern the nature of meaning itself and the modes of signification which vary with the kinds of things that function as signs and the kinds of things they signify

WITH RESPECT TO THINGS which function symbolically the primary distinction seems to be that between natural and conventional signs Augustine at first suggests a threefold division Some things are simply things and not signs at all Some (for example the ram which Abraham offered up instead of his son) are not only things but also signs of other things And some things such as words are never employed except as signs Augustine adds that words are not merely signs Every sign he writes is also a thing for what is not a thing is nothing at all

The distinction between natural and conventional signs falls within this threefold division Natural signs Augustine says are those which apart from any intention or desire of using them as signs do yet lead to the knowledge of something else as for example smoke when it indicates fire For it is not from any intention of making it a sign that it is so but through attention to experience we come to know that fire is beneath even when nothing but smoke can be seen And the footprint of an animal passing by belongs to this class of signs

Augustine seems to find natural signs in things that are related as cause and effect Berkeley on the other hand tends to substitute the relation of sign and thing signified for the relation of cause and effect The fire which I see he writes is not the cause of the pain I suffer upon my approaching but the mark that forewarns me In like manner the noise that I hear is not the effect of this or that motion or collision of the ambient bodies but the sign thereof

Every natural thing or event thus tends to become the sign of something else so that the whole of nature constitutes a vast symbolism or language by which God informs us of his plan Aristotle tends in the opposite direction to limit natural signs to those things which according to our knowledge and experience permit a necessary or probable inference to something else The fact that a woman is giving milk

he regards as an infallible sign that she has lately borne a child the fact that a man is breathing fast is merely a probable and refutable sign that he has a fever

In any case signs are generally acknowledged to be natural if they satisfy Augustine s criterion that they were not intentionally devised by men for the purpose of signifying Conventional signs on the other hand he writes are those which living beings mutually exchange for the purpose of showing as well as they can the feelings of their minds or their perceptions or their thoughts Of conventional signs Augustine goes on to say words hold the chief place because everything which can be expressed by gestures or by such non verbal symbol as flags or bugle calls can also be expressed in words whereas many thoughts which words readily express do not lend themselves easily to other modes of expression

Except for the hypothesis (discussed in the chapter on LANGUAGE) of a natural form of speech common to all men and consisting of words perfectly adapted to the objects they name it is never proposed that words are any thing but conventional signs As Aristotle says nothing is by nature a noun or a name—it is only so when it becomes a symbol The audible sound or the visible mark becomes a symbol only by human institution or convention

Yet not all the audible sounds which men and other animals make to express their feelings or desires are in Aristotle s opinion to be regarded as words Inarticulate sounds such as those which brutes produce are significant yet none of these constitutes a noun Nor are such cries whereby one animal calls another or communicates fear or anger strictly conventional signs for as Augustine points out they are instinctive modes of expression and so are natural rather than conventional They are not voluntarily instituted

IN TERMS OF THE ancient distinction between the conventional and the natural—that which changes from time to time and place to place and that which is everywhere and always the same—no one would question the conventionality of words and of all other non verbal symbols which are peculiar to one people one culture or one epoch That words are conventional signs raises the central problem concerning their meaning or significance Utterly dissimilar words in different languages can have the same meaning and identical sounds or marks in different languages can mean quite different things Since the sounds or marks which constitute spoken and written words do not possess meaning naturally from what source do such conventional signs get the meanings they have?

The usual answer given by Aristotle Locke and others is that words get their meanings from the ideas thoughts or feelings which men use them to express Spoken words writes Aristotle are the symbols of mental experience and written words are the symbols of spoken words Just as all men do not have the same writing so all men do not have the same speech sounds but the mental experiences which these directly symbolize are the same for all as also are those things of which our experiences are the images

In addition to being able to make articulate sounds it was necessary for man Locke says to be able to use these sounds as signs of internal conceptions and to make them stand as marks for the ideas within his own mind whereby they might be made known to others Thus words came to be used by men as the signs of their ideas not by any natural connexion that there is between particular articulate sounds and certain ideas for then there would be but one language amongst all men but by a voluntary imposition whereby such a word is made arbitrarily the mark of such an idea The use then of words is to be sensible marks of ideas and the ideas they stand for are their proper and immediate signification

Locke goes further Not only does the immediate signification of words i e in the ideas they stand for but in his view words can be signs of nothing else Yet he also considers the fact that men because they would not be thought to talk barely of their own imaginations but of things as they really are often suppose their words to stand also for the reality of things Locke thinks nevertheless that obscurity and confusion enter into the signification of words whenever we make them stand for anything but those ideas we have in our own mind

But though the meaning of a word may come from the idea it signifies the word which is thus made meaningful seems in the common usage of mankind to serve as the name or designation of some real thing It refers to something other than ideas or concepts in the human mind Locke himself talks of the application of names to things and in his consideration of the distinction between proper and common names is concerned to point out that though they differ in meaning (i e differ in the type of idea they signify) both refer to the same sort of reality—individual existences Aristotle and other writers who distinguish between things in the order of nature and the concepts we form of them tend to take both views of the significance of words Words signify the real things which they name as well as the ideas whose meanings they express If we waive for the moment the possibility that some words may signify *only* ideas whereas others signify both ideas and things two questions may be asked Are there any words which signify things alone? What is the relation between the idea and the thing a word signifies when a word signifies them both that is when a word has both sorts of significance how are they related to one another?

Aquinas answers the second question by saying that since words are the signs of ideas and ideas the similitudes of things it is evident that words function in the signification of things through the conceptions of the intellect Ideas may be the immediate or proximate object which words signify but through them words ultimately signify the real things which are themselves the objects of ideas According to this theory an idea may be both the *object signified* by a word and the *medium through which* that word also signifies the thing of which we have the idea Aquinas seems to think that ideas are always required as the medium whereby words signify things We can give a name to anything he says only insofar as we can understand it Accordingly it is impossible for words to signify things directly i e without the mediation of ideas

THIS POSITION HAS A number of consequences for the theory of signs and raises a number of issues. Augustine statement that every sign is also a thing has a different meaning when it is said of the sensible things which also happen to be signs and of the things of the mind—concepts or ideas—which cannot *be* without *being signs* The understanding of this difference helps to explain the relation between verbal signs and the mental signs through which they signify or from which they get their meanings

Whereas words are in the first instance meaningless marks and sounds which get meaning when men use them to express their thoughts or feelings ideas and images are at once meaningful however they arise in the mind They are natural signs in the sense that it seems to be their very nature to signify They do not get meaning They do not even have meaning in the way in which smoke as a natural sign of fire has a meaning which is distinct from though a consequence of its nature as smoke An idea *is* a meaning an intention of the mind as it is sometimes called a reference to an object thought about The idea of fire is the meaning the word fire has when it designates the natural phenomenon which that word is conventionally used to name and as Aristotle suggests the conventional signs of different languages [e g fire and *feuer*]—have the same meaning because the idea of fire is the same and the natural phenomenon experienced and thought about is the same for men of diverse tongues

That ideas or mental images are themselves meanings or intentions—the symbols of things thought about—seems to be recognized in different ways by many writers in the tradition of the great books In the *Cratylus* Socrates suggests that signs should be like the things they signify Some conventional signs he thinks are better than others in this respect He implies that all words are inferior to mental images which by their very nature imitate or resemble their objects

The act of memory according to Aristotle requires a memory image which is something like an impression or picture of the thing remembered If the memory image through its resemblance to something once experienced did not function as the sign of that absent thing memory would not be memory for Aristotle argues it would consist in beholding

the memory image itself which is present rather than the absent thing it stands for

Aquinas perhaps is the writer most explicit in his treatment of images and ideas as in their very nature meanings or intentions of the mind His calling them mental words seems to indicate that in his view they like physical and sensible words are signs but the added qualification of mental also implies their difference The vocal sound which has no signification he writes cannot be called a word wherefore the exterior vocal sound is called a word from the fact that it signifies the interior concept of the mind It follows that first and chiefly the interior concept of the mind is called a word The mental word or concept suffices when the mind turns to the actual consideration of what it knows habitually for then he adds a person speaks to himself But unlike angels who can make their concepts known to one another immediately men require the medium of external speech They must use sensible physical signs to communicate their thoughts

Without referring to ideas as mental words Locke does appear to identify ideas with meanings and to regard them as signs The definition of a word he says is an attempt to make known the meaning or idea it stands for Denying that the general and the universal belong to the real existence of things he holds that they "concern only signs whether words or ideas Words are general when used for signs of general ideas and ideas are general when they set up as the representatives of many particular things but universality belongs not to things themselves which are all of them particular in their existence even those words and ideas which in their signification are general

The basic issue to which Locke is addressing himself is discussed in the chapter on UNIVERSAL AND PARTICULAR. Locke s solution seems to involve the affirmation of abstract ideas which are general or universal in their significance and through which common names come to have a different sort of meaning from the meaning of proper names Ideas become general by separating them from the circumstances of time and place and any other ideas that may determine them to this or that particular existence Common nouns like man or cat become general in their significance according to Locke by being made the signs of general ideas

To the question of what kind of signification it is that general words have Locke replies As it is evident that they do not signify barely one particular thing for then they would not be general terms but proper names so on the other side it is as evident they do not signify a plurality for man and men would then signify the same That then which general words signify Locke declares is a sort of thing and each of them does that by being a sign of an abstract idea in the mind

It seems to follow therefore that those who like Hobbes and Berkeley deny the existence of abstract ideas or universal concepts must offer a different explanation of the meaning of common nouns or general names There being nothing in the world universal but names Hobbes writes a name is universal when it is imposed on many things for their similitude in some quality or other accident and whereas a proper name bringeth to mind one thing only a universal recalls any one of those many

On similar grounds Berkeley criticizes Locke s theory of how words acquire general significance His own theory is that words become general by being made the sign not of an abstract general idea but of several particular ideas any one of which it indifferently suggests to the mind And in another place he says that an idea which considered in itself is particular becomes general by being made to represent or stand for all other particular ideas of the same sort He does not himself explain how we come by the notion of the same sort or how one particular idea can represent the sort to which other particular ideas belong But he rejects Locke s explanation because it involves ideas which are not only general but also abstract

The attempt to account for the meaning of general names is in Berkeley s view the cause of Locke s acceptance of abstract ideas If there had been no such thing as speech or universal signs he writes there never [would have] been any thought of abstraction Not only do men mistakenly suppose that every name has or ought to have one only precise and settled signification which inclines [them]

to think there are certain abstract determinate ideas that constitute the true and only immediate signification of each general name but they also suppose that it is by the mediation of these abstract ideas that a general name comes to signify any particular thing Whereas in truth Berkeley concludes there is no such thing as one precise and definite signification annexed to any general name Where Locke would say that a common name gets its general meaning by signifying one idea which itself has general significance Berkeley reiterates that a general name gets its meaning from a great number of particular ideas all of which it signifies indifferently

THE RELATION OF WORDS to ideas raises still other problems in the theory of signs problems which have peculiar interest in the tradition of the liberal arts One of these problems has already been mentioned It is the question whether some words signify ideas alone in contrast to words which signify ideas and through them things This suggests the parallel problem of words which signify words in contrast to words which are the names of things

In his little tract *Concerning the Teacher* Augustine points out that some words such as noun and adjective signify kinds of words just as other words such as man and stone signify kinds of things Furthermore in the sentence man is a noun the word man signifies itself as the object referred to whereas in the sentence man is an animal the word man signifies a living organism of a certain sort The same word therefore may signify both itself and some thing other than itself

These differences which Augustine observes in the signification of words come to be formulated in the traditional distinction between the first and second imposition of words A word is used in the first imposition when it is used to signify things which are not words as for example the word man when it refers to a human being A word is used in the second imposition when it is applied to word rather than things as for example the word noun said of man or the word man when it is used to refer to itself in the sentence man is a noun

A parallel distinction is that between words used in the first and the second intention When the word man is used to signify a living organism of a certain sort it is used in the first intention because it signifies a reality not an idea A word is said to be used in the second intention when it signifies an idea rather than a thing For example in the sentence man is a species the word species signifies a logical classification and so is in the second intention and the word man is also in the second intention because it refers to the idea which is denominated a species

In some cases an idea may not *signify things* at all but only other ideas such as the logical notions of *genus* and *species* Words like genus and species unlike the words man and stone can therefore be used only in the second intention The idea *man* is called a first intention of the mind because its primary function is to signify the living thing Only secondarily does it signify itself as an object able to be considered The idea *species* on the other hand is called a second intention because its sole function is to signify ideas which stand to other ideas in a certain relation

Hobbes concisely summarizes most of these points when he points out that some words are the names of the things conceived whereas others are the names of the imaginations themselves that is to say of those ideas or mental images we have of all the things we see and remember And others again are names of names as universal plural singular are the names of names The names which we apply to particular species and genera such as man and animal Aquinas says "signify the common natures themselves but not the intentions of these common natures which are signified by the terms *genus* or *species*

ANOTHER TRADITIONAL distinction in the modes of signification is that between intrinsic and extrinsic denomination A name is said to be an intrinsic denomination when it is applied to a thing in order to signify its nature or its inherent properties and attributes as for example when we call a thing animal or rational white or square A name is said to be an extrinsic denomination when it is applied to a thing only in order to signify some relation in which that thing stands to some-

thing else as for example when we call sun shine healthy because it helps to produce healthy organisms or when we apply the names of animals such as pig or fox to men be cause we think the men bear certain resem blances to these animals The same word can be used in different connections both as an intrin sic and as an extrinsic denomination Healthy means an inherent quality when it is applied to living organisms and a causal relation to or ganic health when it is applied to sunshine pig means a certain kind of animal when it is applied to the four footed mammal and only a resemblance to this animal in certain charac teristics when it is applied to men

This double use of the same word exemplifies what is traditionally called equivocal speech or the equivocal use of a name Some writers tend to identify equivocation with amb guity on the ground that both involve a multiplicity of meanings for the same word Others seem to think that a word is used ambiguously only if its user is indefinite as to which of its several meanings he intends to express but they hold that a word can be used equivocally without ambigu ty if its user makes plain that he is employing it now in this sense now in that

Aristotle says that two things are named equivocally when though they have the same name the definit on corresponding with the name d ffers for each and on the other hand things are said to be named univocally which have both the name and the definition an swering to the name in common When we call a man and a pig an animal we are using that word univocally because we are using it with the same definition or mean ng in both cases but when we call a p g and a man a pig we are using that word equivocally because we are using it with d fferent meanings s gnify ng *having the nature of a pig* in one instance and *being l ke a p g in certain respects* in the other

Aristotle distinguishes several types of equiv ocation of which we have already noted two The use of the word healthy to describe an animal and sunshine is that type of equivoca tion n which the same word is used to name an inherent ttribute and also a cause of that attribute In other instances of the same type it might be used to name the nature or attri but and the effect rath than the cause Speaking of a man and a pig as a pig repre sents the metaphorical type of equivocation in which the same word is used to name the nature of a thing and something else of a dif ferent nature which has only a likeness to that nature

Metaphors in turn can be divided into types Some are based on a direct sim litude bet veen two things in some accidental respect *e g* the man who is like a pig in manner of eating Some Aristotle says are based on anal ogies or proportions as for example when we call a king the father of his people Here the metaphor is based on the similarity of the re lationship of a king to his subjects and of a father to his children The name father is used metaphorically when it is transferred from one term in this proportion to the term which stands in an analogous position

A third kind of metaphor accord ng to Aris totle cons sts in the use of the same word now in a more generic now in a more specific sense or with broader and narrower meanings Of this he gives an example in the *Ethics* when he discusses general and special justice using the word justice narrowly to s gnify one of the special virtues and broadly to mean all the vir tues considered in their social aspect There is a sense of the word justice he writes in which it signifies not part of virtue but virtue en tire this form of just ce is complete virtue thou h not absolutely but only in relat on to our neighbor The word injustice is also used in a correspondingly wide sense But there is another kind of injustice which is a part of injustice in the wide sense This particular injustice Aristotle says shares the name and nature of the first because its definition falls within the same genus As Aristotle treats this type of equ vocation n the *Rh toric* and the *Poetics* it includes three poss biliti s the trans fer of the name of a genus to one of its spec es the transfer of the name of a species to its genus and the transfer of the name of one spe c es to another in the same genu

It may be questioned wh ther this type of equivocation is properly class fied as metapl o ical on A stotl s o vn defin t on of metaphor as g ving a th g a n m that b lo gs to some thing lse In th type of equivocation exem pl fied by th use of the word justice now

with a generic and now a specific meaning the name does not seem to belong to the genus any more than it does to the species or conversely In contrast when the name father is given to a king in relation to his people the usage is metaphorical because the name father belongs to something else *i e* the man who is a progenitor

The same point can be made in terms of intrinsic and extrinsic denomination When justice is used as the name for the whole of virtue (regarded socially) and also for one particular virtue the word is an intrinsic denomination in both instances In all other types of equivocation the equivocal word is used once as an intrinsic and once as an extrinsic denomination for example as applied to the animal the word pig is an intrinsic denomination but it is an extrinsic denomination when it is applied to a man in order to signify a certain resemblance to the animal to which the name belongs The same is true in the case of the word healthy as said of an animal and of sunshine

In all these cases of equivocation the two meanings of the same word are not totally distinct On the contrary the two senses have something in common One of the meanings seems to be derived from the other one appears to be secondary (usually the one involved in the extrinsic denomination) and the other primary What is traditionally called equivocation by chance in contrast to equivocation by intention is the extreme case in which the same word is used in two utterly distinct senses having no common element of meaning at all *e g* the word pen used for a writing instrument and an enclosure for animals Equivocation by intention in which the different meanings of a word have something in common thus appears to be intermediate between equivocation by chance (in which the meanings share no common element) and univocal usage (in which the meaning is exactly the same each time the word is used)

In the *Physics* Aristotle seems to discover still another type of equivocation A pen a wine and the highest note in a scale are not commensurable he writes We cannot say whether any one of them is sharper than any other because it is only equivocally that the same term sharp is applied to them This does not seem to be equivocation by chance for the word sharp seems to have some common meaning as applied to the three objects which affect the diverse senses of touch taste and hearing nor is it like all other cases of equivocation by intention in that no one of these three meanings of sharp seems to be primary and the others derived from it Furthermore in all three meanings the word sharp is used as an intrinsic denomination

In the *Metaphysics* Aristotle also considers the special pattern of meaning which words like being or one have when they are applied to such heterogeneous things as substances quantities qualities etc He refers to these words as ambiguous or equivocal comparing them with the word healthy as said of an animal and of other things which either cause health or are effects of health It may be questioned however whether being is equivocal in the same way that healthy is since it always carries the significance of an intrinsic never of an extrinsic denomination Being as said of heterogeneous things seems to be more like sharp said of diverse sensible qualities—having a meaning which remains somehow the same while it is diversified in each case according to the diversity of the objects to which it applies

THESE CONSIDERATIONS of the univocal and the equivocal sign along with the treatment of ambiguity and intrinsic and extrinsic denomination indicate the extent and manner in which the great books anticipate the kind of analysis which in our time has come to be called semantics The chapter on LANGUAGE gives further evidence of the fact that many of the points and distinctions made in contemporary semantics have a long history in the tradition of the liberal arts Furthermore as the chapter on LANGUAGE indicates contemporary semantics cannot even claim novelty for its great interest in freeing men from the tyranny of words or in serving as a critical instrument to cut through the vicious abstractions of metaphysics Hobbes and Locke frequently dismiss theories not on the ground that they are false but rather because they think that the statement of them consists in so many meaningless words

In the tradition of the great books the anal ysis of words and their modes of signification seems to be motivated by other interests as well as these The distinction between the univ ocal and the equivocal sign for example is considered in its bearing on the logical problems of definition and demonstration as well as for the sake of proposing remedies to safe guard discourse against ambiguity It is also brought to bear upon the theological problem of the meaning of the names men apply to God and on the way in which they interpret the words of Sacred Scripture

The problem of the names of God is dis cussed in the chapter on SAME AND OTHER in terms of the kind of likeness which can obtain between an infinite being and finite creatures As there appears Aquinas takes the position that God and creatures are neither the same in any respect nor are they in all respects so di verse as to be utterly incomparable Though an infinite and a finite being are in his view in commensurable yet they can also have some sort of similitude—not an unqualified same ness but the kind of similarity which can be described as an intrinsically diversified same ness

Aquinas holds therefore that no names can be applied to God and creatures univocally for no name belongs to God in the same sense that it belongs to creatures Nor he goes on are names applied to God and creatures in a purely equivocal sense for it would follow then that from creatures nothing at all could be known or demonstrated about God which supposition Aquinas denies Between these two extremes of the simply univocal and the purely equivocal he finds a middle ground in a type of signification which he calls analogical The meaning of an analogical name he says is not as it is in univocals one and the same *yet it is* not totally diverse as in equivocals

What he means by pure equivocation seems to be what earlier writers call equivoca tion by chance and what he means by the analogical seems to correspond to what they call equivocation by intention Univocal names have absolutely the same meaning he writes while equivocal names have absolutely d verse meanings whereas in analog cals a name taken in one signification must be placed in the definition of the same name taken in other significations as for instance being which is applied to *substance* is placed in the definition of being as applied to *accident* and healthy applied to *animal* is placed in the definition of healthy as applied to *urine* and *medicine*

But as we have seen there are many types of equivocation by intention—the attributive based on cause and effect as exemplified by the word healthy that involving broader and narrower meanings exemplified by the word justice metaphors of the sort exempli fied by calling a man pig and of the sort based on analogies when we speak of a king as the father of his people and finally the very special type of equivocation found in sharp applied to a tone a taste and a touch

If Aquinas places the kind of signification he calls analogical in the general area of equiv ocation by intention it may be asked whether the various names of God are all analogical *in the same way* The answer seems to be negative for he distinguishes those names which have only a metaphorical sense when said of God such as angry or jealous and he denies the opinion of those who say that God is called good only in an attributive sense *i e* sig nifying him to be the cause of the goodness found in creatures On the contrary he thinks that words like good and wise and es pecially the name being are to be inter preted as intrinsic denominations when applied to both God and creatures

For Aquinas as for Aristotle that would appear to make the pattern of meaning exhib ited by the word sharp the model for the significance of being rather than that found in the merely attributive equivocation of the *word healthy —whether being is sa d of* substance and accidents or of God and crea tures The point seems to be unaffected by the fact that Aquinas calls this type of si nifica tion analogical whereas Aristotle always re fers to being as equivocal. Aristotle never treats any type of equivocation as analogical except the metaphor which results f om trans f rring the name of one t rm n a p oportion to anothe term standing in the same or a similar relationship

THE DISTINCTION BETWEEN literal and figurative or metaphorical speech seems to be of prime importance in the theologian s rules for interpreting the word of God As indicated in the chapter on RELIGION Augustine insists that the language of Holy Writ must be read in many senses Aquinas distinguishes a basic literal sense from three modes of spiritual meaning That signification whereby words signify things belongs to the first sense the historical or literal That signification whereby things signified by words have themselves also a signification is called the spiritual sense which is based on the literal and presupposes it The spiritual sense Aquinas divides into the allegorical the moral and the analogical

To grasp the various spiritual meanings the reader must understand that in Holy Scripture divine things are metaphorically described by means of sensible things As in the symbolism of the sacraments physical things serve as the outward and visible signs of an inward and spiritual grace so also in Holy Scripture spiritual truths are fittingly taught under the likeness of material things

A theologian like Aquinas thus justifies metaphors not only in Scripture but also in sacred doctrine or theology as both necessary and useful whereas in his view the poet s employment of them is solely for the sake of pleasure Philosophers and scientists on the other hand often take the opposite view—that metaphors have a place only in poetry and should be avoided in the exposition of knowledge

In the writing of poetry the command of metaphor says Aristotle is the mark of genius but all his rules for the construction of scientific definitions and demonstrations require the avoidance of metaphors as of all other forms of equivocation So too Hobbes inveighs against metaphors and figures of speech giving as one of the main causes of absurdity in science the use of metaphors tropes and other rhetorical figures instead of words proper for though it be lawful to say (for example) in common speech *the way goeth or leadeth hither or thither the Proverb says this or that* (whereas ways cannot go nor Proverbs speak) yet in reckoning and seeking of truth such speeches are not to be admitted

Darwin looks forward to the day when the terms used by naturalists of affinity relationship community of type paternity morphology adaptive characters rudimentary and aborted organs and so forth will cease to be metaphorical and will have a plain signification Freud on the other hand aware of how pervasive symbolism is in all the works of man normal and neurotic dreaming and awake seems to be reconciled to the inevitability of metaphors in scientific discourse The difficulty we meet with in picturing certain psychological processes he writes comes from our being obliged to operate with scientific terms *i e* with the metaphorical expressions peculiar to psychology Otherwise we should not be able to describe the corresponding processes at all nor in fact even to have remarked them The shortcomings of our description would disappear if for the psychological terms we could substitute physiological or chemical ones These too only constitute a metaphorical language but one familiar to us for a much longer time and perhaps also simpler

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to For example in 4 HOMER *Iliad* BK II [265 283] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 12

PAGE SECTIONS When the text is printed in one column the letters a and b refer to the upper and lower halves of the page For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119 When the text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand side of the page the letters c and d to the upper and lower halves of the right hand side of the page For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164

AUTHOR S DIVISIONS One or more of the main divisions of a work (such as PART BK CH SECT) are sometimes included in the reference line numbers in brackets are given in certain cases e g *Iliad* BK II [265 283] 12d

BIBLE REFERENCES The references are to book chapter and verse When the King James and Douay versions differ in title of books or in the numbering of chapters or verses the King James version is cited first and the Douay indicated by a (*D*) follows e g OLD TESTAMENT *Nehemiah* 7 45—(*D*) *II Esdras* 7 46

SYMBOL The abbreviation esp calls the reader s attention to one or more especially relevant parts of a whole reference passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited

For additional information concerning the style of the references see the Explanation of Reference Style for general guidance in the use of *The Great Ideas* consult the Preface.

Chapter 86 SIN

INTRODUCTION

THE sin of Satan and the sin of Adam are among the great mysteries of the Christian reli on Satan is highest among the angels the first of God s spiritual creatures He is only less than God in the perfection of his nature Adam is created with supernatural graces and gifts his immortal body is completely responsive to *his spirit his* appetite *in all things* is submis sive to his reason and his reason is turned toward God according to the original justice which harmonized his faculties and the ele ments of his nature

The only evil latent in either Satan or Adam would seem to reside in the privation of in finite being power and knowledge But this is not a moral *evil in them it is neither a sin nor* a predisposition to sin Hence the only cause of their sinning if God himself does not predes tine them to sin must be a free choice on their part between good and evil If God positively predestines them to sin then they would seem to be without responsibility and so without sin If they are not predetermined to evil—if except for the weakness of being finite they are without positive blemish—how does the con flict arise in them which opens the choice be tween good and evil and impels them almost against the inclination of their natures away from good and toward evil?

In Milton s *Parad se Lost* God says of Adam I made him just and right sufficient to have stood though free to fall Of Satan and fallen *angels* as well as of Adam God observes

They ther for s to ght b l gd
So were c e ted nor can ju tly acc se
Th make o th making o thir F te
As f P dest nat on over ul d
Th r will d pos d by absol te D c e
Of high for knowl dg they th m l es d reed
Thi own rev lt not I if I fo eknew
Fo ek owledge had no nfl ence n the r fault
Which had no less pr d ertain unforekn wn

Yet there is a difference between Adam and Satan The fallen angels by their own sug gestion fell self tempted deprav d Satan having sinned becomes man s tempter Man falls deceiv d by the other first Man therefore shall find grace the other none

As Satan approaches the Garden of Eden to work his will on man he contemplates his plight He does not deny his sin he does not repent it he does not seem fully to understand it Thus Milton has him speak

O thou that with surpass ng Gl y c owned
Lo k st from the sole Dom nion like the God
Of this ne World at whose sight all the Starrs
Hide thir diminisht he ds to thee I call
B t with no fri dly voice and add thy name
O Sun to tell thee how I hate thy beams
That bring to my r m mbrance from what state
I fell how glo once above thy Spheare
Till Prid and wo se Ambition th w me down
W r in n Heav n against Heav n matchless Ki g
Ah whe f el he deser ed no uch return
F om me whom he created what I was
In that bright eminenc and ith his good
Upbraided none n r w s his service hard
What could be l s than to aff d him p aise
The ea e t ompense nd p y h m thanks
H w due! yet all his good prov d ill in me
A d wrought but mal ce lifted up so h h
I sdeind subj ct on and th ght on step l gher
Would set me highest and n a moment qu t
Th debt mm e of endl g at tude
S bu thens m t ll pay ng st ll to o e
O had his pow ful D t ny orda n d
M m fer or Ang l I h d t od
Th n happ n i bound d hop h d ra s d
Amb t on Yet why not? some th r Powe
As g eat m ht have a p r d and me thr u h mean
Dra n to h p rt but other P we s as gr t
Fell not but stand u hak n f m with n
O f om with ut to all t mptations m d
H ds t thou th sam free Will and Powe t t nd?
Th u h d t whom h thou th n o wh t to ccuse
But Hea ns f Lo dealt qu lly to ll?
B th n h s Love accu t n lov or hate
T m alik t deals t I woe
N y cu sed b th u ce again t his thy w ll

Chose freely what it now so justly rues
Me miserable! which way shall I flie
Infinite wrauth and infinite despaire?
Which way I flie is Hell; my self am Hell;
And in the lowest deep a lower deep
Still threatning to devour me opens wide,
To which the Hell I suffer seems a Heav'n.
O then at last relent: is there no place
Left for Repentance, none for Pardon left?
None left but by submission; and that word
Disdain forbids me, and my dread of shame
Among the spirits beneath, whom I seduc'd
With other promises and other vaunts
Then to submit, boasting I could subdue
Th' Omnipotent.

Before Satan approaches Eve, Adam reminds her of their debt of obedience, saying that God requires

From us no other service than to keep
This one, this easie charge, of all the Trees
In Paradise that beare delicious fruit
So various, not to taste that onely Tree
Of Knowledge, planted by the Tree of Life,
So neer grows Death to Life, what ere Death is,
Some dreadful thing no doubt; for well thou knowst
God hath pronounc't it death to taste that Tree,
The only sign of our obedience left
Among so many signes of power and rule
Conferrd upon us, and Dominion giv'n
Over all other Creatures that possesse
Earth, Aire, and Sea. Then let us not think hard
One easie prohibition, who enjoy
Free leave so large to all things else, and choice
Unlimited of manifold delights.

The temptation to disobey first moves Eve in a dream in which the apparition of an angel speaks of the forbidden fruit

as onely fit
For Gods, yet able to make Gods of Men:
And why not Gods of Men, since good, the more
Communicated, more abundant growes,
The Author not impair'd, but honourd more?

"Here, happie Creature," the vision says to her,

Happier thou mayst be, worthier canst not be:
Taste this, and be henceforth among the Gods
Thy self a Goddess, not to Earth confind,
But sometimes in the Air, as wee, sometimes
Ascend to Heav'n, by merit thine, and see
What life the Gods live there, and such live thou.

Later when Satan in the guise of the Serpent actually addresses Eve, he argues in the same vein: that as he, by tasting of this fruit, speaks as a man, so Eve and Adam, if they too partake, shall be as Gods, knowing both Good and Evil as they know. Eve succumbs and, as Milton tells the story, Adam, knowing fully the evil of his act, joins Eve in disobedience not from envy of the gods, but out of love for her, willing to die because unwilling to live without her.

Willing "to incurr divine displeasure for her sake, or Death,"

he scrupl'd not to eat
Against his better knowledge, not deceav'd,
But fondly overcome with Femal charm.
Earth trembl'd from her entrails, as again
In pangs, and Nature gave a second groan,
Skie lowr'd, and muttering Thunder, som sad drops
Wept at compleating of the mortal Sin
Original.

In the poet's expansion of the third chapter of Genesis, the basic elements in the Judaeo-Christian conception of sin seem to be plainly accented: the pride and envy which move Satan and Eve; the disobedience which results from the disorder of Adam's loving Eve more than he loves God. In the *Divine Comedy*, another great poem of sin and salvation, Adam speaks to Dante in Paradise and tells him that "the tasting of the tree was not by itself the cause of so great an exile, but only the overpassing of the bound." Earlier Beatrice explains why, in order to redeem man from sin, the Word of God assumed human nature—the nature "which has estranged itself from its Maker." She tells Dante that "this nature thus united with its Maker, was pure and good such as it was created; but by itself it had been banished from Paradise, because it turned aside from the way of truth and from its own life." Man can fall from his nobility by "sin alone which disfranchises him and makes him unlike the Supreme Good, so that he is little illumined by Its light; and to his dignity he never returns, unless where fault empties, he fills up with just penalties against evil delight."

In both the pagan and the Christian conceptions of sin, man's pride and his disobedience of divine commandment are usually connected with the very notion of sin. The heroes of the Greek tragedies exhibiting the tragic fault of pride seem to forget that, though they strive with gods, they are only men subject to laws they cannot disobey without catastrophe. In

the *Iliad* Phoenix cautions Achilles to battle with your pride and beat it cherish not your anger for ever the might and majesty of heaven are more than ours but even heaven may be appeased and if a man has sinned he prays the gods and reconciles them to himself by his piteous cries

In pride and disobedience we find the deep disorder of love which lies at the heart of sin Pride is self love in excess of what the self deserves Disobedience as in the case of Milton s Adam may be prompted by a love which too exceeds the worth of the object loved The measure of that worth or the bounds put upon the love of self or other is set by the Supreme Good which ordering all other goods should also order our loves in proportion to their goodness

This seems to be the central insight of the *Divine Comedy* It is given a summary statement in Purgatory where Virgil explains how love is the root both of virtue and of sin Neither Creator nor creature he says to Dante was ever without love either natural or of the mind and this thou knowest The natural is always without error but the other may err either through an evil object or through little or too much vigor While love is directed on the primal goods and with due measure on the secondary it cannot be the cause of ill delight But when it is bent to evil or runs to good with more zeal or with less than it ought against the Creator his own creature is working Hence thou canst comprehend that love is of necessity the seed in you of every virtue and of every action that deserves punishment

Dostoevsky offers us further thoughts concerning the relation of love and sin In the *Brothers Karamazov* Father Zossima makes lack of love the punishment as well as the substance of sin To those who ask What is Hell? Father Zossima replies I maintain that it is the suffering of being unable to love They talk of hell fire in the material sense I don t go into that mystery and I shun it But I think if there were fire in the material sense they would be glad of it for I imagine that in material agony their still greater spiritual agony would be forgotten for a moment Oh there are some who remain proud and fierce even in hell in spite of their certain knowledge and contemplation of the absolute truth there are some fearful ones who have given themselves over to Satan and his proud spirit entirely For such hell is voluntary and ever consuming they are tortured by their own choice For they have cursed themselves cursing God and life

To avoid sin the only positive commandment according to Father Zossima is to love in accordance with God s love Love a man even in his sin he counsels for that is the semblance of Divine Love and is the highest love on earth And let not the sin of men confound you in your doings Fear not that it will wear away your work and hinder its being accomplished There is only one means of salvation then take unto yourself and make yourself responsible for all men s sins that is the truth you know friends for as soon as you sincerely make yourself responsible for everything and for all men you will see at once that it is really so and you are to blame for every one and for all things But throwing your own indolence and impotence on others you will end by sharing the pride of Satan and murmuring against God Of the pride of Satan what I think is this it is hard for us on earth to comprehend it and therefore it is so easy to fall into error and to share it even imagining that we are doing something grand and fine

In the disorder of love which leads to sin sin is itself enjoyed for its own sake and the disobedient act is pleasant because it is forbidden In that also there is the pride of supposing one s self to be a law unto one s self In his *Confessions* concerned most immediately with his own sinfulness Augustine reflects upon the pears he stole in his youth not as he says from any desire to enjoy the things I stole but only the stealing of them and the sin He asks himself What was it then that in my wretched folly I loved in you O theft of mine deed wrought in that dark night when I was sixteen? He had no need of the pears Once I had gathered them he says I threw them away tasting only my own sin and savouring that with delight for if I took so much as a bit of any one of those pears it was the sin that sweetened it

He keeps on asking himself what it was that attracted him in that theft what it was that

he enjoyed in that childish act of stealing Perhaps he finally answers it was the thrill of acting against Your law—at least in appearance since I had no power to do so in fact the delight a prisoner might have in making some small gesture of liberty—getting a deceptive sense of omnipotence from doing something forbidden without immediate punishment I was that slave who fled from his Lord and pursued his Lord s shadow O rottenness O monstrousness of life and abyss of death! Could you find pleasure only in what was forbidden and only because it was forbidden?

IN THE PAGAN AND Judaeo Christian conceptions of sin the fundamental meaning seems to depend upon the relation of man to the gods or to God whether that itself be considered in terms of law or love The vicious act may be conceived as one which is contrary to nature or reason The criminal act may be conceived as a violation of the law of man injurious to the welfare of the state or to its members Both may involve the notions of responsibility and fault Both may involve evil and wrongdoing But unless the act transgresses the law of God it is not sinful The divine law which is transgressed may be the natural law that God instills in human reason but the act is sinful if the person who commits the act turns away from God to the worship or love of other things

To disbelieve in God in divine law and divine punishment is also to disbelieve in sin—at least in the sense in which religious men have distinguished between saints and sinners between the righteous and the wicked in the eyes of God There are only two kinds of men writes Pascal the righteous who believe themselves sinners the rest sinners who believe themselves righteous

Those who reject the religious meaning of sin do not deny the wide prevalence of a sense of sin nor do they deny that many men suffer remorse for transgressions which they suppose to be evil in God s eyes but with Freud they interpret these feelings of guilt in terms of natural causes They hold that the person who is tormented by conscience suffers from an illusion concerning the true nature of his guilt When the sense of sin is intensely active and is in addition apparently unexplained by the character and conduct of the person the guilt feelings according to the Freudian view take on the attributes of pathological distortion and become part of the symptomology of the neuroses There is no question about the sincerity of the person who is thus agonized but only about the true causes of the agony

When one asks how a sense of guilt arises in anyone Freud says one is told somethin one cannot dispute people feel guilty (pious people call it sinful) when they have done something they know to be bad But then one sees how little this answer tells one What accounts for the judgment a man makes of himself as good or bad? Freud s answer is that what is bad is to begin with whatever causes one to be threatened with a loss of love because of the dread of this loss one must desist from it That is why it makes little difference whether one has already committed the bad deed or only intends to do so

The external authority of the father and through him of society becomes according to Freud internalized by the development of a super ego The manifestations of conscience are then raised to a new level to be strict one should not call them conscience and sense of guilt before this At this second stage of development conscience exhibits a peculiarity which was absent in the first That is the more righteous a man is the stricter and more suspicious will his conscience be so that ultimately it is precisely those people who have carried holiness farthest who reproach themselves with the deepest sinfulness A relatively strict and vigilant conscience is the very sign of a virtuous man and though saints may proclaim themselves sinners they are not so wrong in view of the temptations of instinctual gratifications to which they are peculiarly liable—since as we know temptations do but increase under constant privation whereas they subside at any rate temporarily if they are sometimes gratified

Freud applies his theory of the origin of feelings of guilt (in the dread of authority first and later in the dread of the super-ego) to the religious sense of sin The people of Israel he writes believed themselves to be God s favorite child and when the great Father hurled visitation after visitation upon

th m it still never shook them in this belief or caused them to doubt His power and His justice they proceeded instead to bring their prophets into the world to declare their sinful ness to them and out of their sense of guilt they constructed the stringent commandments of their priestly religion

In general Freud thinks the great religions have never overlooked the part played by the sense of guilt in civilization What is more they come forward with a claim to save man kind from this sense of guilt which they call sin We have drawn our conclusion from the way in wh ch in Christianity this salvation is won—the sacrificial death of one who therewith takes the whole of the common guilt of all upon himself about the occasion on which this pri mal sense of guilt was first acquired The con clusion referred to is developed in two of Freud s works which are devoted to the con sideration of religion and sin—the *Future of an Illusion* and *Totem and Taboo* In the latter of these books Freud tells us he had first ex pressed a suspicion that perhaps the sense of guilt in mankind as a whole which is the ulti mate source of religion and morality was ac quired in the beginning of history through the Oedipus complex

OTHER WRITERS who approach the problem of sin in legalistic rather than psychological terms either make no distinction between crime and sin or make the distinction without referring to God Spinoza for example prefaces his expla nation of the meanings of praise and blame merit and crime with a discussion of the dif ference between the natural and civil state of man In a state of nature he says no one is bound by any law to obey any one but him self Hence in a natural state sin cannot be con ceived but only in a civil state where it is de cided by universal consent what is good and what is evil and where everyone is bound to obey the State Sin therefore is nothing but d sobedience which is punished by the law of the State alone

Though Hobbes does not identify cr me and sin h s distinction between them does not seem to be based on the contrast between the civil law and the divine law unless the latter is equated with the la v of nature A crime is a sin he writes consisting in the committing (by deed or word) of that which the law for biddeth or the omission of that which it hath commanded So that every crime is a sin but not every sin a crime To intend to steal or kill is a sin though it never appear in word or fact for God that seeth the thoughts of man can lay it to his charge but till it appear by something done or said by which the intention may be argued by a human judge it hath not the name of crime

From this relation of sin to the law Hobbes continues and of crime to the civil law may be inferred first that where law ceaseth sin ceaseth But because the law of nature is eternal violation of covenants in gratitude arrogance and all facts contrary to any moral virtue can never cease to be sin Secondly that the civil law ceasing crimes cease for there being no other law remaining but that of nature there is no place for accusa tion every man being his own judge and ac cused only by his own conscience and cleared by the uprightness of his own intention When therefore his intention is right his fact is no sin if otherwise his fact is sin but not crime

The more strictly rel gious conception of sin seems to be exemplified by Pascal s remark that all that God does not permit is forbidden and that sins are forbidden by the general declaration that God has made that He did not allow them Whatever God does not permit we ought to regard as sin for the absence of God s will which is all goodness and all justice renders it unjust and wrong

With the precision of a theologian in these matters Aquinas defines the peculiar type of evil which is sin Evil he writes is more comprehensive than sin as also is good than right Now in those things that are done by the will the proximate rule is the human rea son while the supreme rule is the eternal law When therefore a human act tends to the end accord ng to the order of reason and of the eternal law then that act is right but when it turns aside from that rectitude th n it is sa d to be a sin Elsewhere he says that every *created will has rectitude of act only so far as it* is r gulated ac o d ng to the d vine will Thus only in the d v n w ll can there be no sin

whereas in the will of every creature considered according to its nature there can be sin

THE THEOLOGICAL DISCUSSION of sin involves a tremendous range of topics and problems as significant as they are subtle The dogma of original sin for example raises questions not only about the cause and character of Adam s transgression but also about the punishment which is visited upon the children of Adam in perpetuity and about the conditions under which man can be reclaimed from his bondage to sin both original and actual or personal

There seems to be some resemblance between the Christian doctrine that Adam s sin merits a penalty to be paid by all subsequent generations and the Jewish doctrine of the collective responsibility of the people of Israel for the sins of their ancestors even unto the third and fourth generation But the points of difference appear to be more fundamental than the similarity

In the first place the sins of the fathers from which later generations suffer are the individual sins of men whose natures are predisposed to sin as Adam s before the fall was not In the second place the punishment is visited not upon the whole human race but only upon the Chosen People and in the form of temporal scourges rather than in a corruption of human nature itself

Furthermore the Hebrew prophet Ezekiel questions the justice of collective responsibility What mean ye he asks

that ye use this proverb concerning the land of Israel saying The fathers have eaten sour grapes and the children s teeth are set on edge?

As I live saith the Lord God ye shall not have occasion any more to use this proverb in Israel

The soul that sinneth it shall die The son shall not bear the iniquity of the father neither shall the father bear the iniquity of the son the righteousness of the righteous shall be upon him and the wickedness of the wicked shall be upon him

But if the wicked will turn from all his sins that he hath committed and keep all my statutes and do that which is lawful and right he shall surely live he shall not die

All his transgressions that he hath committed they shall not be mentioned unto him in his righteousness that he hath done he shall live

Have I any pleasure at all that the wicked should die? saith the Lord God and not that he should return from his ways and live?

But when the righteous turneth away from his righteousness and committeth iniquity and doeth according to all the abominations that the wicked man doeth shall he live? All his righteousness that he hath done shall not be mentioned in his trespass that he hath trespassed and in his sin that he hath sinned in them shall he die

According to Christian teaching the justice of individual punishment for the sins which individuals commit in their own lifetime does not apply to the penalty which all men must pay for the sin of Adam Wherefore as by one man sin entered into the world St Paul writes to the Romans

and death by sin and so death passed upon all men for that all have sinned

(For until the law sin was in the world but sin is not imputed when there is no law

Nevertheless death reigned from Adam to Moses, even over them that had not sinned after the similitude of Adam s transgression who is the figure of him that was to come

But not as the offence so also is the free gift For if through the offence of one many be dead much more the grace of God and the gift by grace which is by one man Jesus Christ hath abounded unto many

And not as it was by one that sinned so is the gift for the judgment was by one to condemnation but the free gift is of many offences unto justification.

For if by one man s offence death reigned by one much more they which receive abundance of grace and of the gift of righteousness shall reign in life by one Jesus Christ)

Therefore as by the offence of one judgment came upon all men to condemnation even so by the righteousness of one the free gift came upon all men unto justification of life

For as by one man s disobedience many were made sinners so by the obedience of one shall many be made righteous

The Christian doctrine of original sin thus appears to be closely connected with the Christian doctrine of the need for a divine saviour —God Himself become man to redeem man from the taint of sin and through the sacraments He instituted to provide the instruments of healing grace and the means of repentance for and absolution from both original sin and the individual s own personal sins.

The understanding of the sacraments the theory of grace in relation to the original and fallen nature of man the issue concerning grace and good works, or God s justification and man s merit in the achievement of sanctity and salvation the distinction between the ever lastin perdition of Hell and the expiatory punishments of Purgatory—all these funda mental theological problems are involved in the consideration of sin and its consequences both temporal and eternal

Some of these problems are discussed in the chapters on MAN ANGEL, IMMORTALITY and PUNISHMENT Other matters such as the clas sification of sins according to the distinction between spiritual and carnal mortal and venial and the enumeration of the various species of both mortal and venial sin in the order of their gravity are problems of moral theology Thou h they belong primarily to this chapter they are also related to the classification of virtues and vices especially to the theory of the theological virtues and among the theological virtues especially to charity which is the princ ple of sanctity even as pride is the pr nciple of sin

Of all points in the consideration of s n the distinct on between original and acquired sin is perhaps the most important not only because inherited sinfulness is conceived as the predis posing cause of all other sins but also because the human nature corrupted by sin is con ceived as fallen below the perfection of a purely natural man as well as below the state of grace in which Adam was created As Adam had gifts which made him superior to the natural man—immortality infused knowledge and freedom from error immunity from concupiscence ex emption from labor and servility—so the chil dren of Adam cast out of Eden have ingrained weaknesses which make them unable to achieve the goods or attain the ends proportionate to their human nature

Accord ng to some th ologians the purely natural man without eithe the gifts of grace or the wounds of sin has never existed It is this mystery of man having natural aspirations wh ch exceed the weakened powers of his f llen nature that Pascal se ms to contemplate n all hi observations on the g eatness and wretch edness of man —the astonishing contradic tions which he thinks only the Christian re ligion explains In the state in which men now are he writes there remains to them some feeble instinct of the happiness of their former state and they are plunged in the evils of their blindness and their lust which have become their second nature

As the result of original justice Aquinas writes the reason had perfect hold over the lower parts of the soul while reason itself was perfected by God in being subject to Him Now this same original justice was forfeited by the sin of our first parent so that all the powers of the soul are left as it were destitute of their proper order whereby they are nat urally directed to virtue This destitution is called a wounding of nature In so far as the reason is deprived of its order to the true there is the wound of ignorance in so far as the will is deprived of its order to the good there is the wound of malice in so far as the irascible is deprived of its order to the arduous there is the wound of weakness and in so far as the concupiscible is deprived of its order to the delectable as moderated by reason there is the wound of concupiscence Accordingly these are the four wounds inflicted on the whole of human nature as a result of our first parent s sin

Aquinas rejects the supposition that the entire good of human nature can be destroyed by sin arguing that what sin diminishes is the natural incl nation to virtue which is befitting to man from the very fact that he is a rational being But sin cannot entirely take away from man the fact that he is a rational be ng for then he would no longer be capable of sin

Other theologians take a more extreme view than Aquinas and Augustine They attribute depravity rather than weakness to human na ture as a consequence of o iginal sin On the Calvinistic theory Mill writes the one great offense of man is self will Under the maxim that whatever is not a duty is a sin men are left w th no cho ce Human nature being radically corrupt M ll continues there is no r demption for any one until human nature s killed within h m But o ding to August ne a d Aquinas original s n doe not deprive the ind vidual man ent ely of th power to estab-

lish his worth though it puts him in need of God s help to be worthy of salvation Between the one extreme which holds that men can be saved by God s grace alone and the other extreme which supposes that men can win salvation by the merit of their own good works, Augustine and Aquinas try to take the middle position according to which neither grace without good works nor good works without grace will avail

OUTLINE OF TOPICS

1 The nature of sin violation of divine law disorder in man s relation to God

2 The kinds and degrees of sin

- *2a* The distinction between original and actual sin
- *2b* The distinction between spiritual and carnal sin
- *2c* The distinction between mortal and venial sin
  - (1) The classification and order of mortal sins
  - (2) The classification and order of venial sins

3 The doctrine of original sin

- *3a* The condition of Adam before sin his supernatural state of grace his preternatural gifts
- *3b* The sin of Adam
- *3c* The nature of fallen man in consequence of Adam s sin
- *3d* The need for a mediator between God and man to atone for original sin
- *3e* The remission of sin baptism the state of the unbaptized

4 Actual or personal sin

- *4a* The relation of original sin to actual sin
- *4b* The causes and occasions of actual sin
- *4c* Pride as the principle of sin the tragic fault of *hybris*
- *4d* The consequences of actual sin the loss of charity and grace
- *4e* The prevention and purging of sin purification by sacrifice the sacrament of penance contrition confession and absolution

5 The remorse of conscience and feelings of guilt the psychogenesis and pathological expression of the sense of sin

6 Guilt and the punishment of sin

- *6a* Man s freedom in relation to responsibility and guilt for sin divine predestination or election
- *6b* Collective responsibility for sin the sins of the fathers
- *6c* The temporal punishment of sin divine scourges
- *6d* The eternal punishment of sin the everlasting perdition of the unrepentant in Hell
- *6e* The purifying punishments of Purgatory

7 Grace and good works in relation to salvation from sin

Chapter 87 SLAVERY

INTRODUCTION

MORALISTS and political philosophers who appear to be in substantial agreement on the principles of justice differ remarkably from one another on whether slavery is just The sharpness of this disagreement is made all the more remarkable by the almost unanimous condemnation of slavery—in two senses of that term.

As appears in the chapter on TYRANNY the condition of those who live under tyrannical rule is generally conceived as a kind of slavery involving not only the loss of political freedom but also the suffering of other abuses or injuries With the possible exception of Hobbes who says that tyranny is merely monarchy *misliked* none of the great authors from Plato and Aristotle to Rousseau Hegel and Mill writes of tyranny except as a perversion of government—unjust lawless or illegitimate The evil of tyranny for them lies *in the enslavement* of men who deserve to be free who should govern themselves or at least should be governed for their own good not exploited by a ruler who uses them for his own private interests

Some writers like Montesquieu who tend to identify despotism and tyranny see little difference between subjection and slavery regarding both alike as degradations Yet Montesquieu—and with him Aristotle—also thinks that for certain races of mankind subjection or slavery may be justified Mill later makes the comparable point that for a people at a certain stage of political development subjection may be necessary for a time in preparation for citizenship The two basic distinctions in political status which are here implied —between slavery and subjection and between subjection and citizenship—are developed more fully in the chapter on CITIZEN The first of these distinctions relates to the difference in the condition of men under tyranny and under benevolent despotism the second to the difference in the condition of men under absolute and under constitutional government

The other sense in which the word slavery seems always to be used with the connotation of evil is the sense in which Augustine speaks of man s slavery to lust as a consequence of original sin or in which Spinoza writes of human bondage—the condition of men enslaved by the tyranny of their passions—as compared with human freedom under the rule of reason This meaning of slavery is discussed in other chapters such as EMOTION and LIBERTY

The slavery which results from the tyranny of the passions is a disorder from which any man may suffer it stems from a weakness in the human nature which is common to all *Similarly the slavery of a whole* people under tyrannical rule is a perversion of government for all the members of the community not just for some But whenever slavery is defended it is justified only for *some men* within a community not for all or if for a whole people not for all mankind but only for *certain peoples* under certain conditions With regard to slavery the basic issue of justice is, therefore whether *some* men should be slaves or *all* should be free not whether *all* should be slaves or *all* free

THE DISTINCTION BETWEEN the slavery of some men within a community and the enslavement of a whole people appears to be related to the distinction between economic and political enslavement *In the ancient meaning* of the word economic the economic slave is the slave of the household or family A complete household writes Aristotle consists of slaves and freemen The elements of a family are

master and slave husband and wife father and children

That the distinction between slave and free man signifies economic rather than political status for Aristotle and for the ancients generally seems to be indicated by the fact that under certain types of oligarchical constitution free men are excluded from citizenship without thereby becoming slaves But in all ancient republics democratic as well as oligarchical slaves are ineligible for citizenship

Though the relation of master and slave is essentially economic rather than political such slavery has a political aspect in the sense that some men have no function in the state except to serve other men. Aristotle speaks of them as necessary to the state but not as are citizens parts of it. 'The necessary people he says are either slaves who minister to the wants of individuals or mechanics and laborers who are the servants of the community

The mark of economic slavery seems to be the kind of work a man does and the conditions under which he labors whereas political slavery seems to depend upon the kind of life a man leads and the conditions under which he lives in society The economic slave serves a master by his work The political slave lives under a tyrant In Aristotle s view it is only the man who is economically free who has anything to lose from being enslaved by a tyrant No free man if he can escape from it will endure such government he writes but the barbarians who are by nature slaves do not rebel against tyranny Where some men are by nature free there is also a natural distinction between women and slaves but among barbarians according to Aristotle no distinction is made between women and slaves because there is no natural ruler among them they are a community of slaves male and f male

The difference between economic bondage—which can include what Marx calls the wage slavery of the proleta iat as well s chattel slavery and other forms of serfdom—and the political condit on of those enslaved by a tyrant does not seem to affect the issue of just ce Those like Hobbe and Locke who think that the vanqu shed n ar must pay for be ng allowed to live by subm tting to slavery do not seem concerned whether the servitude takes the form of private possession by an individual master or the subjugation of a whole people by the conquering state Nor do those like Aristotle and Montesquieu who regard some men or some races as naturally servile seem to offer reasons for political slavery different from those which they think justify economic servitude

What does seem to affect the issue concerning the justice of slavery is the difference between the natural slave and the slave by force or law This is the difference between the man who is born a slave (not merely born of slaves and into slavery) and the man who born with a nature fit for freedom is made a slave either because his parents before him were slaves because he is sold into slavery or because for one reason or another he forfeits his birthright to freedom

If no men are by nature slaves then the only questions of justice concern the conditions which justify making slaves of free men These may remain the only questions even if there are natural slaves since it cannot be unjust to treat as slaves those who are by nature slaves any more than it is unjust to treat animals as brutes

In both cases some consideration may be given to how slaves or animals should be treated 'The right treatment of slaves Plato declares in the *Laws* is to behave properly to them and to do to them if possible even more justice than to those who are our equals Justice also requires according to Plato that if a slave or an animal do any harm the master shall pay for the injury

WE HAVE ALREADY observed that with regard to natural sl very the main issue i one of f ct The fact n question concerns human equality and in qual ty W thin that equality of all men whi h rests upon their common possession of human nature are some men by nature inferior to others in the r use of reason or their capacity for leading the life of reason? Does such inferiority prevent them from d recting their own lives or even their own work to the ends which are the natural fulfillment of man s powers? And if so do not such men p ofit from being d rect d by their super ors as well as from serving them and through serving them,

participating in the greater good their betters are able to achieve?

These are the questions of fact which Aristotle seems to answer affirmatively as he develops his theory of natural slavery If the facts are granted then no issue of justice arises for Aristotle can say that the slave by nature and the master by nature have in reality the same interests It is by the justice inherent in the relation of master and slave *when both are naturally so related* that Aristotle can criticize the injustice of all *conventional* forms of slavery But the question of fact must be faced as Aristotle himself is aware

Is there any one intended by nature to be a slave he asks and for whom such a condition is expedient and right or is all slavery a violation of nature? Aristotle recognizes that others affirm the rule of a master over slaves to be contrary to nature and that the distinction between slave and free man exists by law only and not by nature and being an interference with nature is therefore unjust He himself questions the justice of making slaves of captives taken in war for that may violate the natures of men of high rank who have had the misfortune to be captured or sold But he thinks that the same kind of difference which exists between male and female—the male being by nature superior the female inferior the one ruling the other submitting to rule—can be extended to all mankind

Where there is such a difference Aristotle explains as that between soul and body or between men and animals the lower sort are by nature slaves and it is better for them as for all inferiors that they should be under the rule of a master For he who can be and therefore is, another s and he who participates in a rational principle enough to apprehend but not to have such a principle is a slave by nature whereas the lower animals cannot even apprehend a principle they obey their instincts. And indeed the use made of slaves and of tame animals is not very different for both with their bodies minister to the needs of life If men differed from one another in the mere forms of their bodies as much as the statues of the gods do from men all would acknowledge that the inferior class should be slaves of the superior And if this is true of the body how much more just that a similar distinction should exist in the soul It is clear then that some are by nature free and others slaves and that for these latter slavery is both expedient and right

According to the theory of natural slavery it is as good for the slave to have a master as for the master to have a slave This reciprocity of interest does not occur in legal or conventional slavery In both types of slavery the slave is a piece of property a possession Whether by nature or by institution a slave does not own himself he is another s man He may be called another s man Aristotle says who being a human being is also a possession Does this mean that the slave belongs wholly to the master in all that he is and has? He would seem to belong to his master insofar as he is a *possession* but not wholly—in all that he is and has—insofar as he is a *human being* Aristotle does not introduce such a qualification where he says that the slave is a part of the master a living but separated part of his bodily frame yet he adds where the relation of master and slave is natural they are friends and have a comon interest but where it rests merely on law and force the reverse is true"

Aristotle considers the difference between the natural slave and other forms of personal property whether domestic animals beasts of burden or the inanimate instruments used in the household for productive purposes Do slaves he asks have any excellence beyond and higher than merely instrumental and ministerial qualities of the sort to be found in tools and animals? Do they have virtues and if so then in what way will they differ from freemen?

Aristotle answers by saying that since they are men and share in the rational principle it seems absurd to say that they have no virtue But since the rational principle in them is weak and consists only in the ability to execute decisions—not to make them or to know the end for which they are made—the slave will have a capacity for only so much virtue as he requires enough virtue for example to prevent him from failing in his duty through cowardice or lack of self control

It is precisely because of his limited competence and virtue that the slave needs, and

profits by having a master Aristotle thinks that he is better off than the artisan out of bondage The slave shares in his master s life the artisan is less closely conn cted with him and only attains excellence in proportion as he becomes a slave The meaner sort of mechanic has a special and separate slavery and whereas the slave exists by nature not so the shoemaker or other artisan

The separate slavery of the artisan makes him more like an animal or an inanimate tool in the way he is used for according to Aristotle he is an instrument of production while the natural slave participates in his master s life by being an instrument not of production but of action The work the slave does enables the master to live well—to achieve the happiness of the political or contemplative life—and since life is action not production the slave is a minister of act on If the slave had in his own nature the capacity for human happiness he would not be by nature a slave nor be limited to the good of serving another man s happiness

Slaves and brute animals cannot form a state Aristotle says because the state exists for the sake not of life but the good life and slaves have no share in happiness or in a life of free choice No one ass gns to a slave a share in happiness he says in another place unless he assigns to him also a share in human life At best that share could come only from being a part of the master and contributing to the master s happiness But though to this ex tent the slave by nature and the master by nature have in reality the same interests the rule under which the slave lives is neverthe less exercised primarily with a view to the inter est of the master

ARISTOTLE S DOCTRINE OF natural slav ry is re jected by those who affirm the fundamental equality of all men in the r common humanity and who in addition ins st that th r inequ lity as individuals in talent or capac ty should not affect their status or determine their treatment On these grounds Roman Sto cs and Christian theologians seem to agree—and with them such modern th nkers as Rousseau Kant Hegel and Mill—that all men are by nature born to be free Freedom writes Kant belongs to every man in virtue of his Human ty There s in deed an innate Equality belonging to every man which consists in his right to be independ ent of being bound to others in virtue of which he ought to be *his own master by Right* That all persons are deemed to have a *right* to equality of treatment seems to follow for Mill from the principle that one person s happiness supposed equal in degree (with the proper al lowance made for kind) is counted for exactly as much as another s The equal claim of everybody to happiness involves an equal claim to all the means of happiness among th m freedom

But though theologians like Augustine and Aquinas deny that slavery is instituted by nature they do not seem to regard it as con trary to natural law or to the will of God Something can be according to natural law in two ways Aquinas says First because nature inclines thereto Secondly because nature does not require the contrary Just as we can say in the second sense that nakedness is natural for man because nature did not give him clothes, but art invented them so we can say that all men are by nature free because slavery was not instituted by nature but de vised by human reason for the benefit of human life

The institution of slavery whereby one man belongs to another for his use seems due to the fallen nature of man as one of the penal conse- quences of original sin If man had remained in a state of innocence one man would have ruled another for the latter s good but no man would have been the master of slaves to be used for the master s good Since it is a grievous matter to anyone to y eld to another what ought to be one s own it follows says Aquinas that such dominion necessarily mplies a pain inflicted on the subj ct This painfulnes of slavery in turn seems to imply a contradiction to Aristotle s view that slavery fits cert in natures and is for their benefit

By nature as God first created us writes Augustine no one is the slave either of man or of sin Both sorts of slavery are introduced by sin and not by nature Both ar punish ments for sin though on seem to Augu t ne mo e grievous than the other It is a happier th ng he says to be the slave of a man than of a lust for even this very lust of ruling

lays waste men s hearts with the most ruthless dominion Moreover when men are subjected to one another in a peaceful order the lowly position does as much good to the servant as the proud position does harm to the master

Not sin but climate according to Montesquieu is the cause of slavery and to some extent its excuse Though he thinks that the state of slavery is in its own nature bad neither useful to the master nor to the slave Montesquieu like Hippocrates before him regards the Asiatics as reduced to servility by the physical conditions of their life There reigns in Asia he writes a servile spirit which they have never been able to shake off Under Asiatic despotism where whole peoples live in political servitude domestic slavery is more tolerable than elsewhere In those countries where the excess of heat enervates the body and renders men so slothful that nothing but the fear of chastisement can oblige them to perform any laborious duty slavery is more reconcilable to reason

Montesquieu seems to accept Aristotle s doctrine with some qualifications Aristotle endeavors to prove that there are natural slaves but what he says is far from proving it If there be any such I believe they are those of whom I have been speaking Slavery is both natural and unnatural As all men are born equal Montesquieu declares slavery must be accounted unnatural though in some countries it be founded on natural reason Natural slavery then is to be limited to some particular parts of the world But in arguing the right of Europeans to make slaves of the negroes he concludes with the equivocal remark that it is impossible for us to suppose these creatures to be men because allowing them to be men a suspicion would follow that we ourselves are not Christians

Hegel s comment on the enslavement of African negroes by Europeans runs somewhat differently Bad as this may be he writes their lot in their own land is even worse since there a slavery quite as absolute exists But though Hegel thinks that the negroes are naturally given to slavery he regards the natural condition itself as one of absolute and thorough injustice To remove this injustice however is not easy Man must be matured for freedom Hegel writes The gradual abolition of slavery is therefore wiser and more equitable than its sudden removal

Mill also looks upon slavery as a stage in the rise of certain peoples from savagery to political life and maintains that the transition to freedom must be gradually effected A slave properly so called he says is a being who has not learnt to help himself He is no doubt one step in advance of a savage He has not the first lesson of political life still to acquire He has learnt to obey But what he obeys is only a direct command It is the characteristic of *born* slaves to be incapable of conforming their conduct to a rule or a law They have to be taught self government and this in its initial stage means the capacity to act on general instructions Extenuations of the injustice of ruling men as slaves such as those proposed by Hegel and Mill are rejected by Rousseau

The notion that some men are by nature slaves whether in Asia or in Europe seems to Rousseau to be an illusion due to the fact that those who are made slaves by force have had their natures debased to slavishness Aristotle he says took the effect for the cause Nothing can be more certain than that every man born in slavery is born for slavery Slaves lose everything in their chains even the desire of escaping from them If then there are slaves by nature it is because there have been slaves against nature Force made the first slaves, and their cowardice perpetuated the condition

It is sophistry he thinks for philosophers to attribute to man a natural propensity to servitude because the slaves within their observation are seen to bear the yoke with patience they fail to reflect that it is with liberty as with innocence and virtue the value is known only to those who possess them and the taste for them is forfeited when they are forfeited themselves

The issue concerning slavery as a social or legal institution does not seem to be resolved by the views men take of natural slavery Aristotle who holds that *only* natural slavery is justified criticizes those who affirm to be unjust and inexpedient in their own case what they are not ashamed of practising towards others they demand just rule for themselves,

he writes but where other men are concerned they care nothing about it Such behavior is irrational unless the one party is and other is not born to serve This cannot be determined by conquest Aristotle questions therefore the convention by which whatever is taken in war is supposed to belong to the victors or the principle that because one man has the power of doing violence and is superior in brute strength another shall be his slave and subject Those who assume that slavery in accordance with the custom of war is justified by law are confronted by Aristotle with the question What if the cause of the war be unjust?

Hobbes and Locke appear to take an opposite view Men in a state of nature are free though they can actually enjoy only as much freedom as they have power to secure Yet the natural inequality in their powers does not establish a natural right on the part of the stronger to en slave the weaker Hobbes makes the right of mastership or what he calls despotical domin ion depend not merely upon victory in war but upon a covenant into which the vanquished enter voluntarily when the vanquished to avoid the present stroke of death covenanteth that so long as his life and the liberty of his body is allowed him the victor shall have the use thereof at his pleasure Only after such covenant is made the vanquished is a serv ant and not before It is not therefore the victory that giveth the right of dominion over the vanquished but his own covenant That Hobbes means chattel slave when he says serv ant seems to be ind cated by his remark that the master of the servant is master also of all he hath and may exact the use thereof that is to say of his goods of h s labour of his servants and of his children as often as he shall think fit

Locke disagrees with Hobbes that one man can give another the right to enslave him by contracting to become a slave in order to avoid death A man not having the power of his own life he writes cannot by compact or his own consent enslave himself to anyone No body can give more power than he has himself and he that cannot tak away his o vn life can not give another power over it As among the ancient Jews men can sell themselves into temporary service to requ te a debt But th s was a kind of drudgery not slavery the per son sold was not under an absolute arbitrary despotical power for the master could not have the power to kill him at any time whom at a certain time he was obliged to let go free out of his service No Jew Aquinas concurs could own a Jew as a slave absolutely but only in a restricted sense as a hireling for a time And in this way the Law permitted that through stress of poverty a man might sell his son or daughter

Absolute slavery for Locke is nothing else but the state of war continued between a law ful conqueror and a captive It is lawful he thinks to kill a violent aggressor for to that hazard does he justly expose himself whoever introduces a state of war and is aggressor in it But he who has forfeited his life necessarily for feits his freedom Slaves then are those who being captives taken in a just war are by right of nature subjected to the absolute dominion and arbitrary po ver of their masters In contrast to the limited servitude which a man can contract for wages absolute slavery is the effect only of forfeiture which the aggressor makes of his own life when he puts himself into the state of war with another

Against Locke and Hobbes as well as Aris totle Rousseau denies that there is any justice in slavery—by nature by covenant or com pact or by right of war To think as Hobbes appears to that the ch ld of a slave comes into the world as a slave is in Rousseau s opinion to say that a man shall come into the world not a man Holding that slavery is contrary to nature Rousseau also holds that it cannot be authorized by any right or law A man can not alienate his freedom by selling himself into slavery for to renounce liberty is to renounce be ng a man

In Kant s language a contract by which the one party r nounces his *whole* freedom for the adv ntage of the other ceasing ther by to be a person and consequently having no duty even to observe a contract is self contradictory and is therefore of itself null and void Agreeing that such a contract is a nullity Hegel holds that the slave has an absolute right to f himself but he adds that if a man is a lave his own will is responsible for his sl very Hence the wrong of slavery lies at the door not simply of enslave s or conquerors but of the slaves and the conque ed themselves

As for Grotius and the others who find in war another origin for the so called right of slavery —on the ground that the victor having the right of killing the vanquished the latter can buy back his life at the price of his liberty —Rousseau thinks their argument begs the question The right of conquest he says has no foundation other than the right of the strongest If war does not give the conqueror the right to massacre the conquered peoples the right to enslave them cannot be based upon a right which does not exist

Since Rousseau denies that victory gives the victors a right to kill those who have laid down their arms he regards it unfair to make the captive buy at the price of his liberty his life over which the victor holds no right From whatever aspect we regard the question he concludes the right of slavery is null and void not only as being illegitimate but also because it is absurd and meaningless The words *slave* and *right* contradict each other and are mutually exclusive

In modern as well as ancient times in the European colonies in the New World if not in Europe itself slave labor characterizes a certain type of economy and determines the mode of production especially in agriculture and mining The slave as chattel is bought and sold like other property He may be a source of profit to his owner in exchange as well as in production The traffic in slaves depends upon an original acquisition either through the spoils of war or by the activity of slave traders who hunt men as if they were animals to transport them in chains and sell them into slavery

In the ancient world individual slave owners emancipated their slaves even as under modern feudalism a great landowner like Prince Andrew in *War and Peace* freed his serfs Aristotle speaks of those in his own time who opposed the institution of slavery and the Roman Stoics did a great deal to ameliorate the condition of the slave and to protect him legally against abuse But there seems to have been no political party or active political movement among the ancients corresponding to the abolitionists and their struggle in the 18th and 19th centuries Even then however the abolitionists were looked upon as a radical minority who had no respect for the rights of property in their over zealous sentimentality about the rights of men Those who were willing to outlaw the African slave trade as outrageous were less outraged by the treatment of men as chattel once they were possessed

Madison for example referring to the prohibition affecting the importation of slaves into the United States which the Constitution postponed until 1808 thinks it a great point gained in favor of humanity that a period of twenty years may terminate forever within these States a traffic which has so long and so loudly upbraided the barbarism of modern policy But in another paper the writers of *The Federalist* present their version of the Southern argument defending the Constitution s apportionment of representation determined by adding to the whole number of free persons including those bound to service for a term of years and excluding Indians not taxed three fifths of all other persons They do not object to the view of the negro slave as two-fifths property and three fifths a person confessing themselves reconciled to reasoning which though it may appear a little strained in some points appeals to a principle they themselves approve namely that government is instituted no less for the protection of property than of persons

There are even those in the 18th century who defend the slave trade Boswell reports an argument set forth by Dr Johnson in favor of granting liberty to a negro who claimed his freedom before a Scottish Court of Session The sum of Dr Johnson s argument according to Boswell came to this No man is by nature the property of another the defendant is therefore by nature free The rights of nature must be in some way forfeited before they can be justly taken away and if no proof of such forfeiture can be given we doubt not but the justice of the court will declare him free Admitting that Johnson may have been right in the particular case at hand Boswell protests his general attitude toward slavery and the slave trade

To abolish a status Boswell writes which in all ages God has sanctioned and man has continued would not only be robbery to an innumerable class of our fellow-subjects but it

would be extreme cruelty to the African sav ages a portion of whom it saves from massacre or intolerable bondage in their own country and introduces into a much happier state of life especially now when their passage to the West Ind es and their treatment there is hu m nely r gulated

Issues of justi e a ide economists like Smith and Marx question the productivity of slave la bor Improvements in machinery are least of all to be expected writes Smith when the *proprietors employ slaves for their workmen* The experience of all ages and nations I be lieve demonstrates that the work done by slaves though it appears to cost only their maintenance is in the end the dearest of any A person who can acquire no property can have no interest but to eat as much and to labor as little as possible He explains the lack of me chanical progress in Greece and Rome by the fact that slaves are very seldom inventive and all the most important improvements in machinery or in the arrangement and distri bution of work which facilitate and abridge labor have been the discoveries of free men

Marx also judges production by slave labor to be a costly process The principle uni versally applied in this method of production is to employ the rudest and heaviest imple ments and such as are difficult to damage owing to their sheer clumsiness In the slave states bordering on the Gulf of Mexico down to the date of the civil war ploughs constructed on old Chinese models which turned up the soil like a ho or a mole instead of making furrows were alone to be found

But Marx does not limit his judgment of slav ery to criteria of efficiency nor does he limit his consideration of servitude to its more obvi ous forms of chattel slavery and feudal serfdom For him all use of labor by those who own the instruments of production involves exploita tion it differs only in the degree to which the owner derives a surplus value from the labor power he possesses through property rights or wage payments

According to Marx the essential difference between the various economic forms of soc ety between for inst nce a society based on slave labor and one based on wage labor l s only in the mode in which this surplus labor is in each cas extracted from the actual producer the la borer As all the value produced by a slave in excess of the cost of keeping him alive profits his owner so during the period of surplus labor the usufruct of the labor power creates a value for the capitalist that costs him no equiv alent In this sense it is that surplus labor can be called unpaid labor —whether it is the labor of chattel or wage slaves

Because a laborer is forced to sell his labor power *in the open market in order to subsist* Marx regards his so-called freedom as a pious fiction The contract by which he sold to the capitalist his labor power proved in black and white Marx writes that he disposed of him self freely The bargain concluded it is discov ered that he was no free agent that the time for which he is free to sell his labor po er is the time for which he is forced to sell it

Others take the view that there is a funda mental moral difference between chattel slaves and men who work for wages Hobbes for ex ample thinks that between slaves who are bought and sold as beasts and servants to whose service the masters have no further right than is contained in the covenants made be twixt them there is only this much in com mon— that their labor is appointed them by another In slightly varying terms Aquinas Locke and Kant make a similar distinction be tween the free servant or paid worker and the slave The point is summarized by Hegel as a difference between alienating to someone else products of my particular physical and mental skill and alienating the whole of my time as crystallized in my work In the latter case I would be making into another s property the substance of my being

D bat ng with Douglas Lincoln ins sted that pol tical freedom was th d ffe ence be tween the wh te slaves of the North and the bl ck slaves of the South The legal right won by the proletariat to organize and strike seems to be a difference which Marx himself recog n zes between the wage earner and the bonded slave Until his cha ns are struck the slave is not in the position of the free wo k gm n to fight for political ghts and privileges Citizen ship is not al ays e tended to the laboring classes but it is never conferred upon slaves

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred t For example in **4** HOMER *Il d* BK II [265 283] **12d** the number **4** is the number of the volume n the set the number **12d** indicates that the p sage is in section d of pa e 12

PAGE SECTIONS When the te t is printed in one column the letters **a** and **b** refer to the upp r and lo er halves of the p ge For example in **53** JAMES *Psych l gy* **116a 119b** the passage begins in the upper half of page 116 and ends in the lower half of pa e 119 When the text is printed in two olumns the letters **a** and **b** refer to the upper and lower halves of th left hand side of the page the letters and **d** to the upper and lower halves of the r ght hand side of the pa e For example in **7** PLATO *Symp sium* **163b 164c** the passage b gins in the lower half of the left hand side of pa e 163 and ends in the upper half of the right hand side of page 164

AUTHOR S DIVIS ONS One or more of the main divisi ns of a work (such as PART BK CH SECT) are metimes included in the reference line numbers in brackets are given in cer tain cases *e g Iliad* K II [265–283] **12d**

Chapter 88 SOUL

INTRODUCTION

IN the language of the poets as well as in the discourse of the philosophers body and soul are correlative terms Each affects the meaning of the other The words are used together in daily speech Men who are unaware of or deny the metaphysical and theological significance of having a soul nevertheless use the word soul with a sense of contrast to body even if only to refer to vague manifestations of spirit —feelings and sympathies which seem to be alien to the world of matter

With few exceptions traditional theories of the soul involve its distinction from and relation to the body Berkeley represents one of the major exceptions Denying the reality of matter he conceives the soul as existing in and by itself souls or spirits differ from God as finite from infinite spiritual beings The something which knows and perceives and which exercises divers operations as willing imagining remembering Berkeley says is what I call *mind spirit soul* or *myself* Berkeley therefore would not speak of himself or other men as having souls but rather as *being* souls

The other major exception is exemplified by Lucretius It is not that Lucretius denies soul as Berkeley denies body Nor does he deny that soul adds something to body which differentiates living organisms from inorganic things On the contrary he declares the mind to be a part of man no whit less than hand and foot and eyes are parts of the whole living being Distinct from mind soul is also part of a living being Mind and soul are held in union one with the other and form of themselves a single nature but whereas the mind is as it were the lord or head of the whole body the rest of the soul spread abroad throughout the body obeys and is moved at the will and inclination of the mind

But when Lucretius refers to mind and soul as parts of the body he means no more than is implied in speaking of the hand and eye as parts of the body The nature of mind and soul is bodily he writes Just as flesh and bones are composed of atomic particles so the mind is formed of atoms exceeding small and smooth and round and the soul is made of very tiny seeds linked together throughout veins flesh and sinews

APART FROM THESE exceptions the traditional discussion of soul considers it as somehow conjoined with body to constitute a whole of which it is the immaterial principle or part Even those who like Descartes define the soul as an immaterial substance capable of existing by itself do not actually ascribe to the human soul complete independence of the human body Nor do the theologians who think of God as a purely spiritual being and of angels as immaterial substances attribute soul to them

Precisely because God and the angels do not have bodies neither do they have souls Whether everything which has a body also has a soul is another question It is variously answered but certainly those who like Plato and Plotinus speak of a world soul or a soul of the universe confirm the point that soul is the co principle or complement of body The same point appears in theories of the celestial bodies which conceive them as being alive and as therefore having souls

Unfolding to Socrates the story of the creation Timaeus says Using the language of probability we may say that the world became a living creature endowed with soul and intelligence by the providence of God To the world Timaeus explains God gave a body smooth and even having a surface in every direction equidistant from the centre a body entire and perfect and formed out of perfect

bodies And in the center he put th soul which he diffused throughout the body mak ing it also to be the exterior environment of it

Comparing the magnetic force of the lod stone with the animation of a soul Gilbert says that this one eminent property is the same which the ancients held to be a soul in the heavens in the globes and in the stars in sun and moon The ancient philosophers all seek in the world a certain universal soul and declare the whole world to be endowed with a soul Aristotle held that not the universe is animate but the heavens only As for us Gilbert writes we deem the whole world ani mate and all globes stars and this glorious earth too we hold to be from the beginning by their own destinate souls govern d Piti able is the state of the stars abject the lot of earth if this high dignity of soul is denied them while it is granted to the worm the ant the roach to plants and morels for in that case worms roaches moths were more beauteous objects in nature and more perfect inasmuch as nothing is excellent nor precious nor eminent that hath not a soul

On the question whether the earth ea h heavenly body or the whole world is endowed with life intelligence and soul Kepler differs from Gilbert Augustine from Plato and Plo tinus Aquinas from Aristotle Nevertheless the many sided controversy indicates the tra ditional connection of soul with life and mind on the one hand and with animate or organic bodies on the other—bodies which manifest certain properties and tendencies to motion

THE MAJOR ISSUES CONCERNING soul seem to follow from these traditional associations Does the soul which is somehow conjoined with a body exist as an immaterial substance or princi ple in such a way that the being composed of body and soul consists of two d st nct sub stances or entities united as related parts of a wl ole? Or is the soul the substantial form of an organic body with the consequence that the form an l matter together constitute a single composite substan e which is tl e living thing? In the latter alternative the unity of soul and body according to Aristotle is like that of tl e wax and tl e shape given to it by the die

On either conception of soul and its relation to body or matter further questions arise con cerning the soul s existence apart from the body Does it exist before being united to the body? Does it exist after the union is dissolved? How does it exist when it exists separately or apart from matter? For those like Lucretius who conceive the soul as itself composed of material particles within the framework of the body such questions can have little mean For those like Plato and Descartes who con ceive the soul as an immaterial entity having being in its own right these questions can be im mediately answered in favor of the soul s ca pacity for separate existence Only when th soul is conceived as a form wh ch together with matter constitutes the substance of a living body does there seem to be both meanin and difficulty to the question whether the soul con tinues to endure separately when a plant an animal or a man dies i e when such composite substances decompose

If the individual soul ceases to be when the body with which it is somehow united peri h s it is as mortal as the body The traditional theories of personal immortality—such as the Platonic myths concerning the transmi ration or reincarnation of souls and the Christian doctrine of man s immortal soul specially created for union with the body but destined to survive its separation from the body—are theories which involve conceptions of the soul as capable of self subsistence The controversy over these doctrines is dealt with in the chapter on IMMORTALITY Here are we concerned to see how different implications for immortality necessarily follow from various theories of the soul

Still other issues concerning soul arise in con nection with other chapters For example the question whether soul is to be found only in living things or only in animals but not in plants or in man alone is discussed in the chap ters on LIFE AND DEATH and on MIND If soul on any conception is the principle or cause of l fe then the distinction between animate and inanimate bodies is identical with the distinc tion between things which have and things which do not have a soul If furthermore the kind of life possessed by a vegetable or plant is radically different from animal lif and that in turn fro n human life then souls too may ha e

to be differentiated in kind according to the mode of life or the range of vital powers of which each type is the principle

Some writers however tend to equate soul with mind or understanding When as by Descartes soul is identified with rational soul or thinking substance it is usually attributed to man alone Soul is then not thought necessary to explain the phenomena of life in plants and animals at least in no sense of soul which implies either an incorporeal or a formal principle that is anything beyond the complex interaction of organic parts Other authors like Locke who conceive soul or understanding not merely in terms of rational thought but also in terms of sensation imagination and memory may exclude plants but not animals from the possession of soul or mind

Descartes takes notice of these ambiguities in the traditional use of the word soul Probably because men in the earliest times he writes did not distinguish in us that principle in virtue of which we are nourished grow and perform all those operations which are common to us with the brutes from that by which we think they called both by the single name *soul* then perceiving the distinction between nutrition and thinking they called that which thinks *mind* believing also that this was the chief part of the soul But I perceiving that the principle by which we are nourished is wholly distinct from that by means of which we think have declared that the name *soul* when used for both is equivocal and I say that when soul is taken to mean the *primary actuality* or *chief essence of man* it must be understood to apply only to the principle by which we think and I have called it by the name *mind* as often as possible to avoid ambiguity for I consider the mind not as part of the soul but as the whole of *that soul* wh ch thinks

In another place he uses the word soul to stand for that subtle fluid styled the animal spirits which pervading the o gans of brute animals accounts for the r peculiar type of animation We can recognize no principle of motion in them beyond the d sposition of their organs and the continual discharge of the animal spirits that are produced by the beat of the heart as it rarefies the blood Soul in th s sense is not to be confused with the incorporeal and spiritual nature of man s soul It is something corporeal of a fine structure and subtle spread throughout the external body and the principle of all sensation imagination and thought Thus there are three grades of being Body the Corporeal or soul and Mind or spirit

IN THE OPENING PAGES of his treatise *On the Soul* Aristotle says that to attain any assured knowledge about the soul is one of the most difficult things in the world The d fficulty seems to apply both to *what the soul is* and to *whether it exists* The questions are connected Even Lucretius who regards the soul as material in nature does not claim to know its existence by direct observation It is not like the body itself or like other parts of the body a sensible object It must be inferred to exist Just as the existence of unobservable atoms is inferred in order to explain the constitution and change of all natural objects so the existence of soul is inferred in order to explain the constitution and motion of living things Those who conceive the soul as immaterial—whether as substance principle or form—would seem to face an even greater difficulty in establishing its existence and in describing its nature Admittedly the soul as some sort of immaterial being cannot be discovered by observation and experiment The alternatives which represent traditional solutions of the problem seem to include the soul s reflexive knowledge of its own existence inferential knowledge about the soul based on ob erved facts various religious beliefs concerning the nature and destiny of the soul and the postulation of the soul s existence on practical not theoretic grounds

Not all writers agree with Aristotle that the soul is an object difficult to know or with Kant that it is absolutely mpos ible for us to reach any sound theoretic conclusions about the soul s exist nce Descartes for example says that if there are any persons who are not sufficiently persuaded of the existence of God and of the soul by the reasons which I have brought forward I wish them to know that all other things of which they perhaps think themselves more assur d (su h as possess ng a body and that there are stars and an earth and so o) are less ce tain

The argument for the soul s existence which

precedes this remark is the famous *Cogito ergo sum*— I think therefore I am From the fact that in the very act of doubting the existence of everything else he could not doubt that he was doubting and hence thinking Descartes assures himself of his own existence or more precisely of the existence of himself as a thinking being I knew he writes that I was a substance the whole essence or nature of which is to think and that for its existence there is no need of any place nor does it depend on any material thing so that this me that is to say the soul by which I am what I am is entirely distinct from body and is even more easy to know than is the latter and even if the body were not the soul would not cease to be what it is

Locke appears to agree that if I doubt of all other things that very doubt makes me perceive my own existence and will not suffer me to doubt of that I have as certain perception of the existence of the thing doubting he goes on as of that thought which I call doubt Experience then convinces us that we have an intuitive knowledge of our own existence and an internal infallible perception that we are

But Locke does not turn the proposition that a thinking being exists into the assertion that a spiritual being the soul as an immaterial substance exists We have the idea of matter and thinking he writes but possibly shall never be able to know whether any mere material being thinks or no it being impossible for us by the contemplation of our own ideas without revelation to discover whether Omnipotency has not given to some systems of matter fitly disposed a power to perceive and think or else joined and fixed to matter so disposed a thinking immaterial substance it being in respect of our notions not much more remote from our comprehension to conceive that God can if he pleases superadd to matter a faculty of thinking than that he should superadd to it another substance with a faculty of thinking

For Locke however our idea of soul is as clear as our idea of body Our idea of body he says, is an extended sol d substance capable of communicating motion by impulse and our idea of soul as an immaterial spirit is of a substance that thinks, and has a power of exciting motion in body by willing or thought I know that people whose thoughts are immersed in matter and have so subjected their minds to their senses that they seldom reflect on anything beyond them are apt to say that they cannot comprehend a thinking thing which, perhaps is true but I affirm when they consider it well they can no more comprehend an extended thing And in another place he adds If this notion of immaterial spirit may have perhaps some difficulties in it not easy to be explained we have therefore no more reason to deny or doubt the existence of such spirits, than we have to deny or doubt the existence of body because the notion of body is cumbered with some difficulties very hard and perhaps, impossible to be explained or understood by us

Berkeley differs from Locke not only in maintaining that we have no idea of matter at all but also in holding that if we use the word idea for sense impressions or the imag s derived from them we can have no idea of soul or spiritual substance But we can he thinks, form what he calls a notion of the soul which grasps the meaning of the word spirit as signifying that which thinks wills or perceives He differs from Locke further in proportion as he tends to agree with Descartes, asserting that the existence of a spiritual substance a thinking being necessarily follows from the undeniable existence of thinking itself

For both Descartes and Berkeley the immortality of the soul can be directly concluded from our knowledge of the soul s existence and nature The soul writes Berkeley is indivisible incorporeal unextended and it is consequently incorruptible Nothing can be plainer than that the motions changes decays and dissolutions which we hourly see befall natural bodies cannot possibly affect an active simple uncompounded substance such a being therefore is indissoluble by the force of nature that is to say the soul of man is naturally immortal

The arguments in Plato s *Phaedo* for the proper existence of the soul before it joins a particular body and for its existence after it leaves the body to dwell apart before entering another body—arguments in short for the

soul s immortality—seem to stem from a slightly different principle It is not merely that the soul is simple or uncompounded and hence indissoluble or that the knowledge we have of the absolute ideas requires us to posit a principle of knowledge other than the bodily senses which can apprehend only changing things In addition Socrates argues that the knower must be like the known If it is the soul which knows the unchangeable and eternal essences it must be as unchangeable and eternal as they are When the soul uses the body as instrument of perception Socrates says it is then dragged by the body into the region of the changeable

But when returning into herself she reflects then she passes into the other world the region of purity and eternity and immortality and unchangeableness which are her kindred

AGAINST ANY FORM of argument for the existence and immortality of the human soul which proceeds from the nature of our thought or knowledge Kant takes the position that the premises do not warrant the conclusion He claims to expose the fallacies in what he calls the paralogism of a rational psychology The I of the *Cogito ergo sum* may be the necessary logical subject of all our judgments but this does not give us intuitive knowledge of a really existing substance which has the attributes of simplicity spirituality and permanence or immortality

In all our think ng Kant writes the I is the subject in wh ch our thoughts are inherent nor can that I ever be used as a determination of any other thing Thus everybody is constrained to look upon himself as the substance and on thinking as the accident of his being But he goes on though the I exists in all thoughts not the slightest intuition is connected with that representation by which it might be dist nguished from other objects of intuition Hence it follo s that in the first syllo ism of transcendental psychology reason imposes upon us an apparent knowledge only by representing the constant logical subject as the knowledge of the real subject in hich that knowledge inheres Of that subject however we have not and cannot have th sl ghtest knowledge In spite of this the proposition that the soul is a substance may well be allowed to stand if only we see that this concept cannot help us on in the least or teach us any of the ordinary conclusions of rational psychology as for instance the everlasting continuance of the soul amid all changes and even in death and that it therefore signifies a substance in idea only and not in reality

Similarly with respect to the simplicity of the soul Kant contends that the absolute but merely logical unity of apper eption or thought is illegitimately converted into the absolute unity of a real substance The proposition *I am a simple substance* he declares teaches us nothing at all with reference to myself as an object of experience Its only value is to enable us to distinguish the soul from all matter and thus to exempt it from that decay to which matter is at all times subject

To this extent rational psychology may guard our thinking self against the danger of materialism The concept of the soul as an immaterial and simple sub tance may thus function regulatively but we deceive ourselves with the illusion of kno l d e when we treat that concept as if it had intuitive content—when as he says we change thoughts into things Kant does not deny that the I is substantial in concept or simple in concept Though th se propositions are incontestably true he says nevertheless what we really wish to know of the soul becomes by no means known to us in that way because all these predicates are with regard to intuition non valid entailing no consequences with regard to objects of experience and therefore entirely empty

The existence and immortality of the soul is for Kant a postulate or demand of the practical reason Of the psychic substance regarded as an i nmortal soul it is absolutely impossible to obtain any proof from a theo etical point of v ew but if such an object must be thought *a p iori* in order for pure practical reason to be used as duty commands it becomes what Kant calls matter of faith Immortality seems to him rationally required as th practically necessary condit on for the fulfillment of the moral law and the endl s progress of the soul towa d holin ss of will.

William J mes questions even such pract cal arguments for the soul The imperishabil ty of

a simple substance does not he thinks guarantee immortality of a sort *we care for* Nor following Locke does it seem to him that a substantial soul is required for personal identity and moral responsibility Writing as an empirical or scientific psychologist who feels entirely free to discard the word Soul because he finds the concept useless so far as accounting for the actually verified facts of conscious experience goes James tells those who may find any comfort in the idea that they are perfectly free to continue to believe in it for our reasonings have not established the non existence of the Soul they have only proved its superfluity for scientific purposes

JAMES CONCLUSION THAT the substantial Soul explains nothing and guarantees nothing along with the arguments of Kant and Locke may not apply to the soul conceived as the principle of life rather than as the agent of thought or to the soul conceived as the form of an organic body rather than as a spiritual being associated with or somehow imprisoned in the body Precisely because this other conception affirms reality of soul as something other than a complete substance precisely because it applies to plants and animals as well as men this other conception of soul would seem to require a different sort of criticism

The Greek and Latin words—*psyche* and *anima*—which we translate by soul seem to have life as their primary connotation In the *Cratylus* Socrates suggests that those who first used the name *psyche* meant to express that the soul when in the body is the source of life and gives the power of breath and revival Other dialogues express the Greek conception of the living thing as that which has the power of self motion and ascribe this power to the soul as source In the *Phaedo* for example Socrates asks What is that the inherence of which will render the body alive? to which Cebes answers Soul and agrees with Socrates further statement that whatever the soul takes possession of to that he comes bearing life In the *Laws* Cleinias having identified the power of self motion with life the Athenian Stranger gains his assent to the proposition that whatever has life or self motion also has soul

To this much Aristotle also agrees What has soul in it he says differs from what has not in that the former displays life to which he adds that living may mean thinking or perception or local movement or movement in the sense of nutrition and growth so that we must think of plants also as living and as having souls But Aristotle goes further In defining soul as the cause of life and in differentiating three kinds of souls—vegetative sensitive and rational—according to the vital powers manifested by the activities of plants, animals and men he uses his general theory of corporeal substances to state precisely what the soul is and how it is related to the body

Corporeal substances are according to him all composite of two principles form and matter What is called matter is potentiality what is called form actuality As exemplified in works of art wood is the matter which has the potentiality for a certain shape and a certain function that is the actuality or form of a chair In the case of natural things that which determines the essential whatness of a body is its form or as Aristotle sometimes says its formulable essence

If living things are essentially distinct from inert bodies as Aristotle supposes them to be then the forms which determine their essences must be different from the forms of inanimate substances It is this difference in forms which Aristotle appropriates the word soul to signify In each kind of living thing the soul is the substantial form or the first grade of actuality of a natural body having life potentially in it

He speaks of the first grade of actuality here to distinguish merely being alive or besouled from the various acts which as operations of the vital powers constitute living If an axe or an eye had a soul it would consist of its power to cut or to see not in its actually cutting or seeing While nourishing or thinking is actuality corresponding to the cutting and the seeing the soul is actuality in the sense corresponding to the power of sight and the power in the tool As the pupil *plus* the power of sight constitutes the eye so the soul *plus* the body constitutes the animal

From this conception of soul as the form or actuality of a living substance it indubitably

follows Aristotle says that the soul is in separable from its body or at any rate certain parts of it are—for the actuality of some of them is nothing but the actualities of their bodily parts Where Plato holds that the soul is prior in existence to the body Aristotle holds that soul and body come into existence together when the organism is generated Where Plato attributes an independent mode of being to the soul distinct in character from that of bodies Aristotle says that the soul cannot be without a body Yet it cannot *be* a body it is not a body but something relative to a body That is why it is *in* a body and a body of a definite kind being nothing more than the actuality or formulable essence of somethin that possesses the potentiality of being besouled

FURTHER CONSEQUENCES follow from these con flictin conceptions of soul In the *Timaeus* Plato advances the view that only the lo vest grade of soul—the pl nt soul—is mortal in contrast to the souls of animals and men Aristotle would seem to attribute mortality to every grade of soul If any exception is to be made it is only for the human soul because it involves the power of rational thought Mind or the po ver to think he writes seems to be a widely different kind of soul differing as what is eternal from what is perishable

The critical point is whether thinking unlike all other psychic powers is an activity of the soul alone For the most part there seems to be no case in which the soul can act or be acted upon without involving the body Thinking seems the most probable exception but Aristotle adds if this too proves to be a form of imagination or to be impossible without imagination it too requ res a body as the con dition of its existence If there is any way of acting or being acted upon proper to soul soul will be capable of separate existence if there is none its separate existence is im possible

Is there any way of acting or being acted upon proper to soul? Aristotl seems to answer this question affirmatively when he says that insofar as the realit es it knows are capable of being separated from their matter so is it also with the po vers of m nd On one interpreta tion this means that the mind or intellect is as immaterial in its mode of operation as some of its objects are in their mode of being with the further consequence that what is capable of acting apart from body is also able to exist apart from body But whether Aristotle s fur ther statement that mind set free from its present conditions is immortal and eternal applies to the intellect alone or to the rational soul as a whole has been disputed by various interpreters Adopting Aristotle s conception of soul as the form which is the actuality of life in an organic body Aquinas for one seems to think that the immortality of a rat onal soul can be demonstrated from the special character of its intellectual powers

A theory of the soul which regarded it as a simple and incorporeal substance or as having a being independent of the body would seem to harmonize more readily with the Christian belief in the human soul s special creation and its individual survival after death But Aquinas rejects such a theory on the ground that then man would be two substances or two beings not one or else if the human person is identified with the soul man would be a soul using a body rather than a single substance of com posite nature The doctrine of body and soul which holds them to be related as matter and form preserves the unity of man and in the opin on of Aquinas fits the way in which man learns through his senses exper ences passions and in thinking depend upon imagination

But though he admits that men cannot think without images Aquinas also insists contrary to Locke that thinking insofar as it involves abstract concepts cannot be performed by matter To make matter think is beyond even the power of God Unlike nourishing or sens ing *under tanding* is not and cannot be the act of a body nor of any corporeal power

This theory—that the acts of understanding by wh ch the intellect abstracts and receives universal concepts cannot be accounted for by the motions of the brain—is further discussed in the chapter on UNIVERSAL AND PARTICULAR Here we are con erned s mply to note th t fo Aqu nas the fact that th concepts ith wh ch men think are universal mea s that they are ab tracted from matter and the fact that they a abstract d f om matter means that

various acts of understanding must also be immaterial—that is not acts of bodily organs like the brain To these premises Aquinas adds one further principle namely that a thing s mode of being is indicated by its mode of operation In these terms he concludes that since the intellect has an operation *per se* apart from the body the human soul which is called rational because of its power of understanding can have a being *per se* apart from the body Hence it is something incorporeal and subsistent

Nevertheless according to Aquinas though the human soul can subsist separately it belongs to its nature to be embodied that is to be the form of a material substance The soul as part of human nature he writes has its natural perfection only as united to the body Therefore it would have been unfitting for the soul to be created without the body Furthermore if the entire nature of man were to be a soul—the soul making use of the body as an instrument or as a sailor uses a ship —there would be no need for the resurrection of the body after the Last Judgment The Christian dogma of the resurrected body more properly accords in Aquinas view with a conception of soul united to the body as form to matter for as he says in another place if it is natural to the soul to be united to the body it is unnatural for it to be without a body and as long as it is without a body it is deprived of its natural perfection

In the consideration of the relation of body and soul an opposite estimation of the body s role goes with an opposite theory of the soul s nature Socrates in the *Phaedo* describes the body as the soul s prison house or worse the source of the soul s contamination by the impurities of sense and passion In this life he says we make the nearest approach to knowledge when we have the least possible intercourse or communion with the body and are not surfeited with the bodily nature But complete purification requires the separation of the soul from the body the release of the soul from the chains of the body That is why Socrates tells his friends gathered in the cell where he is to drink the hemlock, true philosophers are ever seeking to release the soul and are always occupied in the practice of dying

It is also the opinion of Plotinus that it is evil for the soul to be in the body But Christian theologians for the most part take a contrary view Aquinas for example criticizes Origen for holding that souls were embodied in punishment of sin To him there is nothing of a penal and afflicting nature in the soul s union with the body Though Scripture says that the corruptible body weigheth down the soul and the earthly tabernacle presseth down the mind Augustine interprets this to mean not that the flesh is evil in itself but that man is beset by sin when the flesh lusteth against the spirit

There is no need therefore according to Augustine that in our sins and vices we accuse the nature of the flesh to the injury of the Creator for in its own kind and degree the flesh is good Man is both body and soul human nature is a thing of both flesh and spirit and he who extols the nature of the soul as the chief good Augustine continues and condemns the nature of the flesh as if it were evil as suredly is fleshly both in his love of the soul and his hatred of the flesh

OUTLINE OF TOPICS

1 Conceptions of soul

1a Soul as the ordering principle of the universe the world soul and its relation to the intellectual principle the souls of the heavenly bodies

1b Soul as the principle of self motion or life in living things soul as the form of an organic body

1c Soul as the principle of distinction between thinking and non thinking beings the identity or distinction between soul and mind or intellect

1d Soul as the principle of personal identity the doctrine of the self the empirical and the transcendental ego

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to For example in **4** HOMER *Iliad* BK II [265 283] **12d** the number **4** is the number of the volume in the set the number **12d** indicates that the passage is in section d of p ge 12

PAGE SECTIONS When the text is printed in one column the letters a and b refer to the upper and lo er halves of the pa e For example in **53** JAMES *Ps hology* **116a 119b** the passa e begins in the upper half of pa e 116 and ends in the lower half of page 119 When the text is printed in two columns the letters a and b refer to the upper and lo er halves of the left hand side of the page the letters c and d to the upper and lower halves of the right hand side of the pa e For example in **7** PLATO *Symposium* **163b 164c** the passage begins in the lower h lf of the left hand side of pa e 163 and ends in the upper half of the right hand side of page 164

AUTHOR S DIVISIONS One or more of the main divisions of a work (such as PART BK CH SECT) are sometimes included in the reference l ne numbers in brackets are g ven in certain cases *e g* *Iliad* BK II [265 283] **12d**

BIBLE REFERENCES The references are to book chapter and verse When the King James and Douay versions differ in title of books or in the numbering of chapte s or verses the King James version is cited first and the Douay indicated by a (D) follows *e g* OLD TESTAMENT *Nehemiah* 7 45—(D) *II Esdras* 7 46

SYMBOLS The abbreviation esp calls the reader s attention to one or more especially relevant parts of a whole reference passim signifies that the topic is discussed intermit tently rather than contin ously in the work or passage cited

Chapter 89 SPACE

INTRODUCTION

ON the level of our everyday observations space and time seem to be the obvious the common and the connected properties of physical things We distinguish things from one another by their position in space as we mark happenings by the date of their occurrence The where and when of a thing is often used to identify it for it is generally agreed that two bodies cannot occupy the same place at the same time and that at the same time two dis tinct places cannot be occupied by the same body According to a theologian like Aquinas these limitations of space and time apply even to bodiless things *i e* to angels

An angel and a body are said to be in a place he writes in quite a different sense Whereas a body is in the place which contains it an angel is said to be in a corporeal place by applicat on of the angelic power not as being contained but as somehow containing it It follows nevertheless that at a given time an angel is not everywhere nor in several places but in only one place Nor does the incorporeality of angels permit more than one angel to be at the same time in the same place According to the *manner in which an angel is at a* place—by the action of his power— there can be only one an el in one place Aquinas declares even as there can be only one body in one place at a time

Location or position in space and spatial relationships such as higher and lower nearer and farther are so familiar and intelligible that they provide terms of reference whereby men speak metaphorically of the moral hierarchy and spirit ual distances The whole of Dante s *Divine Comedy* for example involves a spatial metaphor which sets forth the gradations of sin and the degrees of blessedness in terms of places beneath the earth and in the heavens above

As he mounts from sphere to sphere in Paradise Dante meets Piccarda Donati in the Heaven of the Moon She explains to him that this place which appears so far down is assigned to those who have violated their vows in some particular Dante wonders why she and the others do not desire a more exalted place in order to see more Piccarda replies Brother virtue of charity quiets our will and makes us wish only for that which we have and quickens not our thirst for aught else So that as we are from seat to seat throughout this realm to all the realm is pleasing as to the King who n wills us with His will and His will is our peace

This speech of Piccarda s makes it clear to Dante how everywhere in Heaven is Paradise even if the grace of the Supreme Good does not there rain down in one measure These different measures of beatitude in the diffusion of God s love and light are represented by the celestial spheres from the earth-adjacent moon to the Crystalline Heaven the outermost bound of the phys cal universe of which Dante says that it has no other Where than in the Divine Mind

WHEN THE WHOLE EXPANSE of physical space or the boundary of the universe is considered Newton no less than Dante conceives the omni presence and eternity of God as that which somehow encompasses all space and time God is not duration or space Newton writes at the end of the *Principles* but He endures and is present and by existing always and every where He constitutes duration and space In the concluding queries of the *Optics* Newton appears to think of infinite space as the D v ne Sensorium in whi h all things a e at once pres ent to God who being in all places is more able by His will to move th bod es within H s boundl ss unifo m sensor um and thereby to fo m and reform the parts of the Universe than

we are by our will to move the parts of our own bodies

The physicist does not have to turn theologian however to be confronted with the mysteries of space Even without the modern complication of the relation of its three dimensions to time as a fourth dimension the physical concept of space raises difficulties for analysis

In the tradition of western thought conflicting definitions of space seem to result from a fundamental difference in the object being defined—whether it is an inseparable property of bodies perhaps even identical with unformed matter or a reality apart from the bodies which move and have their being in it Sometimes this difference is signified by a difference between the meaning of the word place or extension and the meaning of space It appears also to be involved in the contrast between filled space and empty space (*i e* the void or vacuum) and it bears some relation to Aristotle s distinction between space and place and to Newton s distinction between absolute and relative space

The controversial character of space in physical theory may be appreciated in terms of these oppositions in meaning and the issues which they raise In addition physical theory is confronted with the problem of action at a distance (*i e* action through a void or through an ethereal medium) the problem of the infinity of space (or the question of a bounded or unbounded universe) and the distinction between one physical space and the variety of geometrical spaces

Space which at first seems easily apprehended by sense and susceptible to measurement becomes upon examination so subtle as to be almost a vanishing object Reason finds it difficult to say precisely *what* space is in itself and how it is related to matter and motion Even the familiar space of ordinary sense perception seems to have its puzzles A psychologist like James is concerned with how the different fields of touch vision and hearing coalesce to form the single space of our experience and in dealing with the process by which we learn to perceive the spatial manifold of positions and directions he cannot avoid the issue of innate as opposed to acquired space perception

PLATO S THEORY OF SPACE is set forth in the *Timaeus* as part of the likely story which Timaeus tells about the production and constitution of the universe The sensible things which come into being and pass away are according to him patterned after the eternal forms To the eternal patterns and their copies in the world of change Timaeus finds it necessary to add a third factor in order to account for the physical elements and their generation This factor he says is difficult to explain and dimly seen It is the receptacle and in a manner the nurse of all generation In contrast to the elements which are perpetually changing into and out of one another the receptacle never departs from her own nature and never in any way assumes a form like that of any of the things which enter into her The forms which enter into and go out of her are the likenesses of real existences modelled after their patterns in a wonderful and inexplicable manner

Timaeus distinguishes the three principles as that which comes to be and passes away in the process of generation that in which the generation takes place and that which the generated thing resembles and which is its source He likens the receptacle or receiving principle to a mother the source to a father and the intermediate nature to a child and adds that if the model is to take every variety of form then the matter in which the model is fashioned will not be duly prepared unless it is formless and free from the impress of any of those shapes which it is hereafter to receive from without.

Wherefore that which is to receive all forms should have no form The mother and receptacle of all created visible and in any way sensible things is not to be termed earth or air or fire or water or any of their compounds or any of the elements from which these are derived but is an invisible and formless being which receives all things and in some mysterious way partakes of the intelligible and is most incomprehensible

This third factor which Timaeus sometimes calls matter as well as receptacle he also sometimes calls space When matter and space are identified with each other under the conception of a receptacle for the forms they have the characteristics of being absolutely

formless and imperceptible to the senses Nor are they as are the forms genuinely intelligible to reason 'The third nature which is space and is eternal Timaeus says admits not of destruction and provides a home for all created things and is apprehended without the help of sense by a kind of spurious reason and is hardly real which we beholding as in a dream say of all existence that it must of necessity be in some place and occupy a space but that which is neither in heaven nor on earth has no existence

The precise meaning of this conception of space is difficult to determine Does it for example find an echo in Plotinus statement that space is a container a container of body it is the home of such things as consist of isolated parts ? But he also says that space in a strict sense is unembodied and is not itself body and that body is not a void but rather that the void must be that in which body is placed seeming thereby to imply that space is essentially the void The statement in the *Timaeus* that there can be no such thing as a vacuum may apply only to the filled space of the created heaven and earth May it not also be said that space is a void when it is identified with the formless matter of the receptacle prior to creation?

This raises further questions Is the receptacle space or matter? And is the conception of space in the *Timaeus* rightly interpreted by Aquinas in commenting on Augustine s reading of the earth was void and empty in Genesis 1 2? Augustine holds that by the word earth in this passage *formless matter is to be understood* Because of its formlessness Aquinas writes the earth is said to be *void and empty* or *invisible and shapeless* and he adds that is why Plato says matter is place

HOWEVER THESE QUESTIONS are answered one thing seems to be clear Space functioning as receptacle can be identified only with matter devoid of form not with the matter of three dimensional bodies The relation of space to matter seems to be differently conceived by Descartes Space is for him not an antecedent principle involved in the original production of sensible things but rather—as the extension of bodies—it is inseparable in existence from them It is a property which signifies the essence of material substances as thinking signifies the essence of mind or soul By extension Descartes writes we understand whatever has length breadth and depth not inquiring whether it be a real body or merely space Nevertheless he goes on to say that by extension we do not here mean anything distinct and separate from the extended object itself

Descartes considers the significance of three statements *extension occupies place body possesses extension* and *extension is not body* The first statement he thinks means no more than *that which is extended occupies place* The second statement seems to imply that the meaning of *extension* is not identical with that of *body* yet Descartes insists we do not construct two distinct ideas in our imagination one of body the other of extension but merely a single image of extended body and from the point of the view of the thing it is exactly as if I had said *body is extended* or better *the extended is extended* Finally in the statement that *extension is not body* the word extension according to Descartes expresses a purely abstract conception—nothing which in itself has any sensible reality So far as its existence is concerned the thing conceived as extension cannot be separated from body Those who think otherwise Descartes asserts are involved in the contradiction of saying that *the same thing is at the same time body and not body*

The point is summarized in his *Principles of Philosophy* by the statement that the nature of matter or of body in its universal aspect does *not consist in being hard or heavy or colored* but solely in the fact that it is a substance extended in length breadth and depth But it may be asked are the dimensions of a body the same as space? Descartes replies that the same extension which constitutes the nature of a body constitutes the nature of space not only that which is full of body but also of that which is called a vacuum

If there were a vacuum or empty space extension might be separated from body This Descartes flatly denies As regards a vacuum in the philosophic sense of th wo d e a space in which there is no sub tanc it is ev d nt that such cannot xist becau e the xten sion of p o nternal pla is not d fferent from that of body And even when we take

this word vacuum in its ordinary sense Descartes goes on we do not mean a place or space in which there is absolutely nothing but only a place in which there are none of those things which we expected to find there

These points made in the *Principles* confirm the identification of three-dimensional space or extension with body which appears in the *Rules* They seem to be further confirmed in the *Discourse* by the reference to a continuous body or a space indefinitely extended in length height or depth which is the object of the geometricians. Descartes does not however neglect the distinction between space as the extension of body and place as the position one body occupies in relation to another According to common usage he says the word place signifies that in virtue of which a body is said to be here or there He objects to those who like Aristotle mean by place the surrounding surface of a body Local motion or change of place is not he argues a change in the body s surrounding surface but a change in its relative position

It is place rather than space which Aristotle seeks to define and place in the sense of the circumference of a body rather than its position in space He rejects the notion that place is the extension of a magnitude for that would he thinks identify it with matter Place belongs to body not as matter or a property of matter but as its boundary It is Aristotle writes the innermost motionless boundary a kind of surface and as it were a vessel *i e* a container of the thing This boundary is itself made at the surface of a body by a surrounding body or bodies. If a body has another body outside it and containing it Aristotle writes it is in place and if not not

The consequences of this conception of place are first a denial of space in the sense of void or empty place since place is always coincident with the thing contained or bounded second a denial of any infinite place since that would presuppose an actually infinite body—to Aristotle an impossibility and third the conclusion that the whole universe itself does not have a place for outside the outermost heaven which bounds the world there can be no containing body by which the universe is bounded

Aristotle explains that by heaven he means the extreme circumference of the whole—a whole composed of all natural perceptible body The two words which Einstein uses when he discusses the possibility of a finite and yet unbounded universe seem to apply to Aristotle s conception of the world—finite in body or matter yet unbounded *i e* without anything outside itself to determine or define its boundary

Aristotle s view of the world seems to be directly opposed to that of the ancient atomists. For them the whole of matter is discontinuous, existing in indivisible units or atoms each of which is a plenum—that is, a unit of matter absolutely continuous without void in it—but between which there is void or empty space For Aristotle the material world as a whole is a plenum *i e* continuous body without void Hence if by space is meant not place but void—a bodyless interval between or within bodies—there is no space Aristotle considers the arguments of Democritus that without void local motion would be impossible but he thinks there is no necessity for there being a void if there is movement

Following Democritus Lucretius gives another reason for positing void or empty space As the indivisibility of the simple bodies or atoms consists in their absolute solidity—their lack of void—so the divisibility of composite bodies derives from their being constituted by both atoms and void Wherever space lies empty which we call the void Lucretius writes body is not there moreover wherever body has its station there is by no means empty void Therefore the first bodies are solid and free from void If there were nothing which was empty and void the whole would be solid unless there were bodies determined to fill all the places that they held the whole universe would be but empty void space

For Aristotle in contrast the divisibility of matter seems to depend upon its being continuous On his view the composite body constituted by atoms separated from one another by void is not divisible but is already actually divided whereas the very thing which Lucretius regards as indivisible because it is continuous—the voidless atom—is for Aristotle divisible To call an atom divisible is of course,

to deny that it is atomic or in the language of Lucretius an uncuttable bit of solid single ness

Thus diametrically opposite theories of space and place seem to be connected with opposite theories of matter or body Space as the empty interval or void *between* solid bodies goes along with atomism whereas place as the boundary of the containing body at which it is in contact with the contained body goes along with the theory of the world as a material plenum

The atomic theory and the plenum theory are opposed in one other fundamental respect concerning space According to Aristotle the impossibility of an actually infinite body makes the largest place finite According to Lucretius the infinite number of atoms requires an infinite space Asking whether the void that we have discovered or room or space is altogether bounded or spreads out limitless and immeasur ably deep Lucretius answers that the whole universe is bounded in no direction His argu ment seems to be like Aristotle s for an un bounded universe Since there can be nothing outside the whole sum he writes it lacks therefore bound or limit But where Aristotle s meaning seems to be that the universe has no place since all places are inside it Lucretius appears to mean that empty space extends in finitely in all directions

MODERN ATOMISTS like Newton and Locke hold a theory of space which accords with the view of matter existing in d scontinuous units separated by intervals of emptiness Newton s d stinction for example between absolute and relative space acknowledges a space that is rela tive to bodies but also affirms an absolutely independent space which has being in separa tion from matter or bodies Absolute space in its own nature without relation to anything external he writes remains always similar and immovable Relative space is some movable dimension or measure of the absolute spaces which our senses determine by its position to bod es and which is commonly taken for im movable space As for place n d stin tion from space Newton holds that it is a part of space which a body t kes up and is accord ng to the space eith r absolute or relative In oppos ng Aristotle s v ew he adds that place is not the situation nor the external surface of the body For the places of equal solids are al ways equal but their surfaces by reason of their dissimilar figures are often unequal

Locke also distinguishes between space and place the one consisting in the relation of dis tance between any two bodies or points the other in the relation of distance betwixt any thing and any two or more points which are considered as keeping the same distance one with another and so considered as at rest With this conception of place he holds in ap parent agreement with Aristotle that we can have no idea of the place of the universe though we can of all the parts of it Yet he goes on to say that what lies beyond the universe is one uniform space or expansion wherein the mind finds no variety or marks

This seems to indicate that Locke s idea of space like that of Lucretius conceives an in finite void Those who a sert the impossibility of space existing without matter must he writes make body infinite Furthermore those who dispute for or against a vacuum do thereby confess that they have distinct ideas of vacuum and plenum *i e* that they have an idea of extension void of solidity though they deny its existence or else they dispute about nothing at all For they who so much alter the significa tion of words as to call extension body and consequently make the whole essence of body to be nothing but pure extension must talk absurdly whenever they speak of va uum, since it is impossible for extension to be without ex tension for vacuum whether we affirm or deny it signifies space without body whose very existence no one can deny to be possible who will not make matter infin te and take from God a power to annihilate any particle of it

Precisely because he thinks no one can affirm an infinite body and because he conceives space to be a void distinct from bod es Locke finds it n cessary to affirm the infinity of space I would ask he says whether if God placed a man at the extremity of corporeal beings he could not stretch h s hand beyond his body If he could then he would put his arm where there was before sp ce without body Furthermore if t be imposs ble fo any particle of matter to move but nto empty space th same possi bility of a body s moving into a vo d space be-

yond the utmost bounds of body as well as into a void space interspersed amongst bodies will always remain clear and evident So that wherever the mind places itself by any thought either amongst or remote from all bodies it can in this uniform idea of space no where find any bounds any end and so must necessarily conclude it to be actually infinite

It may seem paradoxical that pure space—space existing without matter—is denied by one who also denies the existence of matter When I speak of pure or empty space Berkeley writes it is not to be supposed that the word space stands for an idea distinct from or conceivable without body or motion What is meant he suggests is merely that the resistance one body gives to another in motion is absent when space is relatively empty But this is always relative In proportion as the resistance is lesser or greater Berkeley says the space is more or less *pure* There would be absolutely pure space only if all bodies other than his own were annihilated If that too were annihilated Berkeley concludes then there could be no motion and consequently no Space

All these contradictions concerning space enter into Kant s statement of the first cosmological antinomy in which the thesis that the world is limited with regard to space and the antithesis that the world is infinite in space seem to be equally susceptible to proof—and so to disproof! Both alternatives violate our empirical concepts

If space is *infinite* and unlimited Kant writes it is *too large* for every possible empirical concept If it is *finite* and limited you have a perfect right to ask what determines that limit Empty space is not an independent correlate of things and cannot be a final condition still less an empirical condition forming part of possible experience—for how can there be experience of what is absolutely void? But in order to produce an absolute totality in an empirical synthesis it is always requisite that the unconditioned should be an empirical concept Thus it follows that a *limited world* would be *too small* for your concept

Space itself however is for Kant not an empirical concept which has been derived from external experience Rather it is a necessary representation *a priori* forming the very foundation of all external intuitions and as Kant explains in his *Prolegomena* it establishes geometry as an *a priori* science Space is nothing but the form of all phenomena of the external senses it is the subjective condition of our sensibility without which no external intuition is possible for us Nothing which is seen in space is a thing by itself nor is space a form of things supposed to belong to them by themselves The external objects which we perceive in space are nothing but representations of our senses the form of which is space

So far as the experience of space is concerned, William James seems to take an opposite view Time and space relations he says are impressed from without and *stamp copies of themselves within* To the Kantian theory that space is a *quality produced* out of the inward resources of the mind to envelope sensations which as given originally are not spatial James replies that he can find no introspective experience of mentally producing or creating space

He proposes two other alternatives either (1) there is no spatial *quality* of sensation at all and space is a mere symbol of succession or ( ) there is an *extensive quality given immediately* in certain particular sensations The second seems to James best suited to explain the development of our perceptions of space and he does not think it inconsistent with the *a priori* or non empirical character of geometry whose necessary truths refer to ideal objects, not to experienced things in physical space

The chapter on Mathematics considers the relation of the postulates of diverse geometries to the diversity of Euclidean and non Euclidean spaces such as that of the flat plane the surface of a sphere and the surface of a pseudo sphere Just as different parallel postulates select different spaces for geometrical construction so a postulate like Euclid s concerning the equality of all right angles seems to assume a uniformity of space which permits geometrical figures to be transposed without alteration. If translation through space warped or magnified forms James remarks then the relations of equality etc. would always have to be expressed with a position-qualification added.

Confronted with a variety of purely mathematical spaces the physicist is concerned with the problem of which geometry is as Einstein says in correspondence with a real object or true of the real world According to the general theory of relativity the geometrical properties of space are not independent Ein stein writes but are determined by matter It follows that our assumptions about the dis tribution of matter determine the character of the world s space

On the assumption of a world not inhabited by matter everywhere in whose infinite space the avera^e density of matter would necessa rily be *nil* Einstein says we can imagine a quasi Euclidean universe analogous to a sur face which is irregularly curved in its individual parts but which nowhere departs appreciably from a plane something like the rippled sur face of a lake But if the average density of matter differs from zero however small may be that difference then the universe can not be quasi Euclidean It would be spherical (or elliptical) if the matter were uniformly dis tributed but since in reality the detailed dis tribution of matter is not uniform Einstein concludes that the real universe will deviate in individual parts from the spherical *i e* the universe will be quasi spherical But it will be necessarily finite

The nature of the actual space of the universe thus seems to be related to the issue whether physical as opposed to mathematical space is a void or filled with matter Defining a vacuum as a space empty of all bodies known to the senses Pascal insists that there is as much difference between nothingness and space as there is between empty space and a mater al body so that empty space occup es the mean between matter and nothingness Tor ricelli s experiments seem to him complete proof against the disciples of Aristotle for they upset the belief that nature abhors a vacuum

Gilbert s observations on magnetic influ ences Newton s observat ons on the transmis sion of light and heat as well as gravitat onal pull and Faraday s on electrical phenomena all seem to adm t the possib lity of action at a dis tance or through a vacuum But the question remains whether the so called physical vacuum is an absolute void or merely empty of all bodies known to the senses

Is not the heat of the warm room conveyed through the *vacuum* Newton asks by the vibrations of a much subtiler medium than air which after the air was drawn out remained in the *vacuum*? And is not this medium the same with that medium by which light is refracted and reflected and by whose vibrations light communicates heat to bodies? And is not this medium exceedingly more rare and subtile than the air and exceedingly more elastic and active? And does it not readily pervade all bodies? And is it not (by its elastic force) ex panded through all the heavens?

Huygens also refers to an ethereal matter as the medium for the propagation of light One will see he writes that it is not the same that serves for the propagation of sound It is not the same air but another kind of matter in which light spreads since if the air is removed from the vessel the light does not cease to traverse it as before But this ethereal medi um without which bodies would act at a dis tance upon one another—gravitationally mag netically electrically—through an absolute vo d seems to have contrary properties It is not only subtiler than air but as Ne vton suggests it may be denser than quick-s lver or gold since planets and comets and all gross bod es perform their motions more freely and w th less resistance in this aethereal medium than in any fluid which fills all space adequately without leaving any pores And in still another place he asks What is there in places almost empty of matter and whence is it that the Sun and Planets gravitate towards one another without dense matter between them?

Whatever may be thou_ht of the ether as a physical hypothesis the problem still remains whether action can take place at a distance through a void or must employ what Faraday calls *physical* lines of force through filled space Faraday thinks the evidences support the latter alternative for both electricity and magnetism He quotes a letter from Ne vton to Bentley to show that Newton was an unhes tating believer in physical l nes of gravitating fo ce

In th tlett posthumously d scovered New ton says That g av ty should be innate in

herent and essential to matter so that one body may act upon another at a distance through a *vacuum* without the mediation of anything else by and through which their action and force may be conveyed from one to another is to me so great an absurdity that I believe no man who has in philosophical matters a competent faculty of thinking can ever fall into it

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the vol me and page numbe s of the passa_ges referred to For example n 4 HO IER *Il ad* BK I [265 283] 12d the number 4 is the numbe of the volume in the set the number 12d indicates that the passage is in section d of page 12

PAGE SECTIONS When the text is printed in one c lumn the lett rs a and b refer to the upper and lower halves of the page For example in 53 JAMES *Psychol gy* 116a 119b the passa e begins in the upp half of page 116 nd ends in the lo er half of page 119 When the text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand side of the p ge the l tters c and d to the upper and lower halves of the r ght hand side of the page For example in 7 PLATO *Sympos um* 163b 164c the passage begins in the lower half of the left hand sid of page 163 and ends in the upper half of the right hand side of page 164

AUTHOR S D VISIONS One or more of the main divisions of a work (such as PART BK, CH SEC) are sometimes included in the reference l ne numbers in brackets a e given in certain ca es *e g Il d* BK II [265–283] 12d

BI LE REF RENC S Th *references are to book chapter a d erse* When the K g James a d Dou y versions differ in title of books o in the number ng of ch pters verses the King James vers on is cited first and the Douay ind cated by a (*D*) follows *e g* OLD TESTA MENT *Nehemiah* 7 45—(*D*) *II E dras* 7 46

SYMBOLS The abbreviat on esp calls the read r s attention to one or more especi lly relev nt part of a whol reference passim signifies th t the topic is d cuss d int rmittently rather tha i cont uously in th work or passage cited

Chapter 90 STATE

INTRODUCTION

IS man gregarious in the same sense as other animals are? Is he unlike other social animals the only political animal? Does man pattern the state after his own nature or does he in imitation of the angels try to live up to a city in the skies —a model of rationality or a utopian illusion? According to the way such questions are answered different theories of the state develop in the tradition of western thought

But it is not only the view man takes of his social nature which affects his view of society or the state His conception of the state is also colored by his understanding of man s place in nature and by his understanding of man s relation to God On one view the state is ordered to the service of man on another man is thought to be a creature of the state and the state is made God on still another man—like Antigone in Sophocles play—seems to be torn between serving the state and serving God

If man admits anything to be his superior he acknowledges his inferiority only to God or to the state That the idea of God and the idea of the state compete for maximum attention in the tradition of western thought is a significant and readily intelligible fact That the word sovereign which connotes *absolute supremacy* has both political and religious significance throws further light on this rivalry It immediately suggests all the issues of church and state of the spiritual and the temporal power of the city of God and the city of man

Even without the aura of divinity the state in the conception of many writers assumes by comparison with the individual man the proportions of the greatest living thing on earth For Plato it is the counterpart of the human soul many times magnified For Aristotle it is like an organic whole to which the individual belongs just as his own arm or leg belongs to him as an organic part For Hobbes it is the body politic—that Leviathan which dwarfs its members For Rousseau it is the corporate person having a general will more perfect than the individual will—infallible or almost infallible When to these images of the state is added the highest transfiguration—that by which the state becomes according to Hegel the image of God on earth or the embodiment of Absolute Spirit—the greatness of the state cannot be magnified further

THE PASSAGES IN WHICH these conceptions first appear are among the most famous in the literature of the theory of the state In the *Republic* Socrates proposes that we inquire into the nature of justice and injustice first as they appear in the State and secondly in the individual proceeding from the greater to the lesser and comparing them After the structure of the state has been examined in terms of its constituent classes and their functions or relations to one another Socrates returns to the individual We may assume he says that he has the same three principles in his own soul which are found in the state and in an other place he adds that there appear to be as many forms of the soul as there are distinct forms of the State

Whereas Plato analogizes the social classes in the state with the parts of the soul Aristotle compares the state in relation to the individual with the body in relation to its members The state is by nature clearly prior to the family and to the individual Aristotle writes since the whole is of necessity prior to the part for example if the whole body be destroyed there will be no foot or hand except in an equivocal sense The proof that the state is a creation of nature and prior to the individual is that the individual when isolated is not self-sufficing

and therefore he is like a part in relation to the whole

The analogical conception of the state takes a different turn with Hobbes The state is a work of art not a creation of nature Nature (the Art whereby God hath made and governs the world) says Hobbes is by the Art of man as in many other things so in this also imitated that it can make an Artificial Animal The machines men make— engines that move them selves by springs and wheels as doth a watch — seem to Hobbes to have an artificial life But Art goes yet further imitating that Rational and most excellent work of Nature Man For by Art is created that great Leviathan called a Commonwealth or State (in Latin *Civitas*) which is but an Artificial Man though of greater stature and strength than the Natural for whose protection and defense it was in tended and in which the Sovereignty is an Artificial Soul as giving life and motion to the whole body

Hobbes also speaks of the multitude being united in one Person as the generation of that great Leviathan or rather (to speak more reverently) of that Mortal God to which we owe under the Immortal God our peace and defence It is both divine and human for that which is compounded of the powers of most men united by consent in one person natural or civil is according to Hobbes the greatest of human powers

Rousseau has a number of different names for the moral and collective body formed by the association of individuals This public per son he says formerly took the name *city* and now takes that of *Republic* or *body politic* it is called by its members *State* when passive *Sovere gn* when active and *Power* when com pared with others like itself But Rousseau s primary emphasis *seems to be upon the per* sonality of the State it is a corporate person with moral qualities and intellectual faculties He refers repeatedly to the State as a *persona ficta* and as a moral person whose life is in the union of its members

Many of these comparisons or analogie recur in Hegel s theory of the state But for Hegel they are no longer metaphors they are the elements of a literal definition The state is an organism says Hegel It is th organic whole no part of which can have a separate life As occurs with life in the physical organism he writes life is present in every cell and separated from that life every cell dies This is the same as the ideality of every single class power and Corporation as soon as they have the impulse to subsist and be independent It is with them as with the belly in the organism It too asserts its independence but at the same time its independence is set aside and it is sac rificed and absorbed into the whole

But the state is not merely a living organism To the mature state says Hegel thought and consciousness essentially belong As high as mind stands above nature so high does the state stand above physical life Man must there fore venerate the state as the divine on earth and observe that if it is difficult to comprehend nature it is infinitely harder to understand the state In saying this Hegel seems to go beyond analogy to the assertion of a definition The march of God in the world that is what the state is he declares The basis of the state is the power of the reason actualizing itself as will In considering the Idea of the state we must not have our eyes on particular states or on particular institutions Instead we must con s der the Idea this actual God by itself

To those who object that the state is finite Hegel replies that to hold that mind on earth *i e* the state is only a finite mind is a one-sided view since there is nothing irrational about actuality Of course a bad state is world ly and finite and nothing else But the rational state is inherently infinite As simply stated by Hegel in the Introduction to his *Philosophy of History* the State is the D vine idea as it exists on Earth

THE DIVERSE CONCEPTIONS of the state raise *major issues in political theory concern ng the* origin of the state and the end it serves in both of which is involved the problem of the individual s relation to the state That problem is touched on in the chapter on CITIZEN and wherever the problem of the common good or the general welfare is discussed Here the ques tion whether the state is made for man or man for the state whether the state subor dinates the ind v dual in every phase of hi life or only in those matters wh

takes precedence over private interests serves critically to test the practical significance of different theories of the state Here also questions concerning the relation of the family to the state—discussed from the point of view of the domestic community in the chapter on FAMILY—throw light on the nature and origin of the political community

The word community and its synonym society seem to be more inclusive in meaning than state The family and the state are both communities—associations of individuals for a common purpose and sharing in a common life The word state is customarily used only for the developed political society—whether a city-state a feudal state or a nation state the word society usually covers the tribal community the village or any community which is politically primitive and has some of the characteristics of a large family In addition there are within the state at least in its modern formation many organized groups which deserve the name society —economic corporations and other associations religious educational professional recreational and more comprehensive than any particular political community are the cities of God and man which in Augustine s conception of them are not to be identified with either the Church or the State

With the rise of the science of sociology in our time the idea of society has come to be regarded as more general than that of state But in the tradition of the great books particularly those of political theory the state seems to be considered the epitome of human society All other forms of association are for the most part discussed only in their relation to the state either as the antecedents from which the state develops or as the subord nate organizations which it includes or sometimes as in the case of the church a distinct but coordinate community

The nature of society in general and the problem of different types of social organization and development are not treated in the great books except in their bearing on the family the church or the state—the three communities which seem to be taken as representative or basic Hence there is no chapter on society or community as such What for modern sociology is a unified subject matter here divides into a number of related yet distinct ideas—the domestic community being treated in the chapter on FAMILY the religious community in the chapter on RELIGION the various forms of economic organization in the chapters on LABOR and WEALTH In this chapter therefore we shall confine our attention to the specifically political community both in itself and in relation to these other communities or social groups.

CONCEIVED IN POLITICAL terms the problems of the state would seem to be inseparable from the problems of government Yet the ideas of state and government may be separated to the extent that one signifies the political community as a whole and the other the organization of its members according to relationships of ruler and ruled Furthermore the state may in one sense remain the same while in another it changes with changes in its form of government

Some writers like Aristotle and Hegel tend to identify state and government Aristotle for example says that the sameness of the state consists chiefly in the sameness of its constitution Others like Locke and Rousseau seem to regard government as part of the state the chief institution of a civil society or political community but definitely a means for securing the ends for which the state is formed For Locke government is primarily the legislative power for Rousseau it is the supreme administration th legitimate exercise of the executive power but for both it is a representative body—an organ of the whole body politic

Insofar as the great political theorists distinguish problems of the external relation of states with one another from those which concern the internal organization of the state *and the relation of the state to its own members* they also tend to distinguish state from government Hegel s distinction between external and internal sovereignty for example conceives the whole community as a sovereign state in relation to other communities and the state as a sovereign government in relation to its own members

Such questions of sovereignty or more generally of the relation of states to one anoth r belong to this chapter as well as to the chapter

on WAR AND PEACE but the theory of government is for the most part treated elsewhere—in the chapters on GOVERNMENT and CONSTITUTION and in all the chapters dealing with the special forms of government Still other problems of government which have a bearing on the nature of the state its powers and its limits are dealt with in the chapters on JUSTICE and LAW

THAT IT IS SOMEHOW natural for men to associate politically is generally affirmed even by those who also think the state is artificial or conventional No one takes either of the possible extreme positions that the state as a purely voluntary association is without any basis at all in man s nature and needs or that the state like the bee hive and the ant mound is purely a production of instinct

Saying that man is by nature a political animal Aristotle goes on to remark that man is more of a political animal than bees or other gregarious animals But the difference Aristotle points out between man and other social animals may make man the *only* political animal It consists in the fact that man being the only animal endo ved with the gift of speech can communicate with his fellows concerning the exped ent and inexpedient and therefore likewise the just and the unjust What characterizes human associations according to Aristotle is that they are built upon a shared sense of the expedient and the just Justice he writes is the bond of men in states

Hobbes also distinguishes between human and animal societies but seems to interpret the distinction differently Bees and ants live sociably one with another he says and yet have no other direction than their particular judgments and appetites nor speech whereby one of them can signify to another what he thinks expedient for the common benefit Inquiring why mankind cannot do the same —that is live sociably without government and law—Hobbes offers a number of explanations of which the last is that the agreement of these creatures is natural that of men is by covenant only wh ch is artificial and therefore it is no wonder if there be somewhat else required (besides covenant) to make their agreement constant and la ting wh ch is common power to keep them in awe and to direct their actions to the common benefit

But though Hobbes calls the state artificial because he holds it to be the product of a contract he does not deny the natural necessity which drives men to the creation of a commonwealth Man quits the state of nature which is a war of every man against every man to achieve self preservation or at least to enjoy the security of civil peace and the freedom from fear of violence

As natural as it may be for men to be in that condition which is called war when they live without a common power to keep them all in awe it is equally natural according to Hobbes for men to seek peace The passions that incline men to peace are fear of death desire of such things as are necessary to commodious living and a hope by their industry to obtain them And reason suggesteth convenient articles of peace upon which men may be drawn to agreement The commonwealth is therefore natural to the extent that man s needs and passions require it and man s reason recognizes certain natural laws for constructing it

The state is naturally necessary not as the effect of instinctive determinations but as the rationally determined means to an end If the end the state serves were not naturally sought or if there were any other means which reason could devise for accomplishing that end the state would be purely conventional—and dispensable The final cause end or design of men in the introduction of that restraint upon themselves (in which we see them live in commonwealths) is according to Hobbes the sight of their own preservation and of a more contented life thereby

In this ma n particular Ar stotle s account of the origin of the state seems to be the same. Though he does not attribute its formation to a contract and does not make fear the predominant motive he does regard the state as natural *only because* of its ind spensabil ty as a means for achieving the ends men naturally seek. The family is natural Ar stotle suggests because it is necessary for the perpetuation of the race and for the supply of men ev ryday wants When men aim at something more than the supply of d ily n eds the first society

to be formed is the village —normally an association of families And when several villages are united in a single complete community large enough to be nearly or quite self sufficing the state comes into existence originating in the bare needs of life and continuing in existence for the sake of a good life Therefore if the earlier forms of society are natural so is the state

The implication seems to be that if men were not naturally impelled to seek a better life than the family or the tribal community can provide —in other words if the family or village satisfied all of man s natural needs for ociety—the larger community the state would be neither natural nor necessary That man is by nature a political animal does not therefore mean that men have always and everywhere lived in states

Aristotle refers to the man who lives apart from society describing the natural outcast— the tribeless lawless heartless one whom Homer denounces —as a lover of war He conceives the state as coming into being subsequent to more primitive forms of social life each type of community being successively established with a view to some good for mankind always act in order to obtain that which they think good Since he thinks that the state aims at good in a greater degree than any other and at the highest good he praises the man who first founded the state as the greatest of benefactors

For Aristotle then there seems to be no inconsistency in saying that the state is as natural as the family and also that it is the result of a convention *i e* a voluntary association of men Nor does there seem to be any inconsistency between Hobbes view that the state is produced by a covenant of every man with every man and his understanding of the naturalness of the state in terms of the impulses which lead men to enter into this contract The same double note appears in the account of the state s origin which Locke Rousseau and Kant give The issue raised by the contract theory thus seems to turn on the interpretation of the original convention—whether or not it has legal s gnificance and what obl gat ons or limitations it imposes

Where Hobbes for example interprets the contract as creating along with the common wealth a sovereign person having absolute power Locke seems to make majority rule the legal consequence of the original compact God designed man for a sociable creature according to Locke with an inclination and under a necessity to have fellowship with those of his own kind Yet even what he calls the first society between man and wife Locke says, is made by a voluntary compact It makes no difference to Locke s theory whether political societies develop by expansion from the family (which he takes to be the normal course of events) or result from a voluntary association of independent men

In either case political as distinguished from domestic society does not begin until every man by consenting with others to make one body politic under one government puts himself under an obligation to every one of that society to submit to the determination of the majority This is done by barely agreein to unite into one political society which is all the compact that is or needs be between the individuals that enter into or make up a commonwealth And thus that which begins and actually constitutes any political society is nothing but the consent of any number of free men capable of a majority to unite and incorporate into such a society

If it is that and that only which did or could give beginning to any lawful government in the world it seems to be equally evident to Locke that absolute monarchy which by some men is counted the only government in the world is indeed inconsistent with civil society and so can be no form of civil government at all

Though Rousseau says that the most ancient of all societies the family is the only one that is natural he qualifies this by adding that it remains natural only so long as the children need the family for their preservation If the members of the family remain united thereafter they continue so no longer naturally but voluntarily and the family itself is then maintained only by convention By the same criterion civil society would seem to be natural at least on Rousseau s own supposition that the obstacles in the way of their preservation in the state of nature are greater than the power of isolated individuals or families to maintain

themselves, and so the human race would perish unless it changed its manner of existence

Rousseau furthermore explicitly denies that the transition from a state of nature to a state of civil society can be treated as an historical fact It is an hypothesis calculated to explain the nature of things [rather] than to ascertain their actual origin The social contract which Rousseau sometimes calls the first conven tion is, therefore the legal not the historical origin of the state As he formulates the com pact each of us puts his person and all his power in common under the supreme direction of the general will and in our corporate capac ity we receive each member as an indivisible part of the whole

Though all the qualities of the general will may reside in the majority so that the general will can be discovered by a majority vote unanimity is required to create the sover eign body politic with the right as well as the power to compel whoever refuses to obey the general will Rousseau points out that the law of majority voting is it elf something estab lished by convention and presupposes unanim ity on one occasion at least To this extent Rousseau agrees with Locke about the juridical significance of the original convention or the universal consent which establishes a civil soci ety and just as Locke calls absolute monarchy inconsistent with the very nature of the state so Rousseau uses the words republic and body politic interchangeably To be legiti mate he writes the government must be not one with the sovereign but its minister

But Rousseau identifies government with the executive rather than primarily with the legis lative as Locke does He therefore denies that the original convention institutes government as well as the body politic itself— the Sover e gn having no force other than the l gislative po ver In consequence Rousseau and Locke differ somewhat in their discussion of the dis solution of government as distingu shed from the dissolution of society or the death of the body politic. Rousseau regards no la as irrev ocable not excluding the social compact it self for if all the citizens assembled of one ac cord to break the compact it is impo s ble to doubt that it would be very legitimately broken

According to Kant a state is the union of a number of men under juridical laws —the op posite of the state of nature in which there is no distributive justice It is incumbent on men says Kant to accept the principle that it is necessary to leave the state of nature in which every one follows his own inclinations and to form a union of all those who cannot avoid coming into reciprocal communication and thus subject themselves in common to the external restraint of public compulsory laws

Kant refers to this principle as the postu late of public right which obliges all men to enter into the relations of a civil state of soci ety The state thus seems to be both necessary and voluntary for though he says that the act by which a people is represented as consti tuting itself into a state is termed *the original contract* yet he also adds that this is properly only an outward mode of representing the idea by which the rightfulness of the process of or ganizing the constitution may be made con ceivable

AGAINST ALL THESE notions of the original con tract Hegel criticizing Kant s treatment of marriage under the concept of contract says that it is equally far from the truth to ground the nature of the state on the contractual rela tion whether the state is supposed to be a con tract of all with all or of all with the monarch and the government Contract according to Hegel belongs to the sphere of relationships concerning private property generally Hence the intrusion of this contractual relation into the relation between the individual and the state has been productive of the greatest confusion in both constitutional law and public life

A contract Hegel explains springs from a person s arbitrary will an origin which marriage too has in common with contract But the case is quite different with the state it does not lie with an individual s arbitrary will to separate himself from the state because we are already citizens of the state by birth The rational end of man is life in the state and if there is no state there reason at once demands that one be founded Permission to enter a state or leave it must be g ven by the state this then is not [illegible] an individual s ar

bitrary will and therefore the state does not rest on contract for contract presupposes arbitrariness It is false to maintain that the foundation of the state is something at the option of all its members It is nearer the truth to say that it is absolutely necessary for every individual to be a citizen

Hegel dismisses all questions concerning historical origins in general or particular as no concern of the Idea of the state In the Idea itself its antecedents are to be found The family and civil society are the earlier—logical —moments in the development of the Idea of the State Civil society Hegel writes is the [state of] difference which intervenes between the family and the state even if its formation follows later in time than that of the state The social contract theory applies only to what he calls civil society by which he means the modern conception of the state as a unity which is only a partnership Many modern constitutional lawyers Hegel goes on have been able to bring within their purview no theory of the state but this In civil society each member is his own end and except by contract with others he cannot attain the whole compass of his ends and therefore these others are means to the end of the particular members

In another place Hegel describes civil society as a system of complete interdependence for the attainment of selfish ends wherein the livelihood happiness and legal status of one man is interwoven with the livelihood happiness and rights of all In still another he observes that only when the state is confused with civil society only when its specific end is laid down as the security and protection of property and personal freedom does the interest of the individuals as such become the ultimate end of their association Whence it follows that membership in the state is something optional But the state s relation to the individual is quite different from this Since the state is mind objectified it is only as one of its members that the individual himself has objectivity genuine individuality and an ethical life

The unity of the state unlike that of civil society is according to Hegel an absolute unmoved end in itself in which freedom comes into its supreme right This final end has supreme right against the individual whose supreme duty is to be a member of the state

It does not seem to be an inevitable corollary of the social contract theory that the stat be conceived as serving the private interests of individuals The welfare of the state Kant declares is its own highest good It is not to be understood merely as the individual *well being* and *happiness* of the citizens of the state for—as Rousseau asserts—this end may perhaps be more agreeably and more desirably attained in the state of nature Kant and Locke both affirm a social contract but where Kant makes the safety of the republic itself the highest law (*salus reipublicae suprema lex*) Locke makes it the security of the people (*salus populi*)

The reason why men enter into society is the preservation of their property writes Locke The property of the individual is insecure in a state of nature to avoid this insecurity men unite into societies that they may have the united strength of the whole society to secure and defend their properties When Locke says that the chief end of civil society is the preservation of property he does not refer solely to economic goods but to all the goods to which he thinks man has a natural right— his life liberty and estate Men would not quit the state of nature he writes, were it not to preserve their lives liberties and fortunes and by stated rules of right and property to secure their peace and quiet

In the light of Locke s conception of property his position resembles Hobbes statement of the end which men seek in forming a commonwealth to live peaceably amongst themselves and be protected against other men and to get themselves out from that miserable condition of war in which life is solitary poor nasty brutish and short

It seems to be in a different sense of property that Rousseau holds that the foundation of the social compact is property and its first condition that everyone should be maintained in the peaceful possession of what belongs to him Restricting property to economic possessions Rousseau asks Are not all the advantages of society for the rich and powerful? Society he observes provides a powerful protection for the immense possessions of the rich

and hardly leaves the poor man in quiet possession of the cottage he builds with his own hands.

This and Adam Smith s statement that civil government so far as it is instituted for the security of property is in reality instituted for the defence of the rich against the poor or of those who have some property against those who have none at all seem to anticipate the Marxist view of the state as the bulwark of property rights and an instrument of class oppression If the protection of property and the maintenance of economic inequalities is the sole purpose of the state then the ultimate resolution of the class war in favor of a classless society will in the opinion of Marx and Engels be accompanied by what they call the withering away of the state —an atrophy from loss of function

But even in a classless society the state would not cease to function if its end were to secure not merely the individual s wealth but his whole well being Then however we must face another question—whether the happiness of the individual is the end of the state Plato for example seems to answer this question in opposite ways

In the *Protagoras* it is said that the desire for self preservation gathered men into cities This is part of the Promethean legend of the origin of civilization As told by Aeschylus—and in a similar account of early history by Lucretius—the story intimates that men contract to live together for protection against violence and to enjoy a better life—the fruits of civil society or civilization

But in the *Republic* Socrates says that in constructing the ideal state the aim is not the disproportionate happiness of any one class but the greatest happiness of the whole To the objection of Adeimantus that the citizens may be miserable in such a state, Socrates replies that we must consider whether we would look to their greatest happiness individually or whether this principle of happiness does not rather reside in the State as a whole Later Socrates reminds Glaucon who wonders whether the members of the guardian (or ruling) class will not be unhappy that we are fashioning the State with a view to the greatest happiness not of any particular class but of the whole

Aristotle criticizes Socrates for depriving even the guardians of happiness and for saying that the legislator ought to make the whole state happy In his own view the whole cannot be happy unless most or all or some of its parts enjoy happiness In this respect happiness is not like the even principle in numbers which may exist only in the whole but in neither of the parts When Aristotle asserts that the state exists for the sake of a good life he seems to have the happiness of individuals in mind for he excludes slaves and brute animals from membership in the state on the ground that they can have no share in happiness or in a life of free choice

But Aristotle also seems to give the state preeminence over the individual Even if the end is the same for a single man and for a state he writes that of the state seems at all events something greater and more complete whether to attain or to preserve. This does not seem to him inconsistent with thinking that that form of government is best in which every man whoever he is can act best and live happily

Nor is Hegel reluctant to embrace both horns of the dilemma Civil society rather than the state in its perfect realization seems to be devoted to the attainment of selfish ends such as individual happiness But Hegel also says it is perfectly true that the end of the state is the happiness of the citizens If all is not well with them if their subjective aims are not satisfied if they do not find that the state as such is the means to their satisfaction then the footing of the state is itself insecure

THE FOREGOING CONSIDERATIONS of the nature origin and end of political society enter into the various conceptions of the ideal state which appear in the tradition of western thought They also have a bearing on the division of social classes in the state on the duties of the statesman or prince, and the principles of statecraft—the art or science of the ruler Finally they have implications for the relation of states to one another and for the different historic formations of the state

All the modern writers who make some distinction between the state of nature and the state of civil society seem to agree that independent or sovereign states in their relation to

on another are in a state of nature Identifying the state of nature with the state of war Hobbes remarks that though there had never been any time wherein particular men were in a *condition* of war one against another yet in all times kings and persons of sovereign authority are in the state and posture of gladiators which is the posture of war

Similarly to the question Where are or ever were there any men in a state of nature? Locke replies all princes and rulers of independent governments all through the world are in a state of nature Because bodies politic remain in a state of nature among themselves they experience according to Rousseau all the inconveniences which had obliged individuals to forsake it With the same intent Montesquieu observes that princes who live not among themselves under civil law are not free they are governed by force they may continually force or be forced

In Kant s opinion states viewed as nations in their external relations to one another—like lawless savages—are naturally in a non juridical condition and he adds that this natural condition is a state of war Similarly Hegel writes that since the sovereignty of a state is the principle of its relations to others states are to that extent in a state of nature in relation to each other

On any of the theories concerning the origin of the state it may be asked why political society cannot be enlarged to include all mankind *If for example in Aristotle s view the state is* a union of villages as the village is a union of families why may not a further expansion of political society be brought about by a union of states?

The question is not simply one of geographical limits or extent of population The modern national state though normally larger than the ancient city-state remains an individual state and in the same external relationship to other states. Even the expansion of a city-state like Rome at the greatest extent of its imperial domain does not exemplify the principle of the world-state unless it is proposed that the political unification of mankind be brought about by conquest and maintained by despotism

Though Aristotle describes the state as formed by a combination of villages he does not propose a combination of states to form a larger community His reason may be that the essence of the state lies in its self sufficiency Consequently the best limit of the population of a state is the largest number which suffices for the purposes of life and can be taken in at a single view and the territory need be no larger than one which enables the population to be most entirely self sufficing

The moderns in contrast propose the expansion of the political community by the amalgamation of separate political units Montesquieu for example suggests that by entering into a confederate republic a number of small states can obtain the security which none of them has by itself If a republic be small he writes it is destroyed by a foreign force if it be large it is ruined by an internal imperfection A confederate republic he thinks has all the internal advantages of a republican together with the external force of a monarchical government This form of government Montesquieu continues is a convention by which several petty states agree to become members of a larger one which they intend to establish It is a kind of assemblage of societies that constitute a new one capable of increasing by means of further associations till they arrive at such a degree of power as to be able to provide for the security of the whole body

It is not security against external aggression, but internal peace which leads Rousseau to propose an association more extensive than anything Montesquieu seems *to have in mind*—a confederation of *all* the states of Europe But he does not see beyond Europe to all the states of the world He regards the great city of the *world as something less than a* political society with civil laws for he speaks of it as the body politic whose general will is always the law of nature

Nor are the American Federalists Hamilton Madison and Jay able at the end of the 18th century to envisage the unlimited extension of the principl of federal union They content themselves with arguing for the possibility of so extensive a union as the projected United States of America against those who quoted the observations of Montesquieu *on the* necessity of a contracted territory *for a* Republican Government

Before our own day Kant alone seems to contemplate the possibility of a world state *through federal union* The cosmopolitical ideal he says is a universal union of states analogous to that by which a nation becomes a state The postulate of reason which obliges men to quit the state of nature and form a civil union applies to states as well The natural state of nations as well as of individual men Kant writes is a state which it is a duty to pass out of in order to enter into a legal state But the ideal is impracticable in Kant s opinion—again because of the supposed limits of government with respect to extended territories and populations

With the too great extension of such a union of states over vast regions any government of it and consequently the protection of its individual members must at last become impossible Kant therefore proposes as an alternative a permanent congress of nations but one which being a voluntary combination of states would be dissolvable at any time — a mere league or confederacy and not such a federal union as is embodied in the United States of America founded upon a political constitution and therefore indissoluble

The further implications of Kant s proposal the alternative it replaces and Hegel s objections to either are discussed in the chapter on WAR AND PEACE Here it seems appropriate to conclude with that vision of the world state which appears early in the tradition of the great books It is conceived not as a world wide federal union but as a universal or unlimited community in which all men are citizens together even as they belong to one human brotherhood

If our intellectual part is common argues the philosophical Roman Emperor Marcus Aurelius the reason also in respect of which we are rational beings is common if this is so common also is the reason which commands us what to do and what not to do if this is so there is a common law also if this is so we are fellow citizens if this is so we are members of some political community if this is so the world is in a manner a state

Centuries later Dante in the first book of his *De Monarchia* recaptures this ancient vision of the world state Because a plurality of authorities is disorder authority must be single and therefore Dante argues world government is necessary for the well being of the world It must be conceived as governing mankind on the basis of what all have in common By that common law it leads all toward peace

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to For example in 4 HOMER *Iliad* BK II [265 283] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 12

PAGE SECTIONS When the text is printed in one column the letters a and b refer to the upper and lo ver halves of the page For example in 53 JAMES *Psy hology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119 When the text is printed in two columns the letters a and b refer to the upper and lo ver halves of the left hand s de of the page the letters c and d to the upper and lo er halves of the right hand side of the page For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lo ver half of the left hand s de of page 163 and ends in the upper half of the right hand s de of page 164

Chapter 91 TEMPERANCE

INTRODUCTION

MOST outstanding figures in history most heroes of legend or fiction are men of strong passions of ambition and of pride They are driven by desires which tend to be limitless Few exemplify moderation Few stop short of excess in anger or love or in their striving for power and pleasure They may curb their appetites in one direction only to indulge them without rein in another They do not follow in all things the counsels of temperance expressed by the ancient maxim Nothing overmuch

Achilles is not temperate in his wrath nor does Odysseus for all his craft and cunning exhibit self control when his vanity or curiosity is at stake The tragedies of Euripides more perhaps than those of Sophocles and Aeschylus embody the hubris or pride which is common to all tragic figures in some particular form of intemperance such as the boundless hate of Medea or the abstemiousness of Hippolytus One play especially *Bacchantes* takes intemperance for its central theme and sets the disciples of the dionysiac spirit in mortal conflict with the puritans and their prohibitions Comedy as well as tragedy flo s from intemperance as when we smile at the exaggerated sentimentality of the romantic lovers described by Cervantes and Fielding Chaucer and Shakespeare or find merr ment n the indulgences of Sir John Falstaff Pantagruel and Panurge or Tristram Shandy

The great books of history add their evidence They make fict on seem pale by comparison with the excesses of cruelty and sensuality which if they ere not presented as fact might be dismissed as unimaginable Page after page of Tacitus and Gibbon oft n describe in an unrelieved sequence human debauchery brutalities and re elnes ingeniou ly designed to reach some new e treme in order to procure through no elty sati faction for appetites already over indulged and weary of familiar pleasures

Nor is the historian s panorama of intemperance limited to the uncontrolled indulgences of the few—the oriental despots described by Herodotus or the Caesars and their retinues in the imperial court of Rome Armies in the field and the mob formations of civilian life are depicted in wanton and riotous behavior Whole peoples are described as being given to luxurious living or as wanting in standards of public decency The few exceptions in antiquity such as Spartan rigor or the chastity if not the sobriety of the primitive Germans only accentuate by contrast the immoderate tenor of life in most ancient societies

DARWIN SEEMS TO think that a much greater degree of self control characterizes modern life both public and private though his opinion on this score may give undue weight to the conventions so much insisted upon in England under Queen Victoria Temperance according to him is a virtue peculiar to civilized life The greatest intemperance he writes is no reproach with savages

Darwin places temperance along with prudence among the so called self regarding virtues which do not obviously though they may really affect the welfare of the tribe and which have never been esteemed by savages though now highly appreciated by civilized nations That Darwin has modern society in mind when he speaks of civilized nations may be inferred from his remarks about the sensuality of the Greeks and Romans This seems to be confirmed by his statement that the hatred of indecency which is so valuable an aid to chastity is a modern virtue appertaining exclusively to civilized life

What may be noted here and questioned—

in addition to the validity of Darwin s comparison of modern and ancient culture—is the tendency to identify temperance with chastity or at least with restraint if not abstinence in the sphere of the sexual impulses In our day the general notion of virtue is often restricted to the virtue of chastity as when we use the words virtuous woman to signify one who is chaste or woman of easy virtue to signify one who is not But spectacles of gluttony and drunkenness of avarice or greed are ever present to remind us that man can be intemperate in more ways than one Darwin s implication of progress from licentious to moderate living may have less justification when we consider all the forms which intemperance can take

Darwin furthermore seems to distinguish between courage and temperance in relation to the level or degree of civilization Unlike temperance courage he thinks is demanded by primitive as well as civilized life because it concerns the welfare of society as much as the well being of the individual Since no man can be useful or faithful to his tribe without courage this quality he says has universally been placed in the highest rank On the point of this comparison between the two virtues Freud appears to disagree Though he too considers temperance or self control largely in the sphere of the sexual instincts he seems to think that any form of organized social life whether regarded as primitive or civilized exacts certain restraints from the individual for the sake of the common good Temperance no less than courage serves the tribe or the state

Civilization has been built up Freud writes under the pressure of the struggle for existence by sacrifices in gratification of the primitive impulses and that is to a great extent for ever being re created as each individual successively joining the community repeats the sacrifice of his instinctive pleasures for the common good The sexual are amongst the most important of the instinctive forces thus utilized they are in this way sublimated that is to say their energy is turned aside from its sexual goal and diverted towards other ends no longer sexual and socially more valuable.

Society may depend on the temperance of its members without being able to exact temperance from them Writers like J S Mill for example question the right of society to enforce temperance upon its members by the enactment of sumptuary laws especially with regard to food and drink. The supposition seems to be that the intemperate man injures only himself—to do which is the prerogative of his personal liberty—whereas the unjust man injures others We shall return to the consideration of this issue later after we have examined the nature of temperance and its relation to other virtues such as justice courage and wisdom or prudence

IF THE POETS AND the historians describe the prevalence and the range of man s intemperance the moralists tend to be unanimous in recommending self control or moderation There is hardly any variety of moral theory—whether developed in terms of law and duty or in terms of happiness and virtue whether appealing to *a priori* principles or to criteria of utility empirically applied—which does not recommend the discipline of desire by reason and which does not condemn sensuality self indulgence unchecked appetites or passions run wild

The word temperance itself is not always used nor is the technical notion of virtue always implied by those who advocate what Milton calls the rule of not too much by temperance taught For some writers on the other hand temperance and virtue are almost identical They think the essence of temperance is moderation and the virtuous life is the reasonable one It is one in which reason moderates the passions and limits the pursuit of pleasure

For example Freud s theory of the reality principle seems to reflect traditional notions of temperance A person dominated by the pleasure principle is infantile in character The transition from the pleasure principle to the reality principle he points out is one of the most important advances in the development of the ego When the ego learns that it must inevitably go without immediate satisfaction postpone gratification learn to endure a degree of pain and altogether renounce certain sources of pleasure it becomes reasonable is no longer controlled by the pleasure-principle but follows the reality principle which seeks a delayed and diminished pleasure one which is assured by its realization of fact its relation to reality

So too Spinoza s doctrine that human bondage consists in being subject to the tyranny of the passions whereas human freedom stems from the rule of reason can be read as an apostrophe to temperance Descartes maxim to try always to conquer myself rather than fortune and to alter my desires rather than change the order of the world is still another expression of the insight that peace of mind comes from self control Though Kant does not think temperance deserves to be called good without qualification he does affirm that moderation in the affections and passions self control and calm deliberation are not only good in many respects but even seem to constitute part of the intrinsic worth of the person

It is Montaigne who magnifies temperance beyond virtue and makes it the measure of the sound pursuit of every sort of good even virtue itself Without temperance he writes in his essay Of Moderation we can corrupt things that in themselves are laudable and good we may grasp virtue so that it becomes vicious if we embrace it too stringently and with too violent a desire Montaigne opposes those who say there is never any excess in virtue On the contrary he thinks that a man may both be too much in love with virtue and be excessive in a just action I love temperate and moderate natures An immoderate zeal even to that which is good though it does not offend astonishes me and puts me to study what name to give it

As with virtue so with wisdom or philosophy He quotes Holy Writ to the effect that we should be soberly wise not try to be wiser than befits our natures We should not dive into philosophy beyond the limits of profit taken moderately it is pleasant and useful There is in short no pleasure so just and lawful where intemperance and excess are not to be condemned

Montaigne sees temperance as augmenting the pleasure of life rather than diminishing it He subscribes to Plato s statement in the *Laws* that the temperate life is in all things gentle having gentle pains and gentle pleasures whereas the intemperate life has violent pains and pleasures, and vehement and stinging desires and loves utterly insane and in the temperate life the pleasures exceed the pains but in the intemperate life the pains exceed the pleasures in greatness and number and frequency To overlook this Montaigne elsewhere suggests is to suppose that the regimen which stops the toper before he has drunk himself drunk the glutton before he has eaten to a surfeit and the lecher before he has got the pox, is an enemy to pleasure Yet in his love of temperate and moderate natures Montaigne repeatedly counsels us to avoid being overzealous even about temperance itself The maxim Nothing overmuch applies to virtue as well as to the pleasure-seeking that virtue tries to control

Considered in terms of Aristotle s theory that all the moral virtues consist in a mean between excess and defect Montaigne seems to be identifying moderation with the observance of the mean so that moderation becomes an aspect of every virtue including temperance itself as one virtue among others Thus the courageous man is one who fears neither too much nor too little but is moderate with respect to peril and pain. Accordingly a man cannot be too courageous, but only too fearless and so rash or foolhardy

But it may be supposed that if moderation enters into all the virtues such virtues as temperance and courage are not distinct Holding them to be distinct in regard to the objects with which they deal Aquinas admits that each of the major virtues can be taken to denote certain general conditions of virtue so that in a sense they overflow into one another He defines temperance as a disposition of the soul moderating any passions or acts so as to keep them within bounds and fortitude as a disposition whereby the soul is strengthened for that which is in accord with reason against any assaults of the passions or the toil involved in any work to be done So conceived Aquinas thinks it is possible to see how temperance and fortitude are in some sense one

The man who can curb his desires for the pleasures of touch is more able to check his daring in the face of danger and in this sense fortitude is said to be temperate The man who is able to stand firm against the dangers of death is more able to remain firm against the onslaught of pleasures and so temperance can be

said to be brave Thus temperance enters into other virtues insofar as it leads men to observe the mean in all things just as fortitude enters into temperance because it strengthens men against the enticements of pleasure as well as against the fear of pain

The general theory of virtue in terms of which the several virtues are distinguished and their connections traced is discussed in the chapter on VIRTUE AND VICE and the special virtues to which temperance is related are considered in the chapters on COURAGE JUSTICE and PRUDENCE. Here we must be concerned to observe how the general conception of virtue is exemplified in the definitions of temperance given by those who like Plato Aristotle and Aquinas consider it to be not the whole of virtue but one of the major virtues and distinct from the others

THOUGH PLATO AND Aristotle do not conceive virtue in the same way and though they diverge in analyzing particular virtues such as justice or wisdom and in describing how particular virtues are related to one another they nevertheless seem to concur on a number of points in their treatment of temperance

In the *Gorgias* Callicles asserts that only those who are unable to satisfy their desire for pleasures praise temperance and call intemperance base But he asks what could be more truly base or evil than temperance to a man who might freely be enjoying every good and has no one to stand in his way? And he concludes by saying that luxury and intemperance and license if they be provided with means are virtue and happiness

In reply Socrates tries to persuade Callicles that instead of the intemperate and insatiate life one should choose that which is orderly and sufficient and has a due provision for daily needs He compares the intemperate man to a vessel full of holes because it can never be satisfied By analogy with the sound and the leaky vessel Socrates describes the temperate man as able to satisfy his limited desires whereas the intemperate man of boundless desire can never pause in his search for pleasure If he pauses for a moment he is in an agony of pain Such are the respective lives he adds and now would you say that the life of the intemperate is happier than that of the temperate?

Callicles claims to be unconvinced but later Socrates gets him to admit that in all things—in a house or a ship in the body or the soul—order is good and disorder evil He then proceeds to point out that order is the principle of health in the body and of temperance in the soul It is in these terms that Socrates defines temperance in the *Republic* as the ordering or controlling of certain pleasures and desires In the human soul he explains there is a better and also a worse principle and when the better has the worse under control then a man is said to be master of himself

The words temperance and self mastery are almost interchangeable both signify the rule of the better part over the worse Just as the courageous man is one whose spirit retains in pleasure and in pain the commands of reason about what he ought or ought not to fear so the temperate man is one in whom the ruling principle of reason and the two subject ones of spirit and desire are equally agreed that reason ought to rule

In somewhat similar terms Aristotle defines temperance and courage by reference to pleasure and pain The man who abstains from bodily pleasures and delights in this very fact is temperate while the man who is annoyed at it is self indulgent and he who stands his ground against things that are terrible and delights in this or at least is not pained is brave while the man who is pained is a coward Like Plato Aristotle makes the rational principle the source of these virtues It is reason or more precisely one of reason s virtues prudence which determines the mean between excess and defect with regard to pleasure and pain or fear anger and the other passions

Like Freud Aristotle regards self indulgence as infantile or childish Children live at the beck and call of appetite and it is in them that the desire for what is pleasant is strongest When such desire is not regulated by reason it will go to great lengths for in an irrational being the desire for pleasure is insatiable even if it tries every source of gratification Where Freud speaks of the pleasure principle submitting to the reality principle Aristotle says as the child should live according to the direction of his tutor so the appetitive element

should live according to the rational principle The appetitive element in a temperate man should harmonize with the rational principle

According to Aristotle temperance is concerned not with all pleasures but with the kind of pleasures that other animals share in which therefore appear slavish and brutish these are touch and taste Self indulgence is a matter of reproach because it attaches to us not as men but as animals To delight in such things and to love them above all others is brutish

The endurance of pain which is central to the nature of courage enters into temperance incidentally The self indulgent man is pained more than he ought at not getting pleasant things whereas the temperate man is not pained at the absence of what is pleasant or at his abstinence from it But total abstinence is not temperance any more than over indulgence is The temperate man occupies a middle position between those who have an insatiable craving for pleasure and those who fall short with regard to pleasures and delight in them less than they should Such insensibility Aristotle declares is not human either

When reason curbs the desire for bodily pleasures it is not to lessen sensual pleasure in the opinion of Aquinas but to prevent the force of concupiscence from cleaving to it immoderately By *immoderately* he explains I mean going beyond the bounds of reason as a sober person does not take less pleasure in food eaten in moderation than the glutton but his concupiscence lingers less in such pleasures Though Aquinas agrees with Aristotle in defining temperance strictly as moderation with respect to the pleasures of taste and touch such as the pleasures of the table or of sex he associates with temperance those virtues which involve moderation with respect to other pleasures.

For example there is liberality with respect to money as an object of love or pleasure Neither the spendthrift nor the miser is temperate Friendliness or affability and gentleness represent temperance in the relation of a man to the pleasures of fellowship and the virtue which Aristotle calls *eutrapelia* is similarly classified by Aquinas as being a moderate indulgence in the pleasures of recreation of sport and games the opposites of which in excess and defect can be called buffoonery and boorishness Even the pleasures of learning can be pursued intemperately so that an undue craving for knowledge—beyond the proper limits and for the wrong reasons—is according to Aquinas the vice of curiosity

THE NOTIONS OF ABSTINENCE and continence seem to be closely related to the idea of temperance The words are often used interchangeably But as we have seen according to the theory of virtue as a mean between extremes of excess and defect temperance calls for a moderate indulgence in pleasures not abstinence from them entirely This raises the question whether the asceticism of the religious life violates the rule of reason by a kind of immoderate withdrawal from ordinary pleasures What to the psychoanalyst may look like pathological self denial or to the philosopher like a violation of nature takes in the eyes of the Christian theologian the form of heroic temperance a supernatural perfection of the virtue

When in the religious life a man does his utmost to strive onward to divine things, then according to Aquinas in those who are tending towards the divine similitude temperance is a *perfecting* virtue So far as nature allows it neglects the needs of the body In those who have already attained to the divine likeness the *perfect* virture of temperance is one which knows no earthly desires.

Since use of sexual union hinders the mind from giving itself wholly to the service of God and since the use of venery withdraws the mind from that perfect intentness on tending to God the perpetual continence of the celibate life as well as the voluntary poverty of the monastic life seem to Aquinas requisite for religious perfection

Augustine in his *Confessions* tells of the time when I thought I should be impossibly miserable if I had to forego the embraces of a woman and I did not think of Your mercy as a healing medicine for that weakness because I had never tried it I thought that continency was a matter of our own strength and I knew that I had not the strength for in my utter foolishness I did not know the word of Your Scripture that none can be continent unless you give it

Though he separated from his mistress in order to prepare for marriage he discovered that it was not really marriage that I wanted I was simply a slave to lust He recounts the struggles wh ch finally enabled him to turn in the other direction and to see the austere beauty of Continence serene and indeed joy ous and with her he adds I saw such hosts of young men and women gray widows and women grown old in virginity and in them all Continence herself not barren but the fruitful mother of children her joys by You Lord her Spouse

But there is another meaning of continence accord ng to which it is condemned by the philosopher who conceives temperance as a nat ural virtue The reason for Aristotle s con demnation of continence differs from the reason he gives for his disapproval of abstinence Abstinence—at least on the natural plane—is an im moderate denial of pleasure Continence is op posed to temperance because it merely repre sents reason s inhibition of the act prompted by a licentious desire for pleasure It is not an habitual moderation of desire itself Aristotle s emphasis on habit therefore leads him to insist upon the distinction between temperance and continence

We group together the incontinent and the self indulgent the continent and the temperate man Aristotle writes because they are con cerned somehow with the same pleasures and pain but though they are concerned with the same objects they are not similarly related to them The difference lies in the fact that a man acts continently in a particular situation when his reason is able to overcome an im moderate desire for pleasure and incontinently when the force of his desire brushes reason as de whereas a man not only acts temperately but is temperate in character when his desires are themselves habitually moderated to be in accord with reason

The temperate man therefore has no need for continence Nor is the incontinent man to be confused with the intemperate for the latter is not convinced that his desires are inordinate The continent man is one who when acting against reason kno s that he is do ng so Though both the continent and the temperate man do nothing contrary to the rule of reason for the sake of bodily pleasures the one accord ng to Aristotle has bad appetites the other is free from them

THE CONTINENT MAN is not the only one who gives the appearance of temperance without being really temperate in character Some men says Aristotle are moderate by nature— from the very moment of birth fitted for self con trol What appears to be temperance in them therefore is not in his opinion a virtuous habit acquired by good acts but simply a natural capacity to control their desires or a tempera mental constitution which happens not to be ridden by very strong desires They do not de serve to be praised for their apparent self con trol neither do those who manage to be moder ate about certain pleasures but give themselves free rein with respect to other desires The miser who limits his bodily comforts in order to amass a pile of gold is hardly temperate

Gibbon writes of the Emperor Julian that he seldom recollected the fundamental maxim of Aristotle that true virtue is placed at an equal distance between the opposite vices Julian s lack of temperance appears however not mere ly in the opposite extreme to which he went to express his contempt for luxury sleeping on the ground and renouncing the decencies of dress and cleanliness Though genuinely moderate in some things such as his diet he went to excess in others overdoing his preoccupation with affairs of state and working incessantly for long hours day after day He considered every mo ment as lost that was not devoted to the ad vantage of the public or the improvement of his own mind By this avarice of time Gibbon observes he seemed to protract the short du ration of his reign

Temperance in a particular respect is some times praised as a virtue relative to a specific and limited goal Considering the wealth of na tions Adam Smith looks upon prodigality as a major vice and regards parsimony as an indis pensable virtue Capitals are increased by par simony he writes and diminished by prodi gality and misconduct Parsimony and not industry is the immed ate cause of the increase of capital By what a frugal man annually saves he not only affo ds m intenance to an additional number of product ve hands for th--

or the ensuing year but like the founder of a public workhouse he establishes as it were a perpetual fund for the maintenance of an equal number in all times to come

Capital funds are perverted by the prodigal By not confining his expenses within his income Smith declares he encroaches upon his capital By diminishing the funds designed for the employment of productive labor he necessarily diminishes the quantity of that labor which adds a value to the subject upon which it is bestowed and consequently the value of the annual produce of the land and labour of the whole country If the prodigality of some was not compensated by the frugality of others the conduct of every prodigal by feeding the idle with the bread of the industrious tends not only to beggar himself but to impoverish his country

From the point of view of augmenting wealth Smith may be right in calling every prodigal a public enemy and every frugal man a public benefactor Marx however raises the question whether thrift or parsimony represents moral virtue in the capitalist himself He mocks the classical or what he calls the vulgar economic theory which tends to identify capital with abstinence and taking Adam Smith s statement that industry furnishes the material which saving accumulates he interprets *saving* to mean the *reconversion of the greatest possible portion of surplus value or surplus product into capital*

For Marx the question is in addition to being economic a moral and psychological one He describes the capitalist as suffering from a Faustian conflict between the passion for accumulation and the desire for enjoyment His parsimony or abstinence from certain pleasures hardly signifies genuine temperance for according to Marx the capitalist is like the hoarder who makes a sacrifice of the lusts of the flesh to his gold fetish Elsewhere he says that the boundless greed after riches is common to the capitalist and the miser but while the miser is merely a capitalist gone mad the capitalist is a rational miser

In Marx s opinion the capitalist cannot even boast of personal thrift to any great extent The capitalist gets rich not like the miser in proportion to his personal labor and restricted consumption but at the same rate as he squeezes out the labor power of others and enforces on the laborer abstinence from all life s enjoyments

THESE CONSIDERATIONS OF political economy lead us naturally back to the issue raised earlier concerning the significance of temperance for society or the effect of private intemperance on the public welfare

What is the relation between temperance and justice? Aristotle answers this question in terms of his conception of general justice as including the social aspect of all the other moral virtues To the extent that his courage or temperance can affect others or the common good a man is required by justice to be temperate and brave It is proper for the law he says to bid us do both the acts of a brave man (e g not to desert our post nor take flight nor throw away our arms) and those of a temperate man (e g not to commit adultery nor to gratify one s lust)

Though he accepts Aristotle s notion of general justice Aquinas puts a limitation on the extent to which the positive law of the state can regulate or enforce the acts of a virtue like temperance Because it is framed for a multitude of human beings the majority of whom are not perfect in virtue human laws do not forbid all vices from which the virtuous abstain but only the more grievous vices from which it s possible for the majority to abstain and chiefly those that are injurious to others without the prohibition of which human society could not be maintained The point is not that some acts of temperance cannot be prescribed by law but rather that the human law does not command every act of temperance but only those which are ordainable to the common good

The principle being clear the problem remains extremely difficult when the question is one of regulating certain types of behavior such as insobriety extravagance or adultery

Montesquieu discusses the difficulties of administering under the Julian law the punishments decreed by the Roman emperors against the incontinence of women He considers the advantages and disadvantages relative to different forms of government of sumptuary laws directed at maintaining frugality and avoiding

luxury as for example in Venice where the rich were compelled by laws to moderation and were thus so habituated to parsimony that none but courtesans could make them part with their money As for sobriety he seems to think that the problem varies with the climate the Mohammedan law against the drinking of wine being improper for cold countries where the climate seems to force them to a kind of national intemperance very different from personal inebriety A German drinks through custom and a Spaniard by choice

The reasons which have been offered against the legal prohibition of intoxicants are many and various To those who hold that temperance consists in moderation not abstinence temperance laws are misguided as well as misnamed To others like William James drunkenness as teetotalers use the word is one of the deepest functions of human nature Half of both the poetry and tragedy of human life would vanish if alcohol were taken away To still others like Mill such sumptuary laws are wrong in principle because consumption which they try to regulate is a private matter

If an individual s intemperance injures only himself he may be morally reprobated but Mill holds he ought not to be prosecuted by law A man who through intemperance or extravagance becomes unable to pay his debts or becomes incapable of supporting his family might be justly punished but it is for the breach of duty to his family or creditors not for the extravagance Again Mill writes No person ought to be punished simply for being drunk but a soldier or a policeman should be punished for being drunk on duty Whenever in short there is a definite damage or a definite risk of damage either to another individual or to the public the case is taken out of the province of liberty and placed in that of morality or law

OUTLINE OF TOPICS

REFERENCES

To find the passa es cited use the numbers in heavy type which are the volume and page numbers of the passages referred to For example in **4** HOMER *Iliad* BK II [265 283] **12d** the number **4** is the number of the volume in the set the number **12d** indicates that the pas sage is in section d of page 12

PAGE SECTIONS When the text is printed in one column the letters **a** and **b** refer to the upper and lo er halves of the page For example in **53** JAMES *Psychology* **116a 119b** the passa e begins in the upper half of pa e 116 and ends in the lo er half of page 119 When the text is printed in two columns the letters **a** and **b** refer to the upper and lower halves of the left hand side of the pa e the letters **c** and **d** to the upper and lo er halves of the right hand side of the page For example in **7** PLATO *Symposium* **163b-164c** the passa e begins in the lower half of the left hand side of pa e 163 and ends in the upper half of the ri ht hand side of page 164

Chapter 92 THEOLOGY

INTRODUCTION

IT has seldom been disputed that the questions with which theology deals are of critical significance for all the rest of human knowledge Even those who deny that theology is or can be a science might be willing to concede that if it were it would deserve its traditional title queen of the sciences

It has been said that the great questions of theology are unanswerable It has been said that theological dispute or controversy is futile because the issues are not resolvable by argument But it has rarely been asserted or even implied that our outlook would be unaltered and our actions unaffected if we could know in any degree the answers to questions concerning the existence of the supernatural and its relation to the visible world of nature To Plato it is of such importance that he asks Who can be calm when he is called upon to prove the existence of the gods?

The main controversy not in but about theology turns on the use of such words as knowledge and science *for a discipline* which both in method and conclusion seems compelled to go beyond experience and to push reason to (or even beyond) the limit of its powers In the minds of many especially in our day theology is associated with religion and is opposed to science or if not opposed at least it is set apart from science as entirely different Those who conceive science as limited by its empirical methods to the investigation of observable phenomena might not quarrel with the allocation of theology to philosophy but whether or not they did would in turn depend on their conception of philosophy

As the chapters on SCIENCE and PHILOSOPHY indicate these two terms are identified through a large part of the western tradition The various sciences are regarded as branches of philosophy But we also find a distinction being made in the 18th century between the empirical and rational or philosophical sciences and in our day those who regard philosophy as mere speculation or opinion contrast it to the experimental disciplines which are thought to be the *only* established bodies of knowledge that is sciences

The question whether theology is a science may therefore embrace a number of alternatives That it is an empirical or experimental science has seldom been proposed It may be treated as a science however by those who consider it as a part of philosophy or it may be denied that honor precisely because it belongs to philosophy A third alternative remains— that theology is separate from philosophy that it is a science as distinct in character from the philosophical sciences as they are from the experimental disciplines In this third alternative the association of theology with religion or religious faith seems to determine the character of theology

It is this third alternative which Hume seems *to have in mind at the conclusion of his Enquiry* Divinity or Theology as it proves the existence of a Deity and the immortality of souls has he writes a foundation in *reason* so far as it is supported by experience But its best and most solid foundation is *faith* or divine revelation To the extent that its principles come from religious faith theology does not seem to fit perfectly into Hume s twofold division of the sciences into those which involve abstract reasoning concerning quantity or number and those which involve experimental reasoning concerning matter of fact and existence

When he says that he would commit to the flames any volume of divinity or school metaphysics which does not contain either of these two kinds of reasoning —for then it can contain nothing but sophistry and illusion —he can hardly be condemning the theology he has

himself described as resting primarily on faith or divine revelation though it may also have some foundation in reasoning from experience

THE DISCUSSION OF THE nature and scope of theology its principles and methods may refer either to the theology which is a part of philos ophy or to the theology which is sometimes called dogmatic because it expounds and ex plains the dogmas of a rel gious faith Further more those who make the distinction between the two kinds of theology raise questions con cerning their relation to one another In so do ing they enter into the larger problem of the relation of faith and reason and the limited part which reason can play in the development of a theology which rests on faith

The d stinction itself is made by many *writers and in diverse ways The theology which* is entirely philosophical and independent of any religious faith is usually called natural theology The name sacred theology is given to a body of doctrine which finds its fundamen tal prin iples in the articles of a religious faith The ultimate source of these articles of faith in Jewish Christian and Mohammedan theolo y is the truth revealed in a sacred scripture—the Old and New Testament or the Koran—from which by interpretation the articles of faith are drawn

Bacon for example defines divine philos ophy or natural theology as that knowledge or rudiment of knowledge concerning God which may be obtained by the contemplat on of h s creatures which knowledge may be truly te med divine in respect of the object and nat ural in respect of the light The bounds of th s knowledge are that it suffices to convince athe ism but not to inform religion In contrast inspired theology or sacred theology (which in our id om we call divinity) is grounded only upon the w rd and oracle of God and not up on the light of nature

Kant makes a similar d stinction when he says that theology is based either on rea on alone (*theolog a rat onal s*) or upon revelation (*theologia revelata*) But for Kant natural the ology designates only one kind of rational the ology Another kind is transcendental theol ogy which differs from the first in the method which reason employs He also differentiates be tween speculative and moral theology Though both fall within the sphere of reason one is the work of the pure theoretic reason the other of the pure practical reason

In the opening question of the *Summa Theo logica* Aquinas tries to explain why in addition to the philosophical science built up by reason there should be a sacred science learned through revelation To an objection which claims that there is no need of any further knowledge be cause philosophical science can attain to knowl edge even of God Himself he replies that there is no reason why those things which may be learnt from philosophical science so far as they can be known by natural reason may not also be taught us by another science so far as they fall within revelation Though they may deal with the same object sciences are differ *entiated according to the various means through* which knowledge is obtained Hence the theology included in sacred doctrine differs in kind from that theology which is part of ph los ophy

In another place Aquinas refers to the theo logical conclusions which the philosopher thinks he can demonstrate— the existence of God and other like truths about God which can be known by natural reason Of these he says that they are not articles of faith but are pre ambles to the articles Nevertheless he adds there is nothing to prevent a man who cannot grasp a proof accepting as a matter of faith something which in itself is capable of being scientifically known and demonstrated But such propositions which belong to both reason and faith are only part of sacred doc trine In addition there are the propositions which belong to faith alone

It is impossible Aquinas writes to attain to the knowledge of the Trinity by natural reason The triune nature of the Godhead can not be demonstrated philosoph cally nor can the dogma be fully comprehended by human understanding In Purgatory Dante learns that

Mad is he who hopes that our reason can tra verse the infinite way which One Substance in Three Persons holds

Though it is not a theological myst ry in the same sense another example of a dogma not demonstr ble by reason is the proposition that the world began to be That the world did not

always exist Aquinas declares we hold by faith alone it cannot be proved demonstratively which is what was said above of the mystery of the Trinity We find in Sacred Scripture the words *In the beginning God created heaven and earth* in which words the newness of the world is stated and so the newness of the world is known only by revelation

With respect to such matters as belong to faith alone a theologian like Aquinas cautions against the misuse of reason When anyone in the endeavor to prove what belongs to faith brings forward arguments which are not cogent he falls under the ridicule of the unbelievers since they suppose that we base ourselves upon such arguments and that we believe on their account Therefore we must not attempt to establish what is of faith except by authority alone and only to those who accept the authority For those who do not accept the authority of Scripture the most that reason can do concerning propositions peculiar to faith is to prove that what faith teaches is not impossible Elsewhere Aquinas points out that although the argument from authority based on human reason is the weakest yet the argument from authority based on divine revelation is the strongest

THE FOREGOING THROWS some light on Montaigne s defense of a book by Raimond de Sebonde bearing the title *La theologie naturelle* Though he calls his work natural theology de Sebonde according to Montaigne undertakes by human and natural reasons to establish and make good against the atheists all the articles of the Christian religion What his opponents reprehend in his work is that Christians are to blame to repose upon human reasons their belief which is only conceived by faith and the particular inspiration of divine grace

Montaigne agrees that it is faith alone that vividly and certainly comprehends the deep mysteries of our religion But he also thinks that it is a brave and very laudable attempt to accommodate the natural and human capabilities that God has endowed us with to the service of our faith It is not to be doubted he says that it is the most noble use we can put them to and that there is no design or occupation more worthy of a Christian man than to make it the aim and end of all of his thoughts and studies to embellish extend and amplify the truth of his belief

The conception of natural theology which Montaigne appears to entertain in his Apology for Raimond de Sebonde does not seem to differentiate it from sacred theology insofar as all its principles are articles of faith Quite apart from de Sebonde Montaigne himself does not think that the existence of God or the immortality of the soul can be demonstrated by reason Montaigne observes how short the most constant and firm maintainers of this just and clear persuasion of the immortality of the soul fall and how weak their arguments are when they go about to prove it by human reason Let us ingenuously confess that God alone has dictated it to us and faith tis no lesson of nature and our own reason

Though the denial of God s existence is according to Montaigne a proposition unnatural and monstrous difficult also and hard to establish in the human understanding he thinks the affirmation to be no less beyond reason s power to establish with certitude for all things produced by our own reasoning and understanding whether true or false are subject to incertitude and controversy

In this Montaigne differs not only from a theologian like Aquinas who assigns certain truths to natural theology as capable of being demonstrated by reason without the aid of faith but also from such philosophers as Descartes Spinoza and Locke who hold that we can know God by reason with more certainty and even (according to Spinoza) more adequately than we can know most other things

I have always considered Descartes writes that the two questions respecting God and the Soul were the chief of those that ought to be demonstrated by philosophical rather than theological argument For although it is quite enough for us faithful ones to accept by means of faith the fact that the human soul does not perish with the body and that God exists it certainly does not seem possible ever to persuade infidels of any religion unless we begin with we prove these two facts by means of the natural reason

Descartes it appears reserves the use of the

word theology for sacred doctrine What others like Bacon call natural theology he treats simply as philosophy or that branch of it which he calls metaphysics Dedicating his *Meditations* to the dean and doctors of the sacred faculty of theology in Paris he says I have noticed that you along with all the theologians did not only affirm that the existence of God may be proved by the natural reason but also that it may be inferred from the Holy Scriptures that knowledge of Him is much clearer than that which we have of many created things and as a matter of fact is so easy to acquire that those who have it not are culpable in their ignorance

But Descartes wishes to confess the limitations of the mere philosopher s knowledge of God When he came to inquire how God may be more easily and certainly known than the thin s of this world no matter how much certainty and evidence I find in my reasons he could not persuade himself he says that all the world is capable of understanding them There are not so many in the world who are fitted for metaphysical speculations as there are for those of geometry

Answering a critic who quotes Aquinas against him he later writes I admit along with all theologians that God cannot be comprehended by the human mind and al o that He cannot be distinctly known by those who try mentally to grasp Him at once in His entirety

Wherever I have said that God can be clearly and distinctly known I have understood this to apply only to this finite cognition of ours which is proportionate to the diminutive capacity of our minds

So FAR WE HAVE considered the distinction between natural and sacred theology—or between philosophy and theology—as it is made in the Christian tradition by writers conscious of the difference between faith and reason or revelat on and demonstration In pagan ant quity there seems to be no equivalent of sacred theology The various modes of worship which prevailed in the Roman world Gibbon tells us we e all considered by the people as equally true by the philosopher as equally fal e and by the magistrate as equally useful The superstition of the people was not embittered by theological rancour nor was it confined by the chains of any speculative system It was the elegant mythology of Homer he says not reasoning which gave a beautiful and almost a regular form to the polytheism of the ancient world

Of the Greek philosophers Gibbon remarks that they meditated on the Divine Nature as a very curious and important speculation but only the Stoics and the Platonists endeavored to reconcile the jarring interests of reason and piety Plato s criticism of the poets in the *Republic* for their impiety and his rational defense of piety in the *Laws* accompanied by a demonstration of the existence of the gods may be taken as examples of ancient theological discourse within a religious context Another example and from quite another point of view is Cicero s *De Natura Deorum* which Gibbon praises as the best guide to the opinions of the philosophers concerning the tenets of polytheism

But neither Cicero nor Plato treats theology as a science The ancient philosopher who does and who moreover regards theology as the highest of the speculative sciences seems to proceed without reference to or benefit of prevailing religious beliefs Aristotle dismisses the school of Hesiod and all the theologians [who] thought only of what was plausible to themselves He refers to the legends of the gods which our forefathers in the most remote ages have handed down to their posterity in the form of a myth with a view to the persuasion of the multitude and to its legal and utilitarian expediency But the highest science which Aristotle sometimes calls first philosophy he also calls theology It deals with the immaterial and the insensible the immovable and eternal We may call it theology he writes since it is obvious that if the divine is present anywhere it is present in things of this sort In another place he says there are three kinds of theoretical sciences—physics mathematics theology and of these the last named is best for it deals with the highest of existing things

At the beginning of the *Metaphys cs* Aristotle gives another reason for thinking that theology is a divine science not that it is divinely inspired but that having the divine for

its object it is the science most meet for God to have Such a science either God alone can have or God above all others The title given the book in which Aristotle attempts to develop this science comes in the later tradition to be the name given to speculation concerning immaterial and insensible substances What Aristotle calls theology Descartes as we have seen calls metaphysics in order to distinguish it from the theology based on revelation

Whether the theology of a pagan philosopher is commensurable with the theology of Jewish or Christian thinkers even when the latter attempt to be purely philosophical or natural theologians is a question which deeply probes the relation of reason to faith For even when reason tries to proceed independently of faith the religious faith of a community may tinge the concepts the philosopher uses and define the problems he undertakes to solve It may be one thing to prove the existence of a Prime Mover and another to know by reason the nature and existence of the God who in the beginning created heaven and earth—the God of Abraham Isaac and Jacob the God of the Christians whom Pascal distinguishes from the God of the philosophers

Augustine explains his attitude as a theologian toward the theories of the philosophers touching divine matters I have not undertaken he says to refute all the vain theological opinions of all the philosophers but only of such of them as agreeing in the belief that there is a divine nature and that this divine nature is concerned about human affairs do nevertheless deny that the worship of the one unchangeable God is sufficient for the obtaining of a blessed life after death as well as at the present time Since Plato defined the wise man as one who imitates knows and loves this God and who is rendered blessed through fellowship with Him in His own blessedness why discuss with the other philosophers? It is evident that none come nearer to us than the Platonists

Plato according to Augustine is justly preferred to all the other philosophers of the Gentiles those among his followers who show the greatest acuteness in understanding him entertain such an idea of God as to admit that in Him are to be found the cause of existence the ultimate reason for the understanding and the end in reference to which the whole life is to be regulated So amazing to his mind are the parallels between certain insights expressed by Plato and the wisdom of Sacred Scripture that Augustine is almost inclined to believe that Plato was not ignorant of those writings But he does not think it necessary to determine whether Plato had acquaintance with the writings of Moses and the prophets because certain basic truths which were revealed to the Hebrews were made known to the gentiles through the light of nature and reason That which is known of God the apostle had said has been manifested among them for God hath manifested it to them

Therefore Augustine feels justified in taking any truth from Plato which is consistent with Christian faith Aquinas borrowing much from Aristotle explains that sacred doctrine makes use of the authority of philosophers in those questions in which they were able to know the truth by natural reason Sacred theology uses the doctrines of the philosophers he adds not as though it stood in need of them but only in order to make its teaching clearer It is in this sense that Aquinas calls philosophy the handmaiden of theology

Others seem to take a different view of this relationship Montaigne wonders whether it would not be better if the divine doctrine as queen and regent of the rest kept herself apart and he quotes St Chrysostom to the effect that philosophy has long been banished from the holy schools as a handmaid altogether useless Hobbes goes further He describes the traditional theology as a mingling of Aristotle's metaphysics with Scripture and claims that the bringing of the philosophy and doctrine of Aristotle into religion by the Schoolmen caused the many contradictions and absurdities which brought the clergy into a reputation both of ignorance and of fraudulent intention and inclined people to revolt from them.

Hegel however dismisses the criticism that is often made concerning the dependence of Christian theology at least in its formative period on pagan philosophy The Fathers of the Church and the Councils he writes constituted the dogma but a chief element in this constitution was supplied by the previous de-

velopment of *philosophy* That certain dogmas were introduced into the Christian religion through the instrumentality of philosophy is not sufficient ground for asserting that they were foreign to Christianity and had nothing to do with it It is a matter of perfect indifference where a thing originated the only question Hegel insists is Is it true in and for itself? Many think that by pronouncing the doctrine to be Neo Platonic, they have *ipso facto* banished it from Christianity Whether a Christian doctrine stand exactly thus and thus in the Bible is not the only question The Letter kills, the Spirit makes alive

COMPARED WITH SACRED theology the subject matter of natural theology and the scope of its problems seem to be extremely narrow At most it is only a part of philosophy and some writers treat it as no more than one part of metaphysics

Kant for example divides metaphysics into three parts—theology cosmology and psychology—according to his conception of metaphysics as having for the proper object of its inquiries only three grand ideas God Freedom and Immortality As a branch of transcendental speculation theology is concerned primarily with the problem of God s existence Similarly Aristotle s metaphysical inquiries include more than his theology His theology begins only after he has discussed the nature and being of sensible substances It is stated mainly in Book XII of the *Metaphysics* where he considers the existence and character of immaterial substances *and of the one purely actual being* which is God

Descartes conception seems to be broader for he regards the immortality of the soul as well as the existence and nature of God as being characteristically theological problems even when they are treated in metaphysics and by the methods of the philosopher Because these two problems concern spiritual beings Adam Smith also groups them together under the name pneumatics or pneumatology which he identifies with metaphysics—that part of philosophy most emphasized in the universities of Europe where philosophy was taught only as subservient to theology Bacon alone seems to separate natural theology entirely from metaphysics which along with physics is for him a part of natural rather than divine philosophy But though he would limit natural theology to that knowledge of God which can be drawn from nature and excludes attempts to induce from nature any verity or persuasion concerning the points of faith he grants that natural as well as divine theology may treat of the nature of angels and spirits as neither inscrutable nor interdicted

The subject matter of sacred theology or what he calls divinity is according to Bacon s account much more extensive He first divides it into matter of belief and matter of service and adoration and from these two derives the four main branches of divinity faith manners liturgy and government The matter of faith contains the doctrine of the nature of God of the attributes of God and of the works of God Under manners Bacon lists the consideration of divine law and the breach of it by sin liturgy concerns the sacraments and rituals of religion government the organization offices and jurisdictions of the church

As its title indicates the *Summa Theologica* of Aquinas endeavors to set forth the sum of theological knowledge In addition to the topics and problems peculiar to sacred doctrine the subject matters treated in the *Summa* seem to represent the whole range of human inquiry—almost co-extensive with the scope of the natural sciences and philosophy both speculative and moral

Aquinas explains the encyclopedic character of the *Summa* by pointing out that to have God *as the subject matter of theology means that* sacred doctrine treats all things under the aspect of God either because they are God Himself or because they refer to God as their beginning and end The unity of theology in covering so wide a diversity of matters consists in the single formality under which they are considered—the formality of being divinely revealed That is why objects which are the subject matter of different philosophical sciences can yet be treated by this one single sacred science under one aspect namely insofar as they can be included in revelation

Thus for example in the preamble to his Treatise on Man Aquinas writes The theologian considers the nature of man in relation to

the soul but not in relation to the body except insofar as the body has relation to the soul This emphasis is dictated by the articles of Christian faith which concern man in both body and soul Similarly with respect to moral matters Aquinas explains that the theologian considers human acts inasmuch as man is thereby directed to happiness and he takes account of the circumstances of human acts because they may excuse from sin the consideration of which belongs to the theologian It belongs to the theologian only when sin is conceived as an offense against God but to the moral philosophers when it is conceived as something contrary to reason

IT APPEARS FROM THE foregoing that sacred theology is both speculative and practical (or moral) It deals with the nature of divine things and with human acts but with the latter only so far as they have God for their rule or end Although among the philosophical sciences Aquinas writes some are speculative and others practical sacred doctrine includes both

Even though it is made on the level of the philosophical sciences Kant s distinction between speculative and moral theology seems to be based on a different principle For Aquinas the speculative and the practical parts of theology deal with different problems such as God the Trinity creation and the angels on the one hand and beatitude the virtue divine law sin grace and sacraments on the other But for Kant both speculative and moral theology deal with the problem of God s existence They differ only according to the manner in which the theoretic and the practical reason undertake to solve this problem

All attempts of reason to establish a theology by the aid of speculation alone are fruitless writes Kant Consequently a rational theology can have no existence unless it is founded upon the laws of morality The postulates of pure practical reason—of immortality free will and the existence of God— all proceed from the principle of morality which is not a postulate but a law by which reason determines the will directly The moral law involves as a necessary condition the existence of the *summum bonum* and that in turn involves the supposition of the supreme independent good that is the existence of God

According to Kant a Supreme Being is for the speculative reason a mere ideal though a faultless one—a conception which perfects and crowns the system of human cognition but the objective reality of which can neither be proved nor disproved by pure reason It is this defect which moral theology remedies We must assume he says a moral world cause that is an Author of the world if we are to set before ourselves a final end in conformity to the moral law But he adds this moral argument is not intended to supply an objectively valid proof of the existence of God It is not meant to demonstrate to the skeptic that there is a God but that he *must adopt* the assumption of this proposition as a maxim of his practical reason if he wishes to think in a manner consistent with morality

THE PROBLEM OF THE proof of God s existence though central in theology is more fully discussed in the chapter on GOD Here we are concerned with the nature of theology itself as a branch of learning or inquiry Since the chapter on METAPHYSICS necessarily touches on theology as a philosophical discipline it seems advisable to devote attention here to some of the things which are peculiarly the concern of sacred theology

Heresy is one of these A scientist or philosopher may be criticized for his errors but only a theologian only the man who tries to explain some article of faith can be called a heretic in the strict sense of that word According to his view of the relation between church and state Hobbes defines heresy in political terms Heresy he writes is nothing else but a private opinion obstinately maintained contrary to the opinion which the Public Person —i e the Sovereign— has commanded to be taught But according to Pascal none but God was able to instruct the Church in the faith and so it is heresy to resist the decisions of the faith because this amounts to an opposing of our own spirit to the Spirit of God" But he adds it is no heresy though it may be an act of presumption to disbelieve certain particular facts because this is no more than opposing reason—it may be enlightened reason—

to an authority which is great indeed but in this matter is not infallible

The aspect of choice of obstinately preferring one s own opinion against a superior authority is emphasized by Aquinas but he adds the specification that heresy is a corruption of Christian faith a species of unbelief in which the heretic defies the authority of the Church choosing not what Christ really taught but the suggestions of his own mind He quotes a statement by Augustine that we should not accuse of heresy those who however false and perverse their opinion may be defend it without obstinate fervor and are ready to mend their opinion when they have found the truth because they do not make a choice in contradiction to the doctrine of the Church It is not the falsity of the opinion which makes it heresy for until the point of faith has been defined by the authority of the Church theologians may differ and even be in error without being heretical

The inference may be drawn that progress is made in the refinement and precision of theological doctrine as the dogmas of a religion are more fully stated and the line between orthodoxy and heresy becomes more clearly defined Augustine who is one of the great formative theologians for the Protestant as well as the Catholic tradition devotes a large part of his writing to the criticism of heresies—the great Arian heresy concerning the Trinity the Nestorian or Monophysite heresy concerning the Incarnation the Manichean heresy concerning the existence of evil and the Pelagian heresy concerning grace and good works

While the hot restlessness of heretics Augustine writes stirs questions about many articles of the catholic faith the necessity of defending them forces us to investigate them more accurately to understand them more clearly and to proclaim them more earnestly and the question mooted by an adversary becomes the occasion of instruction According to Aquinas the profit that ensues from heresy is beside the intention of heretics for it consists in the constancy of the faithful being put to the test and makes us shake off our sluggishness and search the Scriptures more carefully

To Augustine and Aquinas theological argument and controversy seem to be serviceable in the propagation and defense of the faith Aquinas for example distinguishes the various types of dispute in which a Christian theologian can engage—with heretics with Jews with infidels We can argue with heretics from texts in Holy Scripture he writes and against those who deny one article of faith we can argue from another If our opponent believes nothing of divine revelation there is no longer any means of proving the articles of faith by argument but only of answering his objections—if he has any—against faith

But it is necessary to add the qualification that the reasons employed to prove things that are of faith are not demonstrations they are either persuasive arguments showing that what is proposed by faith is not impossible or else they are proofs drawn from the principles of faith *i e* from the authority of Holy Writ Whatever is based on these principles is as well proved in the eyes of the faithful as a conclusion drawn from self evident principles is in the eyes of all

Furthermore Aquinas points out since faith rests upon infallible truth and since the contrary of a truth can never be demonstrated it is clear that the proofs brought against faith are not demonstrations but arguments that can be answered Descartes seems to hold a similar view Defending his opinions in a letter to Father Dinet he declares As to theology as one truth can never be contrary to another it would be a kind of impiety to fear that the truths discovered in philosophy were contrary to those of the true Faith

A SOMEWHAT CONTRARY view of the relation of faith and reason seems to be taken by Locke Whatever God hath revealed he says is certainly true no doubt can be made of it This is the proper object of faith but whether it be a divine revelation or no reason must judge Reason not faith is the ultimate test of truth in theology as in philosophy Reason must be our last judge and guide in everything If reason finds something to be revealed from God reason then declares for it as much as for any other truth and makes it one of her dictates

In many of the great books we find a less

favorable view of the merit or profit in theological controversy Its excesses and mumbo jumbo are travestied and caricatured by Rabelais and Sterne its futility and folly are the subject of bitter complaint by Hobbes and Bacon its intolerance is condemned by Locke and Mill Gibbon who reports the disputes which raged through ten centuries of Christendom seldom speaks kindly of the disputants He refers to the exquisite rancor of theological hatred and in describing the fury of the conflict between the Arians and the defenders of the Nicene creed he says that in the midsts of their fierce contentions they easily forgot the doubt which is recommended by philosophy and the submission which is enjoined by religion

In the Middle Ages mystical theologians like Peter Damiani or Bernard of Clairvaux attack as impious or irreligious the kind of theology which borrows from the philosophers and makes use of the liberal arts especially the techniques of the dialectician In similar vein Protestant reformers like Luther later attack theology itself as detrimental to the purity of Christian faith and the spirit of religion It is in this vein also that Bacon deplores the unprofitable subtility or curiosity and the fruitless speculation or controversy in divinity and speaks of the extreme prejudice which both religion and philosophy have received and may receive by being commixed together

When the Student in *Faust* says I'm now almost inclined to try Theology Mephistopheles replies

> I would not wish to lead you so astray
> In what this science touches it would be
> So hard to shun the false misleading way
> So much of hidden poison lies therein
> You scarce can tell it from its medicine

That however is the voice of the devil and from the point of view of those who see no conflict between faith and reason or between piety and inquiry the attempt to separate religion from theology often looks diabolical

Chapter 93 TIME

INTRODUCTION

DEVOURING Time wasteful Time this bloody tyrant Time —Time is the predatory villain with whom not only the lover but all men must contend The sonnets of Shakespeare make war upon Time s tyranny—to stay Time s scythe to preserve whatever of value can be kept from the wastes of time and to prove that Love s not Time s fool entirely

Yet viewing the almost universal depredations of Time the poet fears that love may not escape Time s ruin

When I have seen by Time s fell hand defaced
The rich proud co t of out orn bur ed age
When sometime lofty to vers I see do n ra ed
And brass eternal slave to mortal rage
When I have seen the hungry ocean gain
Advantage on the kingdom of the shore
And the f rm so l win of the aters m in
Increa ing store with loss and loss v th store
When I have seen such intercl nge of state
Or state itself confounded to decay
Ruin hath ta ght me thus to rum nate
That Time w ll come and take my lo e a ay
Th s thought is as a death h ch c n ot choose
But weep to ha e that hich it fears to lose

The lover knows that he cannot save h s love from change and her beauty from decay Time is too much for him But when the lover is also a poet he may hope to defeat Time not by making his love last forever but by making the memory of it immortal Do thy worst old Time he can say despite thy wrong My lo e shall in my verse ever live young Or again

Since b a s, n r stone nor earth nor boundless sea
But sad m tal ty o r sways the po
How ith this ra e shall be utv hold plea
Wh se act n is no st on er tha a fl er?
O ho hall s mm s hon y breath hold out
Ag n t the wreckf l eg of battering days
Wh n rocks impre nabl re not so tout
Nor g tes of steel so t ong b t T me decays?
O fearful meditation! where alack
Shall Time s best jewel from Time s chest lie hid?
Or what strong hand can hold his swift foot back?
Or who his spo l of beauty can forb d?
O none unless this miracle have might
That in black ink my lo e may still shine bright.

But the poet may have the cast of a theologian rather than a lover He may as Milton does stand not in awe or fear but in contempt of Time willing to wait while Time runs out its race Milton bids Time

glut thyself with what thy omb devours,
Which is no more than what is false and vain
And merely mortal dross
So little is our loss
So little is thy gain
For when as each thing bad thou hast entomb d
And last of all thy greedy self consum d
Then long Eternity shall greet our bl ss
With an individual kiss
The ı all this Earthly grossness quit
Attir d with Stars e shall f re er sit
Triumphin over Death and Chance and thee
O Time

A philosopher like Marcus Aurelius neither defies nor despises time He enjoins himself to accept the mutability of all things as fitting and suitable to universal nature Dost thou not see he asks himself that for thyself also to change is just the same and equally necessary for the universal nature? To him it seems no evil for things to undergo change nor is he oppressed by the image of Time as a river made up of the events which happen and a violent stream for as soon as a thing has been seen it is carried away and another comes in its place and this will be carried a vay too

For man to resign himself to time s passage Pascal thinks requires no special effort Our nature consists in motion le says comple e rest is death Time fits our nature not only because it heals griefs and quarrels but because time s perpetual flo vasl es away the

desperate ennui men suffer when they feel themselves imprisoned in the present

Just as we seek and multiply diversions as means to escape from ourselves so according to Pascal when we are dissatisfied with the present we anticipate the future as too slow in coming or we recall the past to stop its too rapid flight For the present is generally painful to us. Let each one examine his thoughts, and he will find them all occupied with the past and the future The past and present are our means the future alone is our end So we never live but we hope to live and as we are always preparing to be happy it is inevitable we should never be so

THESE ARE ONLY SOME of the conflicting attitudes toward time and mutability which express man s desire for permanence for the eternity of a now that stands still or his restless weariness his avidity for the novelties time holds in store Wherever in the great books of poetry philosophy or history men reflect upon their loves and aspirations their knowledge and their institutions they face man s temporality It is not that man alone of earthly things has a time ridden existence but that his memory and imagination enable him to encompass time and so save him from being merely rooted in it Man not only reaches out to the past and future but he also sometimes lifts himself above the whole of time by conceiving the eternal and the immutable

Man s apprehension of the past and future is discussed in the chapter on MEMORY AND IMAGINATION The bent of his mind or his striving toward the unchanging the everlasting the eternal is considered in the chapter on CHANGE Here we are concerned with his examination of time itself.

Though the idea of time is traditionally linked with that of space it seems to be much more difficult to grasp In addition to provoking opposite emotion from the poets it seems to engage the philosophers in a dispute about its intelligibility This goes deeper than conflicting definitions or analyses such as occur in the discussion of both space and time Whereas time seems no less clear than space to some thinkers to others it is irremediably obscure Struggling to say what it is and how it exists they are exasperated by its evanescence as an object of thought

Aristotle indicates some initial difficulties in the consideration of time It is not itself a movement yet neither does time exist without change Time is neither movement nor independent of movement Furthermore according to Aristotle time is a continuous quantity Time past present and future forms a continuous whole. But the very nature of a continuous quantity is to be divisible The present moment however—the now which is the link of time and the dividing line between past and future—seems to be an indivisible instant

If the present had an extended duration Aristotle points out it would have to include parts some of which would be past and some future Hence though the present seems to be a part of time it is unlike the rest of time indivisible and though it separates past and future yet it must also somehow belong to both for otherwise time would not be continuous The now is an end and a beginning of time not of the same time however but the end of that which is past and the beginning of that which is to come

If we conceive of some point of time which cannot be divided into even the minutest parts of moments Augustine writes that is the only point that can be called the present and that point flees at such lightning speed from being future to being past that it has no extent of duration at all Only past time and future time can be called long or short Only they have duration But in what sense Augustine asks can that which does not exist be long or short? The past no longer is the future is not yet

The past and future it seems have duration or at least extent but no existence. The present exists but does not endure What then *is* time? If no one asks me Augustine says I know if I want to explain it to a questioner I do not know All the words with which we speak of time and times are the plainest and commonest of words yet again they are profoundly obscure and their meaning remains to be discovered

Augustine returns again and again to the point that we measure time *in its passing* But he says if you ask me how I know this my answer is that I know it because we measure

time and we cannot measure what does not exist and the past and future do not exist But how do we measure time present since it has no extent and where does time come from and by what way does it pass and where does it go to while we are measuring it? Where is it from?—obviously from the future By what way does it pass?—by the present Where does it go?—into the past In other words it passes from that which does not exist by way of that which lacks extension into that which is no longer

The more he reflects on time and its measurement the more Augustine is perplexed the more he is forced to say I still do not know what time is He realizes that he has been talking of time for a long time and this long time would not be a long time unless time has passed But how do I know this since I do not know what time is? It seems to him true that we measure time and yet he must say I do not know what I am measuring It seems to him that time is certainly extendedness—but he must add I do not know what it is extendedness of

Berkeley suggests that the difficulties in understanding time may be of our own making Bid your servant meet you at such a *time* in such a place and he shall never stay to deliberate on the meaning of those words But if *time* be taken exclusive of all those particular actions and ideas that diversify the day merely for the continuation of existence or duration in the abstract then it will perhaps gravel even a philosopher to comprehend it

For my own part Berkeley goes on to say whenever I attempt to frame a simple idea of *time* abstracted from the succession of ideas in my own mind which flows uniformly and is participated by all beings I am lost and embrangled in inextricable difficulties I have no notion of it at all

To those who conceive time as a mathematical magnitude or as a physical dimension there seems to be no difficulty about its definition or a precise statement of its properties So considered time appears to be no less intelligible than space for when it is so considered it is being treated exactly like space—not as a property of things not as relative to bodies or their motions but as an extensive manifold capable of being occupied by things and in which they exist and move

As in what Einstein calls the four-dimensional space time continuum (which comprises three space coordinates and one time coordinate) time is merely one dimension among others so in Newton s theory time and space are also given parallel treatment Times and spaces Newton writes are as it were the places as well of themselves as of all other things All things are placed in time as to order of succession and in space as to order of situation Einstein criticizes Newtonian mechanics for its habit of treating time as an independent continuum yet Newton no less than Einstein appears to conceive time and space alike as dimensions even if he conceives them in separation from one another

But if time and space are something to be occupied or filled they can also be thought of as unoccupied or empty The opposition discussed in the chapter on SPACE between those who think of space in itself as empty and those who deny a void or vacuum seems to be paralleled here by the issue concerning empty time—time apart from all change or motion time in itself. Waiving for the moment the question whether such time exists or is only a mathematical abstraction we can see that this time may be more susceptible to analysis than the time of ordinary experience the time which according to Lucretius no one feels by itself abstracted from the motion and calm rest of things

Newton explains that he does not define time space place and motion because they are well known to all But he observes that men commonly conceive these quantities under no other notions but from the relation they bear to sensible objects He finds it necessary therefore to distinguish each of them into absolute and relative true and apparent mathematical and common

By absolute true and mathematical time Newton means that which of itself and from its own nature flows equably without relation to anything external and by another name is called duration In contrast relative apparent and common time is some sensible and external (whether accurate or unequable) measure of duration by the means of motion which

is commonly used instead of true time such as an hour a day a month a year In astronomy Newton points out absolute time is distinguished from relative by the equation or correction of the apparent time For the natural days are truly unequal though they are commonly considered as equal and used for measures of time astronomers correct this inequality that they may measure the celestial motions by a more accurate time.

Newton seems to be saying that time measures motion and also that it is measured by it If his distinction between absolute and relative time is ignored his theory of time does not appear to be very different from that of Aristotle who says not only do we measure the movement by the time but also the time by the movement Insofar as movement or change involves a sequence in which one part comes after another time measures it by numbering the *befores* and *afters* But we also judge the len th of the time according to the duration of the movement and in this sense the movement measures time

As both Aristotle and Augustine point out time measures rest as well as motion for in Aristotle s words all rest is in time Time is not motion but the number of motion and what is at rest can be in the number of motion Not everything that is not in motion can be said to be at rest —but only that which can be moved though it actually is not moved

But where Aristotle in defining time as the measure of motion or rest makes time an attribute of movement Newton regards absolute time as the perfect measure of motion precisely because its nature is independent of all physical change Only relative time depends on motion and that is the time which is measured by motion not the measure of it Those who confound real quantities with their relations and sensible measures Newton declares defile the purity of mathematical and philosophical truths

Distinguishing between duration and time Locke expresses in another way the difference between Newton and Aristotle Time for Locke is that portion of duration which consists of definite periods and is measured by the motion of bodies We must therefore carefully distinguish betwixt duration itself and the measures we make use of to judge its length Duration in itself is to be considered as going on in one constant equal uniform course but none of the measures which we make use of can be known to do so It seems wrong to Locke to define time as the measure of motion when, on the contrary it is motion— the motion of the great and visible bodies of the world —which measures time

What Locke calls duration seems to be the same as Newton s absolute time It is in no way relative to the existence of bodies or motion Just as space or as he calls it expansion is not limited by matter so duration is not limited by motion As place is that portion of infinite space which is possessed by and comprehended within the material world and is thereby distinguished from the rest of expansion so time is so much of infinite duration as is measured by and coexistent with the existence and motions of the great bodies of the universe

MANY ISSUES ARE RAISED by absolute time or infinite duration conceived as independent of all bodily motions Einstein for example challenges the classical notion of simultaneity according to which two events taking place a great distance from one another are said to occur *at the same time* that is at the same moment in the absolute flow of time

Before the advent of the theory of relativity he writes it had always been tacitly assumed in physics that the statement of time had an absolute significance *i e* that it is independent of the state of motion of the body of reference But if the world of physical events is a four dimensional manifold in which the time coordinate is always associated with the space coordinates for any reference-body under observation then every reference body (coordinate system) has its own particular time and Einstein adds unless we are told the reference body to which the statement of time refers there is no meaning in a statement of the time of an event

There is also the issue of the emptiness of that part of absolute time or infinite duration which comes before or after the existence of the world comparable to the issue concerning the void or empty space beyond the borders of the material universe Those who regard time as

relative to and inseparable from motion deny the possibility of such empty time

For Plato as for Christian theologians like Augustine and Aquinas time itself is created with the creation of the heavenly bodies and their motions As the story of the world s becoming is told in the *Timaeus* the maker resolved to have a moving image of eternity and when he set in order the heaven he made this image eternal but moving according to number while eternity itself rests in unity and this image we call time Time then and the heaven came into being at the same instant

Augustine undertakes to answer those who agree that God is the Creator of the world but have difficulties about the time of its creation He asserts that there is no time before the world For if eternity and time are rightly distinguished by this that time does not exist without some movement and transition while in eternity there is no change who does not see that there could have been no time had not some creature been made which by some motion could give birth to change I do not see Augustine continues how God can be said to have created the world after spaces of time had elapsed unless it be said that prior to the world there was some creature by whose movement time could pass But the existence of a creature prior to creation is impossible Hence Augustine concludes that if in the world s creation change and motion were created then the world and time were simultaneously created

Though the existence of a creature prior to creation is impossible it is not impossible according to Aquinas for the created world to be coeval with its Creator While he rejects the opinion of those who assert that the world now exists without any dependence on God and who deny that it was ever made by God he entertains as possible the view that the world has a beginning not of time but of creation Those who hold this view he explains mean that it was always made For just as if a foot were always in the dust from eternity there would always be a footprint which without doubt was caused by him who trod on it so also the world always was because its Maker always existed

It does not necessarily follow Aquinas admits that if God is the active cause of the world He must be prior to the world in duration because creation by which He produced the world is not a successive change But Aquinas does not think that the question whether the world and time began with creation or has always co-existed with its Creator can be resolved by reason The newness of the world he says is known only by revelation.

That the world did not always exist we hold by faith alone it cannot be proved demonstratively In saying this he is not unmindful of the fact that Aristotle advances arguments to show that there can be no beginning to either time or motion Since time cannot exist and is unthinkable apart from the moment and the moment is a kind of middle point uniting as it does in itself both a beginning of future time and an end of past time it follows that there must always be time But if this is true of time it is evident that it must also be true of motion time being an attribute of motion

With one exception all his predecessors according to Aristotle are in agreement that time is uncreated In fact he says it is just this that enables Democritus to show that all things cannot have had a becoming Plato alone asserts the creation of time saying that it had a becoming together with the universe But Aristotle s own arguments for the eternity of time and motion do not seem to Aquinas to be absolutely demonstrative but only relatively so—*vi* as against the arguments of some of the ancients who asserted that the world began to be in some actually impossible ways As for the present moment or the *now* of time always requiring something which comes *before* as well as *after* Aquinas admits that time cannot be made except according to some *now* yet not because there is time in the first *now* but because from it time begins

The position of Aquinas that arguments for the initiation or the endlessness of time are only dialectical seems to be confirmed by Kant In the Transcendental Dialectic of the *Critique of Pure Reason* Kant sets forth as one of the cosmological antinomies the opposed arguments for the beginning of the world and for a world without beginning The reasoning on either side being equal in its *appearance* of cogency nei

ther conclusion according to Kant is genuinely demonstrated

But those who like Newton and Locke separate absolute time or infinite duration from the existence of a world in motion seem to be unaffected by arguments which concern only the time of the material world the time that is relative to motion For them absolute or infinite time is eternity It may be empty of motion but it is filled with God s everlasting being Though we make duration boundless as certainly it is Locke writes we cannot yet extend it beyond all being God every one easily allows fills eternity God is not eternity says Newton but He is eternal His duration reaches from eternity to eternity He endures forever and is everywhere present and by existing always and everywhere He constitutes duration and space

The issue is again brought into focus by the denial that God s eternity can be identified with infinite or absolute time Even supposing that the world always was Aquinas writes it would not be eternal in the sense in which God is for the divine being is all being simultaneously without succession He distinguishes the *now* that stands still as the eternal present from the continually shifting *now* in the flow of time s passing moments For him God s everlasting being does not endure through endless time but rather exists unchanging in the eternal present As eternity is the proper measure of being so time is the proper measure of movement and hence Aquinas writes according as any being recedes from permanence in being and is subject to change it recedes from eternity and is subject to time

THE TWO MEANINGS OF eternity—infinite time and utter timelessness—are discussed in the chapter on ETERNITY The distinction between time and eternity which is considered both there and here seems to be understood differently by those who contrast timelessness with temporality and by those who equate eternity with endless time For the latter the point of difference between eternity and time seems to be only one of infinite as opposed to limited duration Yet as we have just observed writers like Newton and Locke also distinguish absolute or infinite time (which they tend to identify with eternity) from definite periods or limited spans of time by making the one independent of the other relative to and measured by motion

The question remains whether absolute time is real time or only a mathematical abstraction whether it exists apart from perceived time—the experienced duration of observable motions or the elapsed time of events in succession

Considering this question Kant says that those who maintain the absolute reality of time and space whether as essentially subsisting or only inhering as modifications in things must find themselves at utter variance with the principles of experience itself For if they decide for the first view and make space and time into substances this being the side taken by mathematical natural philosophers they must admit two self subsisting nonentities infinite and eternal which exist (yet without their being anything real) for the purpose of containing in themselves everything that is real If they adopt the second view of inherence which is preferred by some metaphysical natural philosophers and regard space and time as relations abstracted from experience they find themselves in that case necessitated to deny the validity of mathematical doctrine *a priori* in reference to real things

On Kant s own view the synthetic judgments of mathematics can have the apodictic certainty of *a priori* propositions only if space and time are themselves *a priori* forms of intuition As the *a priori* form of space makes possible the pure science of geometry according to Kant so the *a priori* form of time makes possible the pure science of numbers *i e* arithmetic But whereas space as the pure form of external intuition is limited to external phenomena alone time as the form of the internal sense is for Kant the formal condition *a priori* of all phenomena whatsoever

Without sharing Kant s theory of *a priori* forms of intuition or of the foundations of pure mathematics other writers appear to agree to some extent with his denial of independent reality to time Aristotle raises the question whether if soul did not exist time would exist or not He thinks the question may be fairly asked because if there cannot be someone to count there cannot be anything that can be

counted so that evidently there cannot be *number* —*for number* is the counted or the countable But if nothing but soul or *in soul* reason is qualified to count there would not be time unless there were soul Yet Aristotle qualifies this somewhat by adding that *if mo e- ment* can exist without soul and the before and after are attributes of movement time may exist as these *qua* numerable

Augustine takes a less qualified position Ask *ing* v hat it is that time is the extendedness of he answers Probably of the mind itself *Insisting* that neither future nor past time can be *m asured* because neither exists Augustine *concludes* that it is only passing time we can *measure* and that we can measure it only in the *mind* It is in you O my mind he says that I *measure time* What I measure is the im press *produced* in you by things as they pass and abiding in you when *they* have passed I do not measure the things *themselves* whose passage produced the *impress* it *is* the impress that I measure when I measure *time*

Yet William James while *giving a similar* analysis of our experience of time insists that *time is objective* as well as subjective Time and space relations he writes *are* impressed from without The time and space in which the objects of our *thought exist* exist as inde pendently of the mind as *do those objects* them selves *The time- and space-relations between things do stamp copies within* as for example when things sequent in time impress *their* se quence on our memory

WILLIA I JAMES PROPOSES a solution of the *mys* tery of how time exists—at least how *it exists* in experience So far as our experience *goes* past and future can exist only in the present But how *can these* extended parts of time exist in the present if *the present is* but a fleet ing moment without any *extent of duration* gone as James says *in the instant* of be coming ? *His answer is in* terms of something he calls the *specious present*

Unlike the real *present* the *spe ious* present is no knife edge but a saddle back *with* a cer tain l readth of its own on which we *sit perched* and from wh ch we look in two directions into *time* Th unit of composition of our percep tion of *time is a d ration* with a bow and a stern as it were—a rearward and a forward-looking end It is only as parts of this *duration-block* that the relation of *succession* of one end to the other *is perceived*

On the basis of some experimental evidence James *estimates* that the specious present may vary in length from a few *seconds* to probably not more than a minute It has a vaguely vanishing backward and forward fringe but its nucleus is probably the dozen seconds or less that have just elapsed

The irreversible flow of time—the succession of moments which constitute the motion of the future through the present into the past—occurs in the specious present though not accord ing to James without the accompaniment of observed or experienced change Awareness of *change* is the condition on which our per ception of time s flow depends But that awareness must take place in the specious pres ent with its content perceived as having one part earlier and the other part later In conse quence James considers the specious present to be not only the original intuition of time but also *the original paragon prototype of all concei ed times*

THE PROBLEMS OF TIME its own process and being as well as its relation to all other existence and change its character as an aspect of ex perience and as an object of thought seem to belong to many subject matters—to psychology and to experimental or mathematical physics, to the philosophy of nature metaphysics and theology

For some thinkers—in our own time notably Bergson Whitehead and Dewey—the concep *of time* of the burgeoning future of the con tinuum of events seems to determine a whole philosophical outlook If it is not equally de cisive throughout the tradition of the great books it is at least of critical significance in speculations about the origin and end of the world in the contrast between physical and spiritual modes of being in the consideration of the processes of life thought and feel ng and in the analysis of more inclusive concepts such as that of order

The temporal relat onships of succession and simultaneity for example may be the s urce from which we derive the notions of prior pos

terior and simultaneous but they are traditionally viewed as exemplifying rather than exhausting these types of order When Augustine deals with the perplexing theological question of the priority of eternity to time he finds it necessary to distinguish priority in eternity priority in time priority in choice priority in origin

When Aristotle deals with metaphysical questions concerning the order of cause and effect of potentiality and actuality of essence and accident he differentiates between temporal and logical priority and between priority in thought and priority in nature When Harvey tries to solve the familiar biological riddle (which came first the chicken or the egg?) he also finds his solution in a distinction The fowl is prior by nature he writes but the egg is prior in time

Space and spatial relationships no less than time and the temporal figure in the general analysis of order or relatedness and have a bearing on other problems in physics and philosophy But in addition to time s having more significance than space for the theologian time also has peculiar importance for one subject matter in which space is of much less concern namely history and the philosophy of history

Besides the general view which the historian takes of time as the locus of history or the medium in which the pattern of history unfolds the writer of history usually employs certain conventional time divisions to mark the major phases or epochs of the story he has to tell Clocks and calendars record or represent the passage of time in conventional units but these conventions have some natural basis in astronomical time solar or sidereal In contrast the distinction between historic and prehistoric time or the division of history into such periods as ancient mediaeval and modern seems to be purely a matter of social or cultural convention

With Hegel however the division of the whole of history into three epochs and of each epoch again into three period follows from the dialectical triad of thesis antithesis and synthesis which is the underlying form of history s development The divisions of each of the three phases of world history—the Oriental the Graeco Roman and the German worlds—into a first second and third period produces in each case the same pattern of origin conflict and resolution For the most part Hegel does not identify these three periods with ancient mediaeval and modern times yet in one case that of the German world he does refer to the second period as the middle ages and the third as the modern time

Such words as ancient and modern have conventional significance for most historians Furthermore the meanings of modernity and antiquity are themselves subject to historical relativity In the tradition of the great books this appears most plainly in the references made to ancients and moderns by writers whom we today classify as ancient and mediaeval

Thucydides for example begins his history with a description of what is for him the antiquity of Greece Nicomachus opens his *Introduction to Arithmetic* with a remark about the ancients who under the leadership of Pythagoras first made science systematic defined philosophy as the love of wisdom Mathematics Aristotle says has come to be identical with philosophy for modern thinkers

In another place Aristotle contrasts the thinkers of the present day with the thinkers of old and in still another he speaks of ancient and truly traditional theories Like Aristotle in the sphere of thought so Tacitus in the sphere of politics frequently compares ancient and modern institutions or practices

In the Middle Ages Aquinas speaks of the teachings of the early philosophers and as frequently as Aristotle he refers to ancient and modern doctrines In the Renaissance Kepler treats as ancient a scientist who in point of time comes much later than those whom Aristotle and Aquinas call modern Classifying three schools of astronomical thought he distinguishes an ancient one which had Ptolemy as its coryphaeus from two modern ones respectively headed by Copernicus and Tycho Brahe

Such references which have occurred in all three periods of the western tradition suggest the probability that at some future date the whole tradition with which we are now acquainted will be referred to as the thought and culture of ancient times

Chapter 94 TRUTH

INTRODUCTION

NOT everyone knows Josiah Royce s definition of a liar as a man who willfully misplaces his ontological predicates but every one who has ever told a lie will recognize its accuracy To restate the definition less elegantly lying consists in saying the contrary of what one thinks or believes To speak truthfully we must make our speech conform to our thought we must say that something is the case if we think it is or that it is not if we think it is not If we deliberately say is when we think *is not* or say is not when we think *is* we lie

Of course the man who speaks truthfully may in fact say what is false just as the man whose intent is to falsify may inadvertently speak the truth The intention to speak one s mind does not guarantee that one s mind is free from error or in possession of the truth Herein lies the traditional d stinction between truth as a social and as an intellectual matter What Dr Johnson calls *moral* truth consists in the obligation to say what we mean In contrast what he calls *physical* truth depends not on the veracity of what we say but on the validity of what we mean

The theory of truth in the tradition of the great books deals largely with the latter kind of truth The great issues concern whether we can know the truth and how we can ever tell whether something is true or false Though the philosophers and scientists from Plato to Freud seem to stand together against the extreme sophistry or skepticism which denies the distinction between true and false or puts truth utterly beyond the reach of man they do not all agree on the extent to which truth is attainable by men on its immutability or variab lity on the s gns by which men tell whether they have the truth or not or on the causes of error and the means for avoiding falsity

Much that Plato thinks is true Freud rejects as false Freud searches for truth in other quarters and by other methods But the ancient controversy in which Socrates engages with the sophists of his day who were willing to regard as true whatever anyone wished to think seems to differ not at all from Freud s quarrel with those whom he calls intellectual nihilists They are the persons who say there is no such thing as truth or that it is only the product of our own needs and desires They make it absolutely immaterial Freud writes what views we accept All of them are equally true and false And no one has a right to accuse any one else of error

Across the centuries the arguments against the skeptic seem to be the same If the skeptic does not mind contradicting himself when he tries to defend the truth of the proposit on that all propositions are equally true or false he can perhaps be challenged by the fact that he does not act according to his view If all opinions are equally true or false then why Aristotle asks does not the denier of truth walk into a well or over a precipice instead of avoiding such things If it were really a matter of indifference what we believed Freud similarly argues then we might just as well build our bridges of cardboard as of stone or inject a tenth of a gramme of morphia into a patient instead of a hundredth or take tear gas as a narcotic instead of ether But he adds the intellectual anarchists themselves would strongly repud ate such practical appl cations of their theory

Whether the skeptic can be refuted or merely silenced may depend on a further step in the argument in which the skeptic substitutes probabil ty for truth both as a basis for action and as the quality of all our op n ons about the real world The argument takes differ nt forms accord ng to the different ways in which probability is d tingu hed from truth or according

to the distinction between a complete and limited skepticism Montaigne for example seems to think that the complete skeptic cannot even acknowledge degrees of probability to be objectively ascertainable without admitting the criterion of truth whereas Hume defending a mitigated skepticism offers criteria for measuring the probability of judgments about matters of fact

THE POSITION OF THE skeptic in its bearing on truth and probability is discussed in the chapters on KNOWLEDGE and OPINION Here we shall proceed to other controversial questions concerning truth But we must first observe that there is one major question which does not seem to cause much dispute Not only do the great authors (with the possible exception of Montaigne and Hume) seem to be unanimous in their conviction that men can attain and share the truth—at least some truths—but they also appear to give the same answer to the question What is truth?

The apparently unanimous agreement on the nature of truth may seem remarkable in the context of the manifold disagreements in the great books concerning what is true As already indicated some of these disagreements occur in the theory of truth itself—in divergent analyses of the sources of error or in conflicting formulations of the signs of truth But even these differences do not affect the agreement on the nature of truth Just as everyone knows what a liar is but not as readily whether someone is telling a lie so the great philosophers seem able to agree on what truth is but not as readily on what is true That the definitions—of lying and of truth—are intimately connected will be seen from Plato s conception of the nature of truth as a correspondence between thought and reality If truthfulness viewed socially requires a man s words to be a faithful representation of his mind truth in the mind itself (or in the statements which express thought) depends on their conformity to reality

A false proposition according to Plato is one which asserts the non existence of things which are and the existence of things which are not Since false opinion is that form of opinion which thinks the opposite of the truth it necessarily follows as Aristotle points out that to say of what is that it is and of what is not that it is not is true just as it is false to say of what is that it is not or of what is not that it is

In one sense the relation between a true statement and the fact it states is reciprocal If a man is Aristotle declares then the proposition in which we allege that he is, is true and conversely if the proposition wherein we allege that he is is true then he is But the true proposition is in no way the cause of the being of the man whereas the fact of the man s being does seem somehow to be the cause of the truth of the proposition for the truth or falsity of the proposition depends on the fact of the man s being or not being

THIS SIMPLE STATEMENT about the nature of truth is repeated again and again in the subsequent tradition of western thought What variation there is from writer to writer seems to be in phrasing alone though the common insight concerning truth as an agreement or correspondence between the mind and reality may occur in the context of widely varying conceptions concerning the nature of the mind and of reality or being

Plotinus may be an exception insofar as his theory of knowledge involves a relation of identity rather than of mere correspondence The object known he writes must be identical with the knowing act If this identity does not exist neither does truth Truth cannot apply to something conflicting with itself what it affirms it must also be

But others like Augustine Aquinas Descartes and Spinoza adopt the conception of truth as an agreement between the mind and reality Falsehood occurs says Augustine when something is thought to be which is not According to Aquinas any intellect which understands a thing to be otherwise than it is is false Truth in the human intellect consists in the conformity of the intellect with the thing The same point is implied at least in Descartes remark that if we do not relate our ideas to anything beyond themselves they cannot properly speaking be false Error or for that matter truth can only arise in my judging that the ideas which are in me are similar or conformable to the things which are out

side me Spinoza states it as an axiom rather than a definition that a true idea must agree with that of which it is the idea

Making a distinction between verbal and real truth Locke writes Though our words signify nothing but our ideas yet being designed by them to signify things the truth they contain when put into propositions will be only verbal when they stand for ideas in the mind that have not an agreement with the reality of things Precisely because he considers truth to consist in the accordance of a cognition with its object Kant holds that so far as the content (as opposed to the form) of a cognition is concerned it is impossible to discover a universal criterion of truth

We shall return to Kant s point in a subsequent discussion of the signs of truth as also we shall have occasion to return to Locke s distinction between real and verbal truth Neither affects the insight that truth consists in the agreement of our propositions or judgments with the facts they attempt to state unless it is the qualification that truth so defined is real not verbal

In his Preface to *The Meaning of Truth* James comments on the excitement caused by his earlier lectures on pragmatism in which offering the pragmatist s conception of truth he had spoken of an idea s working successfully as the sign of its truth He warns his critics that this is not a new definition of the nature of truth but only a new interpretation of what it means to say that the truth of our ideas consists in their agreement as falsity means their disagreement with reality Pragmatists and intellectualists he adds both accept this definition as a matter of course

To agree in the widest sense with reality James then explains can only mean to be guided either straight up to it or into its surroundings or to be put into such working touch with it as to handle either it or something connected with it better than if we disagreed Better either intellectually or practically Any idea that helps us to deal whether practically or intellectually with either the reality or its belongings that *fits* in fact and adapts our life to the reality s whole setting will agree sufficiently to meet the requirement It will be true of that reality

Without enlarging on its meaning as James does Freud affirms that the ordinary man s conception of truth is that of the scientist also Science he says aims to arrive at correspondence with reality that is to say with what exists outside of us and independently of us This correspondence with the real external world we call truth It is the aim of scientific work even when the practical value of that work does not interest us

THE DEFINITION OF TRUTH as the agreement of the mind with reality leaves many problems to be solved and further explanations to be given by those who accept it As James indicates the theory of truth begins rather than ends with its definition How do we know when our ideas—our statements or judgments—correspond with reality? By what signs or criteria shall we discover their truth or falsity? To this question the great books give various answers which we shall presently consider There are other problems about the nature of truth which deserve attention first

For example one consequence of the definition seems to be that truth is a property of ideas rather than of things Aristotle says that it is not as if the good were true and the bad were in itself false hence falsity and truth are not in things but in thought Yet he also applies the word false to non existent things or to things whose appearance somehow belies their nature Aquinas goes further He distinguishes between the sense in which truth and falsity are primarily in the intellect and secondarily in things

The equation between intellect and thing he points out can be looked at in two ways depending on whether the intellect is the cause of the thing s nature or the nature of the thing is the cause of knowledge in the intellect When things are the measure and rule of the intellect truth consists in the equation of the intellect to the thing But when the intellect is the rule or measure of things truth consists in the equation of things to the intellect —as the product of human art may be said to be true when it accords with the artist s plan or intention Thus a house is said to be true that fulfills the likeness of the form in the architect s mind

But according to Aquinas not only artificial things but natural things as well can have truth when they are viewed in relation to the intellect on which they depend The divine intellect which is the creative cause of natural things measures their truth as the human intellect measures the truth of artificial things Natural things are said to be true Aquinas writes in so far as they express the likeness of the ideas that are in the divine mind for a stone is called true which possesses the nature proper to a stone according to the preconception in the divine intellect

Aquinas conclusion—that truth resides primarily in the intellect and secondarily in things according as they are related to the intellect as their source —at once suggests the profound difference between truth in the divine and in the human intellect The difference is more than that between infinite and finite truth The distinction between uncreated and created truth affects the definition of truth itself

The definition of truth as an equation of *thought to thing or thing to thought does not* seem to hold for the divine intellect The notion of conformity with its source Aquinas acknowledges cannot be said properly speaking of divine truth Divine truth has no *source It is not truth by correspondence* with anything else Rather it is in the language of the theologian the primal truth God Himself Who is the primal truth is the rule of all truth and the principle and source of all truth

In the human sphere the definition of truth seems to be differently interpreted according as truth is made a property of words or of ideas

To form a clear notion of truth Locke writes it is very necessary to consider truth of thought and truth of words distinctly from one another The truth of signs or what is sometimes called truth of signification is nothing *but the joining or separating of* words in propositions as the ideas they stand for agree or disagree in men s minds In contrast to such verbal truth what Locke calls mental truth consists in the joining or separating of our ideas themselves in a manner to accord with the realities they represent

For Locke verbal truth is chimerical or barely nominal because it can exist without any regard to whether our ideas are such as really have or are capable of having an existence in nature The signs we use may truly represent our thought even though what we think or state in words is false in fact Hobbes takes a somewhat contrary view *True* and *false* he writes are attributes of speech not of things And where speech is not there is neither truth nor falsehood

What is the cause of truth in speech? Hobbes replies that since it consists in the right ordering of names in our affirmations a man needs only to remember what every name he uses stands for If men begin with definitions or the settling of significations and then abide by their definitions in subsequent discourse their discourse will have truth From want of definitions or from wrong definitions arise all false and senseless tenets

Agreement with reality would seem to be the measure of truth for Hobbes only to the extent that definitions can be right or wrong by ref*erence to the objects defined* If definitions themselves are merely nominal and have rightness so far as they may be free from contradiction then truth tends to become more than a property of speech almost purely logistical—a matter of playing the game of words according to the rules Reasoning is reckoning with words It begins with definitions and if it proceeds rightly it produces general eternal and immutable truth For he that reasoneth aright in words he understandeth can never conclude in error

Hobbes position seems to have a bearing not only on the issue concerning verbal and real truth but also on the question whether the logical validity of reasoning makes the conclusion it reaches true as a matter of fact Some writers like Kant distinguish between the truth which a proposition has when it conforms to the rules of thought and the truth it has when it represents nature Valid reasoning alone cannot guarantee that a conclusion is true in fact That depends on the truth of the premises—upon their being true of the nature of things Aristotle criticizes those who accepting certain principles as true are ready to accept any consequence of their application

As though some principles he continues did not require to be judged from their results and particularly from their final issue And that issue in the knowledge of nature is the unimpeachable evidence of the senses as to each fact

BUT NOT ALL TRUTH may require or admit of such certification The truths of mathematics may be different from those of physics or meta physics and those of philosophy or religion from those of the empirical natural sciences It is sometimes supposed for example that the truths of mathematics are purely formal or without reference to real existence That seems to be the position of Hobbes and Hume both of whom take geometry as the model of truth For them statements of fact about real existence are at best probable op n ons For others like James there can be truth in the natural sciences but such empirical truth is distinct in type from what he calls the necessary or *a priori* truths of mathematics and logic

Does the definition of truth as agreement with reality apply to all kinds of truth, or only to truths about the realm of nature? The ques tion has in mind more than the distinction be tween mathematics and physics It is concerned with the difference between the study of na ture and the moral sciences or between the theoretic and the practical discipl nes As re gards nature writes Kant experience pre sents us with rules and is the source of truth but not so in ethical matters or morality A theoretic proposition asserts that something ex ists or has a certain property and so its truth depends on the existence of the thing or its real possession of an attr bute but a practical or moral judgment states not what is but what should occur or ought to be Such a judgment cannot be true by correspondence with the way things are Its truth according to Aristotle must consist rather in agreement with r ght desire

On this theory all that remains common to speculative and practical truth is the conform ity of the intellect to something outside itself—to an existing thing or to desire will or appe tite Stress ng the difference Aquinas declares that truth s not the same for the practical as for the speculative intellect The conformity with right appetite upon which practical truth depends he goes on to say has no place in necessary matters which are not effected by the human will but only in contingent matters which can be effected by us whether they be matters of interior action or the products of external work In consequence in matters of action truth or practical rectitude is not the same for all as to what is particular but only as to the common principles whereas in specu lative matters concerned chiefly with neces sary things truth is the same for all men both as to principles and as to conclusions

THE PROBLEM OF THE criteria or signs of truth does not seem to be of equal concern to all who discuss the nature of truth For the ancients at one extreme it seems to be hardly a problem at all For William James at the other extreme it seems to be the central problem In the contro versy over the pragmatic theory of truth in which James engages with Bradley and Russell some confusion tends to result from the fact that James seldom discusses what truth is except in terms of how we know what is true while his opponents often ignore the signs of truth in d scussing its nature The important point for James is not that truth consists in agreement with reality but that true ideas are those we can ass milate validate corroborate and veri fy Whether we can assimilate or validate or verify an idea in turn depends upon its conse quences either for thought or action or what James calls truth s cash value in experiential terms

In his *Psychology* James suggests another aspect of his theory of the expediency of a true idea which he later developed in *Pragmatism* Not only must our conceptions or theories be able to account satisfactor ly for our sensible experience but they ar also to be weighed for th ir appeal to our aesthetic emotional and active needs Apart from this added criterion wh ch became the subject of much d spute the pragmatic theory of truth represents one of the tradit onal solutions of the problem of how to tell whether something is true or false It looks ma nly to extrins c signs—not to som feature of the idea or thought itself but to its conse quences

'The test of real and vigorous thinking

writes J S Mill the thinking which ascertains truths instead of dreaming is successful application to practice In similar vein Bacon says that of all the signs there is none more certain or worthy than that of the fruits produced for the fruits and effects are the sureties and vouchers as it were for the truth of philosophy The man who supposes that the end of learning lies in contemplation of the truth will propose to himself as the test of truth the satisfaction of his mind and understanding as to the causes of things long since known Only those who recognize that the real and legitimate goal of the sciences is the endowment of *human life with new inventions and riches* will submit truth to the test of its leading to some new earnest of effects To take effects as pledges of truth is for Bacon equivalent to declaring that truth and utility are perfectly identical

Verification by appeal to observation or sensible evidences may be regarded as one way of testing the truth of thought in terms of its consequences but it also involves the *principle of* contradiction as a criterion of truth When Aristotle recommends for example that we should accept theories as true only if what they affirm agrees with the observed facts he is saying that when the truth of a particular perception is indisputable because the observed fact is evident the general or theoretical statement which it contradicts must be false

But the principle of contradiction as a criterion of truth goes further than testing theories by their consistency with observation One of two contradictory statements must be false and the other must be true if that which it is true to affirm is nothing other than that which it is false to deny Even a single statement may show itself false by being self contradictory and in consequence its opposite can be seen to be true What Aristotle calls axioms or self evident and indisputable truths are those propositions immediately known to be true and necessarily true because their contradictories being self contradicatory are impossible statements or necessarily false The truth of any proposition which is neither a self evident axiom nor the statement of an evident perceived fact is tested according to the principle of contradiction by its consistency with axioms or perceptions

As opposed to consequences or effects contradiction or consistency as a sign of truth seems to be an intrinsic criterion But this criterion is not universally accepted Contradiction writes Pascal is not a sign of falsity *nor the want of contradiction a sign of truth.* Nor even when accepted is it always judged adequate to solve the problem It is for Kant a merely logical criterion of truth the *conditio sine qua non* or negative condition of all truth Farther than this logic cannot go and the error which depends not on the form but on the content of the cognition it has no test to discover

Some thinkers seem to rely upon an intrinsic mark by which each idea reveals its own truth or falsity Augustine for example considers by what criterion he would know whether what Moses said was true And if I did know it he asks would it be from him that I knew it? No he replies but within me in the inner retreat of my mind the Truth which is neither Hebrew nor Greek nor Latin nor Barbarian would tell me *without lips or tongue or sounded* syllables He speaks truth

For Augustine God is the warranty of the inner voice which plainly signifies the truth. For Spinoza the truth of an idea depends upon its relation to God Because a true idea in us is that which in God is adequate in so far as He is manifested by the nature of the human mind it follows according to Spinoza that he who has a true idea knows at the same time that he has a true idea nor can he doubt the truth of the thing for he who knows a thing truly must at the same time have an adequate idea or a true knowledge of his knowledge tha is to say (as is self evident) he must be certain

It is impossible Spinoza maintains to have a true idea without at the same time knowing that it is true To the question How can a man know that he has an idea which agrees with that of which it is the idea? *he replies that* he knows it simply because he has an idea which agrees with that of which it is the idea that is to say because truth is its own standard For what can be clearer Spinoza asks or more certain than a true idea as the standard of truth? Just as light reveals both itself and the darkness, so truth is the standard of itself and of the false

Spinoza defines an adequate idea as one which in so far as it is considered in itself without reference to the object has all the properties or internal signs of a true idea He explains moreover that by internal he means to exclude even the agreement of the idea with its object This he thinks meets the objection that if a true idea is distinguished from a false idea only in so far as it is said to a ree with that of which it is the idea the true idea [would have] no reality or perfection above the false idea (since they are distinguished by an external sign alone) and consequently the man who has true ideas will have no greater reality or perfection than he who has false ideas only

Although Descartes and Locke also employ an intrinsic criterion of truth—not the adequacy but the clarity and distinctness of ideas—they do not seem to mean as Spinoza does that a single idea in and of itself can be true or false Like Aristotle before them or Kant later they regard a simple idea or concept as str ctly speaking incapable of being either true or false

Truth and falsity writes Locke belong only to propositions —to affirmations or denials which involve at least two ideas or as Kant says truth and error are only to be found in a judgement which explains why the senses do not err not because they always judge correctly but because *they do not judge at all*

Nevertheless for Locke the clarity and distinctness of the ideas which enter into the formation of proposit ons enable the mind to judge intuitively and certainly of their truth When ideas are clear and distinct the mind perceives the ag e ment or disagreement of two ideas immed ately by themselves Such kind of truths the mind perceives at the first sight of the deas together by bare intuition and this kind of kno vledge is the clearest and most certain that human frailty is capable of

THE PROBLEM OF the criterion of truth is sometimes closely connected with the problem of the causes of error Descartes seems to pass by natural steps from one to the other Having decided that the things which we conceive very clearly and distinctly are all true he reminds himself that there may be some difficulty in ascertaining which are those that we distinctly conceive The mystery of error looms large for Descartes because it seems to him that the human intellect being created by God must have a kind of natural infallibility the infallibility of an instrument designed by God for knowing the truth not for ignorance or error

If we did not know Descartes reflects that all that is in us of reality and truth proceeds from a perfect and infinite being however clear and distinct were our ideas we should not have any reason to assure ourselves that they had the perfection of being true But once we have recognized that there is a God and also recognized that all things depend upon Him and that He is not a deceiver we can infer that whatever we perceive clearly and distinctly cannot fail to be true

What then is the source of our errors? I answer writes Descartes that they depend on a combination of two causes to wit on the faculty of knowledge that rests in me and on th power of choice or free will Each perfect in its own sphere neither the will nor the understanding by itself causes us to fall into error Since I understand nothing but by the power which God has given me for understanding there is no doubt Descartes declares that all that I und rstand I understand as I ought and it is not possible that I err in this

The trouble lies in the relation of the will to the intellect Since the will is much wider in its range and compass than the understanding I do not restrain it within the same bounds but extend it also to things which I do not understand It is not God s fault says Descartes if in the exercise of my freedom I do not withold my assent from certain things as to which He has not placed a clear and distinct knowledge in my understanding But as long as I so restrain my will within the limits of knowledge that it forms no judgment except on matters which are clearly and distinctly represented to it by the understanding I can never be deceived

There are other accounts of er or less elaborate than Descartes which a e s milar to the extent that they place the cau e n so ne combination of human faculties rath r th n in their simple and separat oper tion Socrates explains to Theaetetus that false opinions arise when the

senses and the mind do not cooperate properly Aristotle suggests that it is the imagination which frequently misleads the mind Looking at the problem from the point of view of the theologian Aquinas holds that Adam in his state of innocence before the fall could not be deceived While the soul remained subject to God he writes the lower powers in man were subject to the higher and were no impediment to their action But man born in sin can be deceived not because the intellect itself ever fails but as a result of the wayward influence of some lower power such as the imagination or the like

Lucretius for whom sense not mind is infallible attributes error to the fault of reason which misinterprets the veridical impressions of the senses What surer test can we have than the senses he asks whereby to note truth and falsehood? He explains that the mind not the senses is responsible for illusions and hallucinations Do not then fasten upon the eyes this frailty of the mind

Other writers like Descartes take the opposite view that the senses are much less trustworthy than the intellect Still others like Montaigne seem to find that error and fallacy rather than any sort of infallibility are quite natural to all human faculties and beset sense and reason alike Man says Pascal is full of error natural and ineffaceable without grace Nothing shows him the truth Everything deceives him Those two sources of truth reason and the senses besides being both wanting in sincerity deceive each other in turn

Considering the extremes to which men have gone in their appraisal of human prowess or frailty Locke s moderate statement of the matter is worth pondering Notwithstanding the great noise made in the world about errors and opinions he writes I must do mankind that right as to say there are not so many men in errors and wrong opinions as is commonly supposed Not that I think they embrace the truth but indeed because concerning these doctrines they keep such a stir about they have no thought no opinion at all And though one cannot say that there are fewer improbable or erroneous opinions in the world than there are yet this is certain there are fewer that actually assent to them and mistake them for truths than is imagined

OUTLINE OF TOPICS

REFERENCES

To find the passages cited u e the numbers in heavy type vh ch are the volume and page numbers of the pas ges referred to For example in **4** Homer *Iliad* BK II [265 283] **12d**, the number **4** is the number of the volume in the set the number **12d** ind cates that the pas sage is in section d of page 12

Page Sections When the text is printed in one column the letters **a** and **b** refer to the upper and lower halves of the page For example in **53** James *Psychology* **116a 119b** th passage begins in the upper half of pa e 16 and ends in the lov er half of page 119 When the text is printed in two columns the letters **a** and **b** refer to the upper and lo er halves of the left hand side of the page the letters **c** and **d** to the upper and lower halves of the ri ht hand s de of the page For example in **7** Plato *Symposium* **163b-164c** the passage begins in the lo er half of the left hand side of page 163 and ends in the upper half of the right hand s de of pa e 164

Author s Divisions One or more of the main divisions of a work (such as PART BK CI s CT) are sometim s included in the ref ence line numbers in brackets are gi en in cer ta n cases *e g* *Iliad* BK II [265 283] **12d**

Bible References The references are to book chapter and verse When the King James and Douay versions differ in title of books or in the numbering of chapters or verses the King James vers on is cited first and the Douay indicated by a *(D)* follows *e g* Old Testa m nt *Nehemiah* 7 45—*(D) II Esdras* 7 46

Symbols The abbreviation esp calls the reader s attention to one or more especially relevant parts of a whole reference pass m signifies that the topic is discussed intermit tently rather than continuou ly in the work or passage cited

Chapter 95 TYRANNY

INTRODUCTION

IF any point in political theory is indisputable it would seem to be that tyranny is the worst corruption of government—a vicious misuse of power and a violent abuse of the human beings who are subject to it Aristotle's remark that no freeman if he can escape from it will endure such government would seem to express the sentiments of all who loving liberty and abhoring slavery look upon tyranny as destroying the one and establishing the other

Certainly the word tyranny is seldom if ever used eulogistically Such phrases as a just tyranny or a good tyrant are at once seen to be as self contradictory as a round square The great books of history give the impression that tyrants and despots who vastly outnumber good rulers are always objects of hate and fear never of love and admiration If there are exceptions if there are peoples who willingly submit to or even deserve the yoke of despotism and tyranny they are in the judgment of ancients and moderns alike politically primitive

The traditional association of the word despotism with tyranny requires us to consider whether our understanding of these terms is as uniformly clear as the denunciation of what they denote seems to be universal Are despotism and tyranny the same? It may be thought that the tyrant must always have despotic power at his disposal power unlimited by law so that the lawless ruler is at once both despot and tyrant But need the despot the absolute ruler always rule tyrannically?

The familiar phrase benevolent despotism at once suggests the negative answer and also some line of distinction between despotism and tyranny Tyranny can never be benevolent But despotism may be no worse than paternalism While its injustice may consist in treating adults able to govern themselves as if they were children it may also derive an air of justice from the fact that the despot like the father rules his subjects for their own good If he treats them like slaves rather than children exploiting them to serve his own interests then he is not a benevolent but a tyrannical despot

This understanding of the meaning of despotism and tyranny seems to be only partly supported by their etymology The Greek word from which despot comes signifies the head of a household the *paterfamilias* (as he is called by the Romans) who exercises the absolute authority of a master over chattel slaves and of a parent over his children. In contrast the Greek word *tyrannos* refers to the ruler of a state rather than a family and is sometimes used as if it were equivalent in meaning to king Yet both words carry the connotation of absolute power and when in addition the subjects of a tyrant are considered to be no better off than slaves the difference in the meaning of the two words almost disappears

The difficulty of grasping what is essential to the nature of tyranny and despotism seems to be complicated by certain criteria originally proposed by the Greeks for distinguishing between king and tyrant or between royal and despotic rule Both Plato and Aristotle speak of the king as a good monarch and the tyrant as a bad one Both say that monarchy or rule by a single man is royal when it is for the welfare of the ruled and tyrannical when it serves only the interests of the ruler Both make lawlessness—either a violation of existing laws or government by personal fiat without settled laws—a mark of tyranny

Yet for Aristotle at least some of these criteria also apply to despotism and even to royal government insofar as these are distinguished from political or constitutional government—government by law rather than by men Furthermore the association of either tyranny or

despotism with monarchy—rule by *one* man whether just or unjust—seems to be counterbalanced by Aristotle s discussion of the tyranny of the *few* and of the *many* In a monarchy the king can turn tyrant but so can the wealthy become despotic in an oligarchy or the poor in a lawless democracy

The nature of tyranny thus seems to be more difficult to define precisely than would at first appear from the almost universal condemnation of it as the worst perversion of government

To some extent the difficulties may be verbal The word tyranny is used with many meanings not only by the Greeks but throughout the tradition of the great books Some writers identify tyranny and despotism some distinguish the two sharply Some writers consider tyranny and despotism only in connection with monarchy some extend the consideration to other forms of government The words are sometimes used descriptively without the connotation of good or evil and sometimes they are more derogatory than descriptive

Even when the necessary verbal clarifications are achieved genuine issues still remain Conflicting accounts are given of the causes of tyranny or the circumstances from which it develops Concerning despotism some writers take the position that it may be justified by conquest or by the need of a people for absolute government or in the form of a temporary dictatorship by emergency conditions Not even the condemnation of tyranny seems to be unanimous if the views of Hobbes are to be reckoned with nor among those who condemn tyranny is the fairly general approval of tyrannicide free from the strong dissenting voice of Kant

THE FOREGOING INDICATES how the notions of tyranny and despotism are involved in other chapters dealing with the various forms of government and in addition such chapters as JUSTICE LIBERTY and SLAVERY The distinction for example between domestic and political slavery bears on one of the ways in which despotism and tyranny are distinguished and the discussion in the chapters on MONARCHY and CONSTITUTION concerning absolute and limited government raises a question which must also be considered here namely whether absolute monarchy can be distinguished from despotism and whether it has an inveterate tendency to become tyrannical

That question deserves immediate attention, because its answers are connected with opposed views of the justice or defensibility of tyranny and despotism Plato and Aristotle for example treat tyranny as the prototype of political injustice and the tyrant as the extreme case of the vicious man yet there are passages which appear to have a contrary tenor In the *Laws* the Athenian Stranger proposes a good tyrant as the best means for establishing the laws To the question What are the conditions which you require in a state before you can organize it? he thinks the legislator s answer should be Give me a state which is governed by a tyrant and let the tyrant be young and have a good memory let him be quick at learning and of a courageous and noble nature —in short let him have temperance and every other virtue

More readily than monarchy, democracy or oligarchy tyranny is the stepping stone to the best state according to the Athenian Stranger because it involves the greatest power concentrated in a single man The combination of virtue and power may rarely be found but he says when the supreme power in man coincides with the greatest wisdom and temperance then the best laws and the best constitution come into being and in no other way

Aristotle s classification of the types of kingship or the forms of royal government seems to include tyranny among them He refers to the kind of monarchy which prevails among the barbarians who being more servile in character than Hellenes do not rebel against a despotic government Such royalties he goes on have the nature of tyrannies because the people are by nature slaves but there is no danger of their being overthrown for they are hereditary and legal Even among the Hellenes in ancient times Aristotle points out there was a form of monarchy or dictatorship that may be defined as an elective tyranny which like the barbarian monarchy is legal but differs from it in not being hereditary

These two forms of tyranny Aristotle says elsewhere are both according to law and therefore easily pass into royalty The line be-

tween king and tyrant is not however as shad owy as might first appear Kings rule accord ing to law over voluntary subjects but tyrants over involuntary and the one are guarded by their fellow citizens the others are guarded a ainst them The forms of monarchy which Aristotle also calls tyrannies seem to him to have a mixed character They are royal he says in so far as the monarch rules according to law over willing subjects but they are ty rannical in so far as he is despotic and rules ac cording to his own fancy But there is also a kind of tyranny which being unmixed is the counterpart of perfect monarchy This tyranny is just that arbitrary power of an individual which is responsible to no one and governs all alike whether equals or better with a view to its own advantage not to that of its subjects and therefore against their will

Aristotle explains his association of tyranny with monarchy on the ground that both are forms of one man rule but he adds there is the greatest difference between them the ty rant looks to his own advantage the king to that of his subjects Tyrannical government is monarchy exercising the rule of a master over political society and therefore deserves to be called despotic as well as tyrannical When it has no admixture of royalty tyranny is not only self serving but lawless rule It is the very reverse of a constitution or rule by law Except for the hypothetical case in which the truly superior the almost god like man is king Aristotle seems to identify abso lute or unconstitutional monarchy with tyr anny and despotism and he condemns both for violating the very nature of the state con ceived as a community of free men

THE LINE BETWEEN KING and tyrant is sim larly drawn by Plato Monarchy for him d v des into royalty and tyranny according as one man rules by law or lawlessly over voluntary or involuntary subjects If the one m n were like a god in relation to other men it would be fitting for him to rule the state by his wisdom or science and without recourse to laws If there could be such a despot the Eleatic Stranger says in the *Statesman* he alone would be the happy ruler of a true and perf ct state but men can never be made to bel eve that any one can be worthy of such authority (History suggests the contrary in such cases as Caesar Napoleon and Hitler)

Giving the name of king to the monarch who abides by and maintains established laws the Stranger gets Socrates to agree that the ruler should be called a tyrant when he gov erns neither by law nor by custom but imitat ing the true man of science pretends that he can only act for the best by violating the laws while in reality appetite and ignorance are the motives of the imitation

In the *Republic* Socrates refers to Euripides praise of tyranny as god like and gives as another reason for excluding the poets from the state the fact that they are the eulogists of tyranny Far from being god like the tyran nical man is described by Socrates as drunken lustful passionate Tyrants are always either the masters or servants and never the friends of anybody the tyrant never tastes of true free dom or friendship Oriental despotism Hegel later writes appears to give freedom to one man but the freedom of that one is only ca price ferocity—brutal recklessness of passion That *one* is therefore only a despot not a *free man*

According to Plato tyranny is not only the greatest evil a state can suffer but the tyrant is also the unhappiest of men Will not he who has been shown to be the wickedest Soc rates ask be also the most miserable? Polus in the *Gorgias* tries to prove that like the succe sful criminal who goes unpunished the tyrant who does injustice to everybody but suffers none achieves more happiness than other men But Socrates taking the position that it is better to suffer than to do injustice argues to the contrary that the tyrant is more miserable than those whom he oppresses

If th s is true the confirmed tyrant is prob ably the m n least able to perceive or acknowl edge it Plutarch reports the story of Plato s first meeting with Dionysius the tyrant of Syra cuse When Plato tried to prove to him that tyrants of all men had the least pretence to virtue and that since they lacked just ce they suffered the miserable condition of the unjust D onysius would not l ear the argu m nt out He asked the ph losopher in a rage Plutarch relates what bus n ss he had in Sic

ily To which Plato answered I come to seek a virtuous man It seems then replied Dionysius you have lost your labor According to Plutarch Dionysius tried to have Plato killed on his return voyage to Greece or failing that to have him sold into slavery He would not be harmed by that Dionysius reasoned because being the same just man as before he would enjoy his happiness though he lost his liberty

ON THE WHOLE THEN Aristotle s and Plato s disapproval of tyrants and tyranny seems to be unequivocal The passages which might cause this to be questioned can perhaps be accounted for by the ancient tendency to use the word tyrant descriptively to denote the possessor of absolute power Yet even in the *Laws* where such usage occurs Plato observes that kings unable to sustain the temptation of arbitrary power tend to overthrow the laws and so become tyrannical in the invidious sense of the word

With the exception of Hobbes mediaeval and modern writers are no less disapproving than the ancients Tyrannical government according to Aquinas is altogether corrupt and completely lawless It is the tyrant himself rather than those who may rebel against a government so lacking in justice who is guilty of sedition since he encourages discord and sedition among his subjects that he may lord over them more securely When a king by becoming a tyrant has dethroned himself and put himself in a state of war with his people what shall hinder them asks Locke from prosecuting him who is no king as they would any other man who has put himself in a state of war with them?

In Locke s view it is a mistake to think that the fault of tyranny is proper only to monarchies For wherever the power that is put in any hands for the government of the people and the preservation of their properties is applied to other ends and made use of to impoverish harass or subdue them to the arbitrary irregular commands of those that have it there it presently becomes tyranny whether those that thus use it are one or many Wherever law ends tyranny begins if the law be transgressed to another s harm

Tyranny is thus defined by Locke as the exercise of power beyond right which nobody can have a right to Such absolute arbitrary power or governing without settled standing laws can neither of them consist with the ends of society and government Tyranny so defined may not be limited to monarchies but according to Locke absolute monarchy is always tyrannical For that very reason it is he writes inconsistent with civil society and so can be no form of civil government at all

What Locke calls tyranny or without change of meaning absolute monarchy Kant calls autocracy But Kant distinguishes the monarch who has the *highest* power from the autocrat who has *all* power Hegel calls despotism that state of affairs where law has disappeared and where the particular will as such whether of a monarch or a mob counts as law or rather takes the place of law The writers of the *Federalist* use the words tyranny and despotism interchangeably but do not vary from the definition which Montesquieu gives of despotic government as that in which a single person directs everything by his own will and caprice In all other governments even in monarchy when it is constitutional the separation of powers puts some limitation on the power entrusted to the offices of state

Following Montesquieu s doctrine Madison declares The accumulation of all powers legislative executive and judiciary in the same hands whether of one a few or many and whether hereditary self appointed or elective may justly be pronounced the very definition of tyranny He reinforces his point by quoting Jefferson s dictum that concentrating all the powers of government in the same hands is precisely the definition of despotic government

HOBBES SEEMS TO BE the one exception in the great books to this variously expressed opinion of the evil of absolute power Locke may have him in mind when he says that absolute monarchy is by some men counted the only government in the world Certainly Hobbes would not repudiate the charge that he thinks none but absolute government feasible nor is he dismayed by the tendency of other writers

to call absolute government tyrannical or despotic On the contrary he dismisses this as so much empty name calling

In every form of government according to Hobbes the sovereign power must be absolute to be effective Though of so unlimited a pow er men may fancy many evil consequences yet the consequences of the want of it which is perpetual war of every man against his neigh bor are much worse Describing the absolute dominion of the father over his children and the equally absolute dominion of the master over his slaves Hobbes says that the rights and consequences of both paternal and desporti cal dominion are the very same with those of a sovereign by institution for unless the sover eign is also absolute there is no sovereignty at all

To the cry Tyranny Hobbes replies that just as men who find themselves grieved under a *Democracy* call it *Anarchy* or those who are displeased with *Aristocracy* call it *Oligarchy* so they that are discontented under *Monarchy* call it *Tyranny* He holds Aristotle s *Politics* responsible for spreading the fallacy of regarding anything except popular government as tyrannical and in general he blames the Greek and Roman writers for fomenting sedi tion against kings by treating tyrannicide as lawful

Hobbes offers an historical explanation of the origin of these confusions A *Tyrant* he writes originally signified no more simply but a *Monarch* But when afterwards in most parts of Greece that kind of government was abolished the name began to signify not only the thing it did before but with it the hatred which the popular states bore towards it as also the name of King became od ous after the deposing of the Kings of Rome

A word like tyranny carries only emotional force Used descriptively Hobbes declares it s gnifies noth ng more nor less than the name of Sovereignty saving that they that use the for mer word a e understood to be angry with them they call Tyrants He is willing to make him self the object of that anger by identifying a professed h tred of Tyranny with hatred to Commonwealth in general and by egarding the toleration of both hatreds alike as evil seeds of sedition

IN ONE NEGATIVE RESPECT Rousseau seems to agree with Hobbes Not that the man who holds that only republican institutions are legitimate in any way accepts the identification of either prince or popular government with sovereign power But he like Hobbes rejects Aristotle s distinction between the king and the tyrant as good and bad monarchs the one governing for the good of his subjects the other in his own interest Rousseau contends not only that most Greek authors used the word *tyrant* in a dif ferent sense but also he adds it would follow from Aristotle s distinction that from the very beginning of the world there has not yet been a single king

It is only according to a vulgar usage that a tyrant is conceived as a king who governs violently and without regard for justice or law The more precise conception Rousseau insists defines the tyrant as an individual who arro gates to himself the royal authority without having a right to it This is how the Greeks understood the word tyrant they applied it in differently to good and bad princes whose au thority was not legitimate *Tyrant* and *usurper* are thus perfectly synonymous terms

The usurpation of power is according to Rousseau the root of both tyranny and des potism but they are not for that reason to be confused I call him who usurps the royal au thority a tyrant Rousseau writes and him who usurps the sovereign power a *despot* The tyrant is he who thrusts himself in contrary to the laws to govern in accordance with the laws the despot is he who sets himself above the laws themselves Thus the tyrant cannot be a despot but the despot is always a tyrant

Other writers d stinguish between tyranny and despotism on different principles They ac cept where Rousseau rejects the notion that tyranny is not me ely a usurpat on of power but always a self serving or unjust use of that power They reject Rousseau s conception of despotism as inseparable from usurpation Ab solute power can be gained and held in other ways

Locke for example conceives d spot cal do minion as the rule of a master ove slaves or the government of a vanquished people by their conquerors n a ju t war Despotical power in his opinion s an absolute arbitrary power

one man has over another to take away his life whenever he pleases Unlike tyranny it is not power beyond right for the conqueror if he have a just cause has a despotical right over the persons of all that actually aided and con curred in the war against him Since in Locke s view a usurper can never have right on his side despotic dominion when justified is not achieved by usurpation

For Montesquieu despotisms constitute one of the three major forms of government the other two being republics (aristocratic or demo cratic) and monarchies Though he regards des potism as an intrinsically corrupt form of gov ernment in which the rulers wield personal power without the restraint of law he also judges it to be appropriate to the servile na tures or temperaments of certain peoples Like Aristotle and Hippocrates before him he at tributes to the climate and disposition of the Asiatic peoples their submissiveness to the worst excesses of despotism

Montesquieu does not so much condemn despotism as he deplores the conditions which seem to render it necessary or natural for a large part of mankind He does not suggest as Mill does that despotic government can and should serve to civilize those who are as yet unprepared for self government Despotism is benevolent according to Mill only if it prepares a people for freedom if it tries to perpetuate itself it is tyrannical or enslaving

Though Mill holds the view that relative to a free society there cannot be a good despot no matter how benevolent his intentions he also thinks that in dealing with barbarians des potism is a legitimate mode of government provided the end be their improvement and the means justified by actually effecting that end Liberty as a principle has no application to any state of things anterior to the time when mankind has become capable of being improved by free and equal discussion Until then there is nothing for them but implicit obedience to an Akbar or a Charlemagne if they are so for tunate as to find one

Under certain conditions of society a vigorous despotism according to Mill is in itself the best mode of government for training the people in what is specifically wanting to render them capable of a higher civilization In his opinion still other conditions justify des potism I am far from condemning he writes, in cases of extreme exigency the assumption of absolute power in the form of a temporary dictatorship In another place he says that the establishment of the despotism of the Cae sars was a great benefit to the entire generation in which it took place because it put a stop to civil war and abated a vast amount of malver sation and tyranny by praetors and proconsuls

But in all these cases the essential point is that the despotic rule should be temporary Mill ap plies the same criterion to the despotism which occurs in the government of colonial dependen cies It should aim to benefit a subject people by training them in the arts of government and it should not seek to outlast the conferring of this benefit The ruling country he thinks, ought to be able to do for its subjects all that could be done by a succession of absolute mon archs guaranteed by irresistible force against the precariousness of tenure of barbarian des potisms Such is the ideal rule of a free peo ple over a barbarous or semi barbarous one

This may be the ideal but critics of imperial ism like Swift or Marx think that colonial policies are in fact otherwise motivated—by land grabbing by the desire for national ag grandizement and by the profits to be made from the economic exploitation of colonies or subject peoples Throughout the pages of Thu cydides and Tacitus the spokesmen for empire dwell upon the blessings which Athenian or Roman rule bestow only to be answered by the protests of the colonists or the conquered who seem to prefer the insecurities and uncer tainties of liberty to the mixed motives of even the best despot

As already indicated the political signifi cance of tyranny and despotism is broader than the conception of the tyrant as an unjust king or of the despot as an absolute monarch The reign of the Thirty Tyrants at Athens and of the Decemviri at Rome are classical examples of oligarchical tyranny Advocates of republi can or democratic institutions like the writers of the *Federalist* or J S Mill are as much con cerned to safeguard constitutional or represent ative government from the tyranny of special interests—whether of a dominant majority or

of concentrated wealth—as they are to protect the rule of law from the encroachments of despotism which begin with usurpations of power by elected officials

Moderns and ancients alike fear the susceptibility of the mob to the wiles of the demagogue who encourages their lawlessness in order to take the law into his own hands Both Hegel and Plato see in the alliance between a scheming demagogue and an unruly populace the step by which a corrupt democracy turns into a tyranny Though Aristotle disagrees with what he takes to be the theory of Socrates in the *Republic* that tyranny normally arises from democracy in the progressive degeneration of the state his own opinion seems to be that tyr anny is a compound of oligarchy and democracy in their most extreme forms and that almost *all tyrants have been demagogues who gained* the favor of the people by their accusation of the notables

These aspects of tyranny are discussed in the chapters on DEMOCRACY and OLIGARCHY The traditional emphasis however is on the individual tyrant whether he is an hereditary prince who misuses his autocratic power the usurper of an established throne or the demagogue who makes himself dictator However tyranny arises monarchy is the form it usually takes in the pages of history or poetry—the domination of the state by one man. But while the great political philosophers offer conflicting theories of the origin of tyranny there seems to be remarkable agreement concerning the methods the tyrant uses to maintain himself in power

Other political practices may vary greatly from one historical epoch to another but the devices of tyranny seem to have a certain timelessness When they are describing the actions of the tyrant Herodotus Plutarch Tacitus and Gibbon tell stories of iniquity of cruelty of cowardly and unscrupulous stratagems so alike in detail that the reader loses all sense of time and place Nor need he exert any effort of imagination to place the figure of the tyrant thus delineated in the setting of contemporary events

The past also speaks with contemporary relevance in Plato s enumeration of the tyrant s desperate measures his stirring up of foreign wars to smother domestic discord his assassination of enemies his purging of friends or followers, and his confiscation of property as well as his generally indiscriminate blood letting The resort to unwarranted searches and seizures the creation of *ex post facto* crimes the arrest and punishment of men without trial have been writes Hamilton in all ages the favorite and most formidable instruments of tyranny So too in all ages the tyrant fearing reprisal and revenge lives in a state of war turns his palace into an armed camp and goes nowhere without a numerous bodyguard which as both Aristotle and Machiavelli suggest functions most efficiently when composed of hirelings or mercenaries

The great books contain not only the record of tyrannical perfidy and violence but also rec*ommendations to the would be tyrant of the* best means to use for his nefarious purposes Though Rousseau refers to Machiavelli s *Prince* as the book of Republicans and thinks that the choice of his detestable hero Caesar Borgia clearly enough shows his hidden aim the rules which Machiavelli formulates for the prince seem on the surface at least to be essentially similar to the advice Aristotle gives the tyrant

The end in both cases is the same—success in the effort to gain and keep power The means in general are force and fraud or as Machiavelli phrases it the methods of the lion and the fox Machiavelli counsels the prince to inspire fear in such a way that if he does not win love he avoids hatred He tells him that he should appear to keep faith without hesitating to break his promises that he should avoid flatterers and sycophants and that he should acquire a reputation for liberality without cost to himself Not very different is Aristotle s ad vice to the tyrant—to lop off the heads of those who are too high and to humble all the rest to sow discord among his subjects to impoverish the people by multiplying taxes to employ informers and to encourage the betrayal of one faction by another

But in his suggestion of another course for the tyrant to take—the policy of not merely pretending but of actually trying to conduct himself like a just king—Aristotle seems to deviate from the spirit of Machiavelli s maxim that

the appearance of virtue is profitable so long as it does not interfere with doing whatever is expedient however vicious Yet even here Aristotle says that the tyrant must be careful to keep power enough to rule over his subjects whether they like him or not for if he once gives this up he gives up his tyranny

The best commentary on these recommendations seems to be indirectly expressed by their authors Both Aristotle and Machiavelli draw one striking conclusion from the history of those—call them princes or tyrants—who have tried to put such rules into practice Whether its collapse is due to the inherent weakness of might without right as Aristotle suggests or in Machiavelli s terms to the unforeseeable mishaps of fortune tyranny of all forms of government seems to be the shortest lived

OUTLINE OF TOPICS

1 The nature and origin of tyranny 947

1a The lawlessness of tyrannical rule might without right

1b The injustice of tyrannical government rule for self interest 948

1c Usurpation the unauthorized seizure of power

1d The character of the tyrannical man the friends of the tyrant 949

2 Tyranny as the corruption of other forms of government

2a The perversion of monarchy the tyrannical king

2b The degeneration of oligarchy the tyranny of the wealthy 950

2c The corruption of democracy the tyranny of the masses or of the majority the rise of the demagogue

3 The choice between tyranny or despotism and anarchy

4 The nature and effects of despotism 951

4a The relation of despotism to tyranny and monarchy the benevolence of despots

4b The comparison of paternal and despotic dominion the justification of absolute rule by the incapacity of the ruled for self government

5 The contrast between despotic and constitutional government government by men and government by laws 952

5a Despotic and constitutional government with respect to political liberty and equality the rights of the governed

5b Despotic and constitutional government with respect to juridical defenses against misgovernment or redress for grievances through due process of law 953

5c The location of sovereignty in despotic and constitutional government the sovereign person the sovereign office the sovereign people

5d The analogues of despotic and constitutional rule in the relation of the powers of the soul the tyranny of the passions

6 Imperial rule as despotic and as tyrannical or benevolent the government of conquered peoples or colonies 954

7 The ways of tyrants or despots to attain and maintain power

8 The fate of tyrants revolutions for liberty and justice against tyranny and despotism tyrannicide 955

Chapter 96 UNIVERSAL AND PARTICULAR

INTRODUCTION

ON such speculative problems as the exist ence of God the immortality of the soul the infinity of time and space or the limit of human knowledge the conversation of philosophers seems to make contact with the discourse of scientists the language of poets and the speech of ordinary men The philos ophers usually begin at least by propounding questions which correspond to those asked by men who do not profess to be philosophers But throughout the tradition of western thought the problem of the universal unlike these others seems to have the character of a professional secret

The various solutions of the problem of the universal are so many esoteric doctrines each with its own sectarian name The initiated can distinguish themselves from the novices by their proficiency in this area and the outsider who overhears the discussion of professional may be completely left behind wondering as much about how the question arose as about the meaning of the conflicting answers

No genuine philosophical problem it seems reasonable to suppose can be so remote from questions intelligible to common sense If it is not just a specious riddle to amuse the experts the problem of the universal despite its tech nical appearance should raise issues from wh ch in some form or other no one can escape Wh th er or not this is so can be tested by consider ng the various ways in which the problem occurs in other chapters under different guises and in different contexts

In the chapter on SAME AND OTHER we find the quest on how two individu ls can be the sa ne in some particular respect—how n spite of their separate existence they can share in the possession of a common nature or attribute Anyone who classifies things or tries to make definitions may be led to wonder whether clas sifications are entirely verbal and definitions fictions of the mind or whether things them selves belong together in some real community based upon an inherent sameness or similarity

In the chapter on ONE AND MANY the ques tion takes the form of asking how two or more things can be one in any way Again both science and common sense seem able to deal with an infinite number of individuals by apply ing a single name to them or apprehending them all under a single concept or notion But it may be asked what justifies the denomination of many things by one name What unity in the things verifies the tendency of thought to uni fy them conceptually? Does a real unity exist in things by virtue of their being somehow one as well as many or as a result of the many somehow participating in a one which exists separately from them?

In the chapters on DEFINITION and SIGN AND SYMBOL the same questions are at lea t implicit In connection with the object of definition one issue is whether what Aristotle calls the formu lable essence exists as the common nature of many individuals or whether as Locke sug gests definitions formulate only the nominal not the real essences of things As that and re lated issues are faced anyone who acknowledges the familiar distinction between proper and common names may become involved in ques tion ng what common or general names signify and how they get the meanings with which they are used in everyday d scourse

The problem of the sameness of things dis tinct from one another the problem of the one *in* the many or the one *and* the many the prob lem of essences and common names are other statements of the problem of the universal and the particular Attention to the words them selves confirms th s The word *universal* con notes a unity—the one as opposed to the many

the common as opposed to the unique or special The word *particular* connotes participation—the part as opposed to the whole the member as opposed to the class As the reference already made to essence and individual indicates these are not the only pairs of terms which somehow correspond in significance to universal and particular but others like model and imitation form and matter abstract and concrete are more obscure in meaning The discussion of universal and particular throws light on them rather than gains clarity from them

THE READER OF THE great books can witness the origin of the problem of the universal and particular as it occurs in a conversation not between technical philosophers but between Socrates and his friends In the *Meno* Socrates and Meno get into a discussion of how virtue is acquired Socrates thinks it is necessary to inquire first what virtue is Meno responds by enumerating different virtues but Socrates is not satisfied He wants a definition which will cover all the virtues Even if Meno could say what justice or temperance is that would not do for each of these is as Socrates says *a* virtue not *virtue*—a particular virtue or a part of virtue not the whole of it

In searching after one virtue Socrates tells Meno we have found many but we have been unable to find the common virtue which runs through them all To help Meno who claims he is not able to follow Socrates in his attempt to get at one common notion of virtue Socrates shifts the discussion to colors and figures He warns Meno that color cannot be defined by naming colors and that even if he could define a square a circle and all other figures he would not be saying what *figure* is To proceed in this way is to be landed in particulars

Tell me then Socrates says since you call them by a common name and say that they are all figures even when opposed to one another what is that common nature which you designate as figure?

If Meno were to reply I do not know what you want not much further explanation could be given To someone who remained perplexed at this point we could only say Socrates suggests Do you not understand that we are looking for the same in the many? Or put in another form we might ask he says What is that [one in many] which you call figure and which includes not only the round and straight figures but all?

Thus stated the problem of the universal seems inescapable—a problem for everyone not just for philosophers But the philosophers complicate the problem almost as soon as it is stated Giving his version of the history of philosophy Aristotle offers an explanation of how the problem shifted to another level Socrates he writes was busying himself about ethical matters and seeking the universal in these ethical matters [he] fixed thought for the first time on definitions Plato accepted his teaching but held that the problem applied not to sensible things but to entities of another kind—for this reason that the common definition could not be a definition of any sensible thing as they were always changing Things of this other sort he called Ideas and sensible things he said were all named after these and in virtue of a relation to these for the many existed by participation in the Ideas that have the same name as they

It is at this point according to Aristotle that the great philosophical controversy begins Whereas the thinkers of old ranked particular things as substances *e g* fire and earth not what is common to both body the Platonists or idealists— the thinkers of the present day — tend to rank universal as substances for genera are universal Aristotle repeatedly tries to distinguish between the Socratic inquiry and what he regards as the Platonic doctrine—the theory of Ideas The first to raise the problem of universal definition Socrates he writes did not make the universals or the definitions exist apart they however —the Platonists— gave them separate existence and this was the kind of thing they called Ideas

As between Socrates and his disciple Aristotle does not hesitate to take sides Socrates gave the impulse to this theory of ideas but he did not *separate* universals from individuals and in not separating them Aristotle adds he thought rightly The issue between Aristotle and his own teacher Plato cannot how

ever be stated by so simple an affirmation and denial

On Aristotle s side it involves the fundamental principles of his metaphysics especially his doctrine of substance as well as his theory of what and how the intellect knows as contrasted with the perceptions of the senses On Plato s side it involves many questions concerning the intelligible and the sensible being and becoming the one and the many—questions the Aristotelian answers to which would not satisfy Plato

Wherever the truth lies Aristotle recognizes that on this issue perhaps more than on any other he is most sharply opposed to Plato It is the one matter wherein he feels a conflict between devotion to his teacher and to the truth as he sees it The consideration of the universal good he declares in the *Ethics* is made difficult by the fact that the Forms have been introduced by friends of our own but while both are dear *piety requires us to honor* truth above our friends

THE HISTORIANS OF PHILOSOPHY beginning with Aristotle attribute one solution of the problem of universals to Plato That solution comes to be called realism because it affirms the independent reality of universals as separately existing Ideas or Forms But all the commentators do not like Aristotle dissent from Plato s solution In our own time for example Bertrand Russell treating of the world of universals in the *Problems of Philosophy* says the problem with which we are now concerned is a very old one since it was brought into philosophy by Plato Plato s theory of ideas is an attempt to solve this very problem and in my opinion it is one of the most successful attempts hitherto made The theory to be advocated in what follows is largely Plato s with merely such modifications as time has shown to be necessary

For one thing Russell thinks the word idea has acquired in the course of time many associations which are quite misleading when applied to Plato s ideas We shall therefore he writes use the word universal instead of the word idea to describe what Plato meant We speak of what ver s g ven in sensation as a *particular* by opposition to this a *universal* will be anything which may be shared by many particulars Broadly speaking proper names stand for particulars while other substantives adjectives prepositions and verbs stand for universals

Russell here calls attention to another point which he thinks has too seldom been observed *namely that universals are not exclusively signified* by common nouns and adjectives but that in addition there are relational universals signified by prepositions and verbs This sort of universal according to him most readily shows that universals have being apart from particulars It can also be shown he argues that their being is not merely mental that whatever being belongs to them is independent of their being thought of or in any way apprehended by minds

If the word existence implies definite location in time and space then Russell concludes in the sense in which thoughts and *feelings minds and physical objects exist* universals do not exist We must say instead that they *subsist* or *have being* where being is opposed to existence as being timeless The world of universals therefore may also be described as the world of being The world of being is unchangeable The world of existence is fleeting According to our temperaments we shall prefer the contemplation of the one or the other The one we do not prefer will probably seem to us a pale shadow of the one we prefer and hardly worthy to be regarded as in any sense real But the truth is that both have the same claim on our impartial attention both are real and both are important to the metaphysician Indeed no sooner have we distinguished the two worlds than it becomes necessary to consider their relations

IT IS THIS CONSIDERATION which seems to be for Plato *the* problem of the universal—the central difficulty in the theory of Ideas or separate Forms As indicated in the chapters on FORM and IDEA the separation of the two worlds—the sensible world of becoming and the intelligible world of being—always calls for some explanation of their resemblance

Socrates sometimes refers to the doctrine of Ideas as if its truth could be assumed and sometimes argues the necessity of a realm of immu

table and intelligible being as the object of thought comparable to sensible changing things as the object of perception In the *Phaedo* for example he gets Cebes to admit that the ideas which in the dialectical process we define as essences or true existences are not subject to change but that they are always what they are having the same simple self existent and unchanging forms In contrast to absolute beauty or goodness the many beautiful or good things are always in a state of change These Socrates says you can touch and see and perceive with the senses but the unchanging things you can only perceive with the mind Let us suppose then he adds that there are two *sorts of existences—one seen the other unseen*

Later in the same dialogue Socrates repeats the assumption that there is an absolute beauty and goodness and greatness and the like No other assumption seems to him to provide as satisfactory an explanation of how particular things can be beautiful or good or have any other characteristics Nothing makes a thing beautiful he declares but the presence and participation of beauty in whatever way or manner obtained for as to the manner I am uncertain but I stoutly contend that by beauty all beautiful things become beautiful

In later Platonic dialogues the question of the manner comes to the fore Though the Eleatic Stranger in the *Sophist* refers to the endless conflict raging between the materialists and the idealists concerning the existence of the unseen world of ideas he himself seems to be doubtful only on the point of how the changing things of sense participate in the immutable forms One answer is suggested in the *Timaeus* According to the story of creation which Timaeus tells the artificer of the world made its sensible particulars copy an eternal pattern When many things seem to be of one nature or to share the same quality they are so by virtue of imitating the eternal forms which are not only absolute essences in themselves but are also the models for created or generated things

But in the *Parmenides* Socrates seems unable to defend the view that the ideas are as it were patterns fixed in nature and other things are like them and resemblances of them—for what is meant by the participation of other things in the ideas is really assimilation to them Nor can he meet other objections which Parmenides raises such as the difficulty of two or more individuals participating in one idea for if the idea is wholly in one individual it cannot be in another and if each of the many partake of the idea only in part then the idea cannot be one and indivisible In what way Socrates Parmenides asks will all things participate in ideas if they are unable to participate in them as parts or wholes?

In the course of the discussion Parmenides rebukes Socrates for being squeamish about positing absolute essences for such things as hair mud dirt or anything else which is vile and paltry as well as for thin s which are beautiful and good But his main intention seems to be to leave Socrates with an unresolved dilemma On the one hand the difficulties with the theory of Ideas make the denial of their separate existence reasonable on the other the denial of their existence seems to make thought and reasoning impossible because it deprives the mind of its proper objects

Some of Aristotle s arguments against the separate existence of universals repeat the objections raised by Parmenides to which no answer is given in the dialogues of Plato If it were not for the fact that Aristotle attributes to Plato himself the theory he criticizes the dialogues would leave us in some doubt as to whether it is Plato or his followers the Platonists who hold that theory But whether or not Aristotle s criticisms apply to Plato—and even if they involve some misunderstanding of his doctrine—the objections Aristotle raises help define his own position

To say that the Forms are patterns and that other things share in them Aristotle writes is to use empty words and poetical metaphors In his view the most paradoxical thing of all is the statement that there are certain thin s besides those in the material universe and that these are the same as sensible things except that they are eternal while the latter are perishable To posit the separate being of the forms of things seems to him a useless multiplication of existences To say that there must be Ideas of all things that are spoken of universally is to make substances of ideas

Those who say the Forms exist would be right Anstotle concedes *if* they are sub stances He does not think it is impossible to establish the existence of imperishable and in sensible substances but such substances if they exist would not stand in relation to sensible substances as universal to particular or as one to many His objection to the theory of Ideas is that in speaking of absolute beauty or beauty itself, of the idea Man or man itself the Platon ists do no more than add words like absolute or itself' to the names of sensible things and posit the existence of these absolutes or uni versals over and above the existence of the sensible particulars having the same name

Anstotle s own position seems to be that only individual substances exist whether they are sensible or intelligible perishable or eternal and that no universal can be a substance or exist separately in and of itself He does not thereby deny the reality of the universal On the contrary he holds that without the uni versal it is not possible to get knowledge *i e* scientific knowledge in distinction from mere sense perception All knowledge is of the universal and of the such he writes yet in adding that substance is not a universal but is rather a this Anstotle indicates what is for him the central problem of the universal

Anstotle s theory that the mind abstracts universal concepts from the particulars of sense experience and that such concepts are the terms of the universal propo itions constituting scien tific knowledge l aves a question concerning the object of science If science is kno vledge of real existence not of our own concepts and if only individual things really exist then how can the object of science be the universal not the ind vidual? What is the object apprehended by the universal concept man or horse?

Anstotle s answer seems to be that if the un versal term man can be truly predicated of an indefinite number of indiv duals it must signify something common to them all The common nature or properties shared by a num ber of individuals cannot be actually un versal hov ever since in Anstotle s opinion whatever exists in the individual—the form as well as the matter of the concrete substance—is itself indi vidual He finds it necessary to say therefore that the universal exists potentially not actual ly whenever a number of individuals have something in common

The form which constitutes human nature for example is an individual form in Socrates and Callias but it has the potentiality of being universal insofar as it is capable of being sepa rated from the individual matter of these t vo men by the abstractive power of the mind When the abstraction takes place and results in the universal concept man the form thus re ceived in the mind becomes a tually universal and enables the mind to apprehend the nature common to all individual men

ARISTOTLE S DOCTRINE THAT the universal exists potentially in individual things and actually in the abstract concepts of the mind later comes to be called moderate realism in contrast to the extreme realism of the position which as serts the actual subsistence of universals out side of minds as well as apart from individual things It affirms that the universal has what Russell calls extra mental reality even though it severely qualifies the real being of the uni versal by saying it is neither actual nor sub sistent

As Anstotle denies unqualified reality to universals later philosophers deny that they have any reality at all Those who are some times called conceptualists admit the exist ence of universals only as abstract ideas in the mind The nominalist position taken by Hobbes and Berkeley goes further and even denies abstract ideas or un versal notions in the mind It holds that universality is a property of words alone which manifests itself in the mean ing of general or common names

In the progressive complication of the con troversy each of the theories which has acquired a traditional title undergoes modification as it is reformulated in d fferent contexts This is es pecially true of the two m ddle positions which tend to lean toward one or the other of the extremes

Locke for example may be called a con ceptualist because he thinks that general names derive their universal s gnificance from the ab stract ideas they signify But though he denies that by means of our universal notions or ab str t ideas we can kno v the real essences of things he does not deny real essences To this

extent he may lean toward moderate realism more than a philosopher like William of Ockham or a psychologist like William James who says *We must decide in favor of the conceptualists* and affirm that the power to think things qualities relations isolated and abstracted from the total experience in which they appear is the most indisputable function of our thought Similarly the development which Aquinas gives to Aristotle s views especially in the point he adds concerning ideas in the mind of God—the eternal exemplars —may be a form of moderate realism which more than Aristotle s has some affinity with the theory of self subsistent ideas as the eternal archetypes for sensible particulars

Aquinas presents his own theory in the context of stating his understanding of the issue between Plato and Aristotle Plato supposed he declares that the forms of natural things subsisted apart from matter and consequently that they are intelligible for a thing is actually intelligible from the very fact that it is immaterial And he called such forms *species* or *ideas* From a participation in these he said that even corporeal matter was formed in order that individuals might be naturally established in their proper genera and species But since Aristotle did not allow that the forms of natural things exist apart from matter and since forms existing in matter are not actually intelligible it follows that the natures or forms of the sensible things which we understand are not actually intelligible

Aquinas speaks of the forms (which exist only in union with matter in individual things) as universal forms even though they are not actually intelligible We abstract universal forms from their particular conditions he says and by doing so we make them actually intelligible The Platonic error in his opinion consists in thinking that the form of the thing known must be in the knower in the same manner as in the thing known From the fact that the form of the thing understood is in the intellect under conditions of universality immateriality and immobility Plato concluded erroneously according to Aquinas that the things which we understand must subsist in themselves under the same conditions of immateriality and immobility

As Aquinas states what he takes to be Aristotle s correction of this error it consists in distinguishing two ways in which the universal can be considered First the universal nature may be considered together with the intention of universality And since the intention of universality—*i e* the relation of one and the same to many—is due to intellectual abstraction the universal thus considered is subsequent in our knowledge Secondly the universal can be considered according to the nature itself (for instance *animality* or *humanity*) as existing in the individual In the order of generation and time the potential universal precedes the actual universal that is the universal form or common nature exists in individual things under conditions of particularity before it exists in the human mind under conditions of abstraction

Even as forms exist in things (thou h they are not actually universal prior to their existence as universal concepts of the mind) so they have a mode of being prior to their existence in things Here Aquinas attributes to Augustine the correction of a pagan error and the substitution for it of a Christian truth Whenever Augustine who was imbued with the doctrines of the Platonists he writes found in their teaching anything consistent with the faith he adopted it and those things which he found contrary to faith he amended Plato positing the forms of things subsisting of themselves apart from matter had supposed that just as corporeal matter by participating in the Idea of stone becomes a stone so our intellect by participating in the same Idea has knowledge of the stone But according to Aquinas it seems contrary to faith that the forms of things should subsist of themselves without matter outside the things themselves Therefore in place of the Ideas defended by Plato Augustine said that the exemplars of all creatures existed in the divine mind It is according to these that all things are formed as well as that the human soul knows all things

THE SOLUTION TO THE problem of universals which Aquinas proposes seems to involve a threefold distinction with respect to the being of forms they are (1) in the human mind by

abstraction from our experience of sensible particulars (2) in individual things and (3) prior to their existence in things in the divine mind

But Aquinas himself says that in God there is no distinction between universal and particular nor does knowledge exist in God after the mode of created knowledge so as to be universal or particular The divine ideas whether considered as the exemplars by which God creates things or as the types and likeness by which God knows them are not abstractions and so do not have the universality characteristic of human concepts Whereas our abstract universals do not give us knowledge of individual things in their singularity the divine ideas according to Aquinas are the principles whereby God at once knows the singular and the universal

If the universal *as such* is not in the divine mind neither in Ockham s opinion is it really in things—not even potentially Everything that exists in an individual—its form and matter all its parts and properties—is the unique and singular possession of that individual If there were something common to two things it would have to be one and two at the same time As common to both it would have to be somehow one and the same in both yet as existing in each it would have to be distinct in each it would have to be as singular in each as each individual thing in which it existed But since Ockham regards this as impossible he concludes that no universal really exists outside the soul in an individual substance nor is it of the substance or the being of things but is only in the soul

The old riddle thus returns in another form If abstract concepts are in the mind—or if as Ockham suggests the logical terms animal and man are universals because predicable of many not through themselves but for the things they signify —then what in reality is the object signified by the universal term or concept? It cannot be the many unless the numerically distinct individuals are also alike as men or animals and how can they be really alike as opposed to being merely conceived as such unless they have a common nature or attribute and to that extent are one and the same?

Locke puts the question another way Since all things are only particulars he asks how come we by general terms or where find we those general natures they are supposed to stand for? He answers that words become general by being made the signs of general ideas and ideas become general by separating from them the circumstances of time and place and other ideas that may determine them to this or that particular existence By this way of abstraction they are made capable of representing more individuals than one each of which having in it a conformity to that abstract idea is (as we call it) of that sort

But if as Locke goes on to say general natures (or genera and species) are nothing else but abstract ideas more or less comprehensive with names annexed to them then in what way do the many individuals represented by one abstract idea have in them a conformity to that abstract idea ? Locke s position seems to avoid this problem Abstract ideas he writes give us no knowledge of existence at all Only particular propositions are about real existences Universal propositions of whose truth or falsehood we can have certain knowledge concern not existence Such propositions express nothing but the agreement or disagreement of our abstract ideas

In addition to denying their reference to reality Locke regards abstract ideas as fictions or contrivances of the mind which are imperfect precisely to the extent that they succeed in being universal The general idea of triangle he observes must be neither equilateral isosceles nor scalene but all and none of these at once In effect it is something imperfect that cannot exist Where Locke seems to mean only that there can be no counterpart in reality to our general ideas Berkeley observing the same imperfection in what are supposed to be abstract ideas denies that they can exist even in the mind I deny he writes that I can abstract from one another or conceive separately those qualities which it is impossible should exist so separated or that I can frame a general notion by abstracting from particulars

Berkeley admits that a man may consider a figure merely as triangular without attending to the particular qualities of the angles or relations of the sides So far he may abstract but

this will never prove that he can frame an ab stract general inconsistent idea of a triangle He recognizes also that all our common names have general significance but he rejects Locke s explanation of their general meaning A word becomes general he says by being made the sign not of an abstract general idea but of sev eral particular ideas any one of which it indif ferently suggests to the mind

Does a nominalist like Berkeley escape the persistent riddle? Does it not reappear in the question which must be asked what is there in this set of particular ideas as opposed to some other set which makes it possible for a general name to signify any one of them in differently? If each particular idea were abso lutely unique and had nothing in common with any other would the universal have any truth even on the level of names?

James thinks the nominalists are somehow forced to admit a *quasi* universal something which we think *as if it were* universal though it is not and in all that they say about this some thing which they explain to be an indefinite number of particular ideas the same vacilla tion between the subjective and objective points of view appears The reader never can tell James continues whether an idea spoken of is supposed to be a knower or a known The authors themselves do not distinguish They want to get something in the mind which shall *resemble* what *is out of the mind however* vaguely and they think that when that fact is accomplished no farther questions will be asked

Some philosophers deal with the universal and particular in a manner which leads away from rather than into the traditional problem

To Spinoza for example univer al terms such as *man horse dog* represent confused im ages drawn from sense experience They pro v de us with an inadequate knowledge of things To know things adequately we must proceed from an adequate idea of the formal essence of certain attributes of God to the adequate knowledge of the essence of things Quite opposite to the abstract universal (or *indeterminate image from experience*) the adequate idea is universal in the totally differ ent sense of comprehendin, an infinite whole

Hegel also distinguishes between abstract universality and true infinity or concrete universality The former is something de terminate *i e* being abstraction from all deter minacy it is itself not without determinacy to be something abstract and one-sided consti tutes its determinacy its defectiveness its finitude The antithesis of the abstract uni versal is the particular the determinate con tent implicitly contained in an abstract uni versal The synthesis is the individual not the particular individual but the infinite indi vidual which is the concrete universal

The concrete universal is neither the uni versal as a common characteristic nor the ab stract universality which stands outside and over against the individual the abstract iden tity of the Understanding It is the uni versality which has the particular as its opposite but the particular which by its reflection into itself has been equalized with the universal This unity is individuality not individuality in its immediacy as a unit but individuality in accordance with its concept For Hegel the concrete universal is the immanent Idea itself It is the manifestation of the Absolute Spirit or God

However it is formulated and whether or not it is or can be solved the problem of the uni versal seems to have a critical bearing on the discussion of many other great ideas In addition to the chapters enumerated at the be innin we can now see that the universal the par ticular and the individual are implicated in the consideration of Being and Infinity Form and Idea Matter and Mind Experience Induction Judgment and Science These chapters in turn do more than throw light on the various solutions proposed to the prob em of the universal They help us understand the importance of the problem—certainly to the philosophers of the western tradition If in the broader context of connected issues it is dis covered that the proof of man s distinctive rationality or even the possibility of an im mortal soul may depend on the affirmation or denial of universals at least a concepts in the mind then perhaps some tolerance and pa tience may be won for the burdensome techni cal ties of the problem

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to For example in **4** Homer *Iliad* bk ii [265 83] **12d** the number **4** is the number of the volume in the set the number **12d** indicates that the passage is in section d of page 12

Page Sections When the text is printed in one column the letters **a** and **b** refer to the upper and lower halves of the page For example in **53** James *Psychology* **116a 119b** the passa e begins in the upper half of page 116 and ends in the lo ver half of page 119 When the text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand s de of the pa e the letters c and d to the upper and lo ver halves of the right hand side of the page For example in **7** Plato *Symposium* **163b 164c** the passa e begins in the lower half of the left hand side of page 163 nd ends in the upper half of the right hand side of page 164

Chapter 97 VIRTUE AND VICE

INTRODUCTION

IN their currently popular connotations the words virtue and vice have extremely limited significance Virtue tends to be identified with chastity or at least with conformity to the prevailing standards of sexual behavior The popular notion of vice retains a little more of the traditional meaning insofar as it implies injury to a person s character or health as the result of strong *habitual* addictions But as in the case of virtue the things which are popularly called vices are largely concerned with pleasures or sensual indulgences

In the tradition of the great books however the scope of these terms and the range of the problems in which they are involved seem to be co-extensive with morality or in other words with the broadest consideration of good and evil in human life with what is right and wrong for man not only to do but also to wish or desire and even to think For some of the great moral philosophers other terms—such as duty for Marcus Aurelius and Kant or pleasure and utility for Mill—seem to be more central But for Plato Aristotle and Aquinas virtue is a basic moral principle By reference to it they define the good man the good life and the good society Yet even for them it is not the first principle of ethics They define virtue itself by reference to a more ultimate good—happiness For them the virtues are ordered to happiness as means to an end

THE ANCIENT ENUMERATION of particular virtues may show the range of things comprehended under the notion of virtue generally It may also further sharpen the contrast with the contemporary tendency to use the words virtue and vice as if they applied only to matters which fall within the sphere of one of the virtues That one is the virtue which both Plato and Aristotle call *temperance and which they* conceive as concerned chiefly with the bodily appetites and pleasures Plato and Aristotle give somewhat different enumerations but courage and justice are as fundamental for them as temperance and when certain virtues come later to be classified as the cardinal or principal virtues these three are always named together In that classification there is a fourth—prudence or as it is sometimes called practical wisdom

Plato s enumeration of the virtues in the Republic also adds wisdom to temperance courage and justice This indicates at once that the ancient conception of virtue as the quality which makes a man good extends to his mind as well as to his character—to the sphere of thinking and knowing as well as to desire emotion and action Aristotle makes this explicit by dividing all the virtues into moral and intellectual or excellences of character and of mind He names five intellectual virtues in addition to wisdom and prudence (which he distinguishes as speculative and practical wisdom) he lists art science and what he calls intuitive reason which Aquinas later calls understanding

The division of the virtues into moral and intellectual leads in Aristotle s analysis to the further distinction between those intellectual virtues—understanding science wisdom—which represent the possession of speculative insight or theoretic knowledge and those—art and prudence—which represent skill in practical thinking or in the application of knowledge to production and action respectively Because it is concerned with action or moral conduct the virtue of prudence is most closely associated with the moral virtues of justice courage and temperance The grouping together by Aquinas of these four as the cardinal virtues carries the implication that the remaining four (*i e art and the three virtues of the speculative rea*

son) play a secondary role The implication is simply that a man may be made good as a scientist or good as an artist by the acquisition of these virtues but he is not made good as a man by these virtues nor do they enable him to lead a good life and achieve happiness as do the moral virtues accompanied by prudence

In line with the principle by which he regards certain virtues as cardinal or indispensable for human rectitude and welfare the Christian moralist goes further than the moral philosopher in developing the theory of virtue Considering man s limitations and his fallen nature he holds that more than all the natural virtues (*i e* the virtues which men can attain by their own effort) is required for salvation—for the supernatural end of eternal happiness Faith hope and charity according to St Paul are indispensable to lift man s life to a plane and direct it to a goal which exceed his nature These gifts of God s grace are subsequently treated by Augustine and Aquinas as virtues—supernatural not natural virtues Aquinas specifically calls them theological virtues to distinguish them from other supernatural endowments such as the infused moral virtues and the gifts of the Holy Ghost

THE READER MAY OBSERVE that of all the virtues so far named only the three *theological* virtues are not the subject of separate chapters in this collection of great ideas The chapters on COURAGE JUSTICE TEMPERANCE PRUDENCE WISDOM may include discussions of these qualities which do not specifically treat them as virtues Certainly that is true of the chapters on ART and SCIENCE and the chapter on PRINCIPLE wherein the virtue of intuitive reason or the understanding of first principles is considered Nevertheless that all but one of these chapters bear the name of the traditionally recognized virtues indicates how widely and variously they make their appearance throughout the great books—by example and comment in poetry and history as well as by definition and analysis in the ethical and political treatises In contrast the theological virtues appear only in Christian not pagan literature and then mainly in religious rather than secular writing

It is also of interest to note the relation which this chapter bears to those dealing with other fundamental concepts of moral philosophy or theology Some of the terms mentioned in the foregoing paragraphs—duty pleasure happiness good—name chapters which are co implicated with this one in the problem of how men should live and what they should seek The Outline of Topics will reveal still others—knowledge desire emotion reason will wealth, honor friendship teaching family state citizen law sin and grace—each of which is (or indicates) the title of a chapter that treats of matters related to virtue as cause or consequence as psychological factor or external condition

One chapter not yet mentioned has maximum relevance for most of the authors who offer some analysis of virtue The chapter on HABIT treats an idea that is crucial to the definition of virtue Aquinas for example allocates the discussion of virtue and vice to his Treatise on Habit in the *Summa Theologica* He divides this treatise into questions concerning habits in general and questions concerning good and evil *habits—or virtues and vices*—in particular But the notion that virtue combines the elements of habit and goodness is not peculiarly his With varying degrees of emphasis and explicitness it appears in Plato and Aristotle in Augustine Bacon Hegel and James Kant alone expressly *dissents declaring that virtue is* not to be defined and esteemed merely as *habit* and as a long *custom* acquired by the practice of morally good actions

THE DISCUSSION OF VIRTUE originates in the dialogues of Plato and the *Ethics* of Aristotle with a number of related questions Meno s opening question— Can you tell me Socrates whether virtue is acquired by teaching or by practice or if by neither teaching nor practice then whether it comes to man by nature or in some *other way?* —*requires in the* opinion of Socrates other questions to be faced what virtue is how virtue is related to knowledge whether virtue is one or many and if many how the several particular virtues are related to one another

In the course of the dialogue each of the alternatives is considered If virtue were identical with knowledge it could be taught and learned just as geometry is If virtue were simply a hab-

it it could be acquired by practice that is by the repetition of similar acts But neither practice nor teaching seems by itself to explain how men come by virtue and even less why virtuous fathers should so often fail to produce virtue in their sons Yet Socrates does not completely dismiss these possibilities or the possibility considered at the end that virtue comes to the virtuous by the gift of God What truth there is in each of them he concludes cannot be determined until we know precisely what virtue is

Another dialogue the *Protagoras* pursues a similar inquiry and seems to reach a similarly indeterminate onclusion The relation of virtue to knowledge here leads to the question whether wisdom and temperance and courage and justice and holiness are five names of the same thing To the extent that each depends on knowledge of what is good and evil they would seem to be if not identical at least inseparable aspects of the same thing Protagoras objects on the score that a man may be courageous and at the same time utterly unrighteous unholy intemperate ignorant But Socrates finally gets him to admit reluctantly that courage consists in knowledge and cowardice in ignorance of what is and is not dangerous

It was Protagoras, however who originally contended against Socrates that virtue can be taught The reduction of all the virtues to some form of knowledge would therefore seem to confirm his opinion Socrates in winning the argument about virtue and knowledge seems to overthrow his own view that virtue cannot be taught The result of our discussion Socrates says at the end appears to me to be singular For if the argument had a human voice that voice would be heard laughing at us and saying Protagoras and Socrates you are strange beings there are you Socrates who were saying that virtue cannot be taught contradicting yourself now by your attempt to prove that all things are knowledge including justice and temperance and courage—which tends to show that virtue can certainly be taught Protagoras on the other hand who started by saying that it might be taught is now eager to prove it to be anything rather than knowledge

The only way this terrible confusion of our ideas might be cleared up Socrates suggests is for the conversation to go on until we ascertain what virtue is But that particular conversation does not go on nor do the definitions of virtue which are proposed in other Platonic dialogues seem to be decisive on the point whether virtue is knowledge or whether it can be taught In the *Laws* for example the Athenian Stranger saying that harmony of the soul taken as a whole is virtue proposes that education should consist in training the first instincts of virtue in children by producing suitable habits in them But his training does not seem to be like ordinary teaching the inculcation of knowledge It is training in respect of pleasure and pain whereby we are led to hate what we ought to hate and love what we ought to love

In the *Republic* Socrates compares the harmony produced by virtue in the soul with the harmony of the parts in a healthy body Virtue is the health and beauty and well being of the soul he declares and vice the disease and weakness and deformity of the same Though wisdom consists in the rule of the other parts of the soul by reason in the light of knowledge of what is for the interest of each of the parts and of the whole it does not seem to be the whole of virtue nor does Socrates suggest that men become virtuous simply by becoming wise On the contrary he intimates that good practices lead to virtue and evil practices to vice and that like certain bodily qualities the virtues of the soul can be implanted by habit and exercise

IT IS SOMETIMES SUPPOSED that Aristotle differs from Plato on fundamental points in the theory of virtue The fact that Aristotle criticizes Socrates for thinking that all the virtues are forms of practical wisdom seems to imply a basic disagreement on the relation of virtue to knowledge But Aristotle also remarks that Socrates was right in saying they implied practical wisdom His own view that the moral virtues of courage temperance and justice are insparable from the intellectual virtue of prudence does not seem to differ substantially from the statements of Socrates that virtue must be a sort of wisdom or prudence and that virtue is either wholly or partly wisdom Such differ

ence as there is appears to be not so much in what is being affirmed or denied as in the manner of statement or analysis and beyond that perhaps in a method of exposition which permits Aristotle to give definite answers to questions Plato s dialogues often leave unanswered

Aristotle s analysis of course sometimes changes the questions themselves to make them answerable but this is not always so His summary of existing opinions concerning the acquisition of virtue—that some think we are made good by nature others by habituation others by teaching —is nearly equivalent as an enumeration of the possibilities to Meno s opening question But where Socrates in answering Meno contents himself with suggesting that there may be some truth in each possibility as against the others Aristotle definitely affirms that the whole truth about the matter combines all three factors There are three things he writes which make men good and virtuous these are nature habit rational principle Even Socrates final point that virtue may be a gift of God seems to be affirmed by Aristotle s comment that in effecting virtue nature s part evidently does not depend on us but as a result of some divine causes is present in those who are truly fortunate

But in the case of two Platonic questions—the one about the relation of virtue to knowledge and the other about the unity of virtue—Aristotle s analysis transforms the problem His basic distinction between moral and intellectual virtue turns the question about virtue and knowledge into one concerning the role which one very special kind of knowledge represented by the virtue of prudence plays in the formation and operation of good moral habits— habits in the sphere of action and passion or of the will and the emotions By substituting a number of distinct intellectual virtues for the single term knowledge Aristotle can definitely answer both Yes and No to the question Not all the intellectual virtues not art and science or even speculative wisdom are needed for courage temperance and justice but if by knowledge is meant nothing more than prudence then Aristotle affirms these moral virtues to involve knowledge of a sort

The distinction between moral and intellectual virtue also enables Aristotle to reformulate the problem of the unity of virtue Instead of asking whether there is only one virtue having many aspects or many distinct virtues he considers which virtues are interdependent and which can exist separately from one another Virtue has unity in the inseparability of the moral virtues from one another and from prudence The sailor who appears to be courageous without being temperate or the thief who appears to be prudent without being just has only the appearance of these virtues But though Aristotle uses the phrase perfect virtue to signify both the integration of these virtues and the perfection of each when it is integrated with the others he does not include all the particular virtues in the unity of virtue Some like art and science can exist apart from prudence or the moral virtues and they from it

By showing how all of the moral virtues depend upon prudence or practical wisdom Aristotle thinks he is able to refute the argument that the virtues exist in separation from each other But he does not find any greater unity of the virtues than is involved in their inseparability as a result of their common dependence on prudence Following Aristotle Aquinas criticizes those who assert a more profound unity by claiming that prudence temperance fortitude and justice signify only certain general conditions to be found in all the virtues This according to Aquinas is tantamount to denying that they are distinct habits

Insisting that they are really distinct as habits Aquinas nevertheless suggests that these four virtues qualify one another by a kind of overflow For he explains the qualities of prudence overflow into the other virtues in so far as they are directed by prudence And each of the others overflows into the rest for the reason that whoever can do what is more difficult can do what is less difficult The man who can curb his desires for the pleasures of touch which is a very hard thing to do is more able to check his daring in dan ers of death which is much easier the man who can withstand the dangers of death which is a matter of great difficulty is more able to remain firm against the onslaught of pleasures

As for justice Aquinas holds that legal just ce, by command ng the other virtues draws

them all into the service of the commonweal Aristotle also sees a certain unification of the virtues at least all the moral virtues in terms of justice—the kind of justice he calls general to distinguish it from the special virtue of justice. He conceives general justice as com prising all the moral virtues including special ju tice insofar as all these virtues are directed toward the welfare of society and the good of other men Justice in this sense he writes is not a part of virtue but virtue entire Holding that it is complete virtue not absolutely but in relation to our neighbor he also adds that it is complete because he who possesses it can exercise his virtue not only in himself but towards his neighbor as well

Some writers tend in the opposite direction toward a greater separation of the virtues Jus tice according to Marcus Aurel us is prior to the other virtues for in justice the other vir tues have their foundation In suggesting that a man can secure a favorable and commodious interpretation of his vices by coloring them in the light of his virtues Bacon seems to accept the conjunction of virtue with vice which is expressed in the familiar phrase the defects of one s virtues That a gentleman may with honor be permitted certain failings is similarly impl ed by Dr Johnson s reference to the genteel vices

This comfortable doctrine that a man can be truly virtuous in some aspects of character while vicious in others seems however to be rejected by Montaigne and Kant as well as by Plato and Aristotle The standard of Christian virtue is even more stringent What may ap pear to be virtues are according to Augustine rather vices than virtues so long as there is no reference to God in the matter For although some suppose that virtues which have a refer ence only to themselves and are des red only on their own account are yet true and genuine virtues the fact is that even they are inflated with pride and are therefore to be reckoned vices

The theological virtue of cha ity—the love of God—is held by the theolo ans to be indis pensable to the perfect on of all the other vir tues in a Christian life Not only according to Aquinas do faith and hope lack th perfect character of virtue without ch r ty but all the other virtues are imperfect in its absence

It is possible by means of human works he writes to acquire the moral virtues in so far as they produce good works that are directed to an end not surpassing the natural ability of man And when they are acquired thus they can be without charity even as they were in many of the pagans But in so far as they pro duce good works in relation to a supernatural last end thus they have the character of virtue truly and perfectly and cannot be acquired by human acts but are infused by God Such mor al virtues cannot be without charity Only the infused virtues are perfect and deserve to be called virtues absolutely The other vir tues those namely that are acquired are vir tues in a restricted sense

THAT VIRTUE IS GOOD and vice evil seems to go undisputed in the tradition of the great books even by Machiavelli who bemoans the neces sity of vice in a successful prince But una nimity on this point does not preclude a variety of answers to the question What is the good of virtue?

Is it an end in itself or a means and if a means what end does it serve? Moreover what is the principle of goodness in the virtues? Does it lie in the rule of reason in conformity to na ture in obed ence to the moral law and the im perative of duty in submiss on to God s will? Or are the virtues good only to the extent that they are useful and profitable? To the individ ual alone or to society as well? As these ques tions are differently answered different con *ceptions of virtue appear*

Marcus Aurelius gives the simplest and most familiar answer Virtue is its own reward What more dost thou want the Stoic asks when thou hast done a man a s rvice? Art thou not content that thou hast done someth ng conformable to thy nature and do t thou seek to be paid for it? The virtues are not only self rewarding but they are the only things in which a good man can take delight When thou wishest to delight thyself Aurelius says think of the virtues of those who l ve w th thee For nothing d l ghts so much as the examples of the virtues

Locke seems to make profit or utility the source of goodness in the virtues. God hav

ing by an inseparable connexion joined virtue and public happiness together Locke writes and made the practice thereof necessary to the preservation of society and visibly beneficial to all with whom the virtuous man has to do it is no wonder that everyone should not only allow but recommend and magnify those rules to others from whose observance of them he is sure to reap advantage to himself

The virtue seem to become conventional in Locke s view They are whatever the members of a particular society deem advantageous Virtue and vice are names pretended and supposed everywhere to stand for actions in their nature right and wrong and as far as they are really so applied they are so far co incident with the divine law But yet what ever is pretended Locke adds this is visible that these names virtue and vice in the partic ular instances of their application through the several nations and societies of men in the world are constantly attributed only to such actions as in each country and society are in reputation or discredit Thus the measure of what is everywhere called and esteemed vir tue and vice is the approbation or dislike praise or blame which establishes itself in a society according to the judgment maxims or fashion of that place That this is the common measure of virtue and vice will appear Locke thinks to anyone who considers that though that passes for vice in one country which is counted a virtue or at least not a vice in another yet everywhere virtue and praise vice and blame go together

Hobbes also regards the names of the virtues as inconstant names varying according to the nature disposition and interest of the speaker for one man calleth *wisdom* what another calleth *fear* and one *cruelty* what an other *justice* one *prodigality* what another *magnanimity* Yet this does not prevent Hobbes from proposing a list of virtues which derive their goodness from the natural law All men agree on this he writes that peace is good and therefore also the ways or means of peace which are *justice gratitude modesty equity mercy* and the rest of the Laws of Nature are good that is to say *Moral Virtues* and their contrary *Vices* evil

Moral philosophy according to Hobbes is the science of Virtue and Vice and therefore the true doctrine of the Laws of Nature is the true moral philosophy Though other writers of moral philosophy acknowledge the same virtues and vices Hobbes thinks they do not see wherein consisted their goodness nor that they come to be praised as the means of peaceable sociable and comfortable living

Like Kant he criticizes Aristotle s doctrine of the mean or as Hobbes refers to it the notion that virtue consists in a mediocrity of the passions as if not the cause but the degree of daring made *fortitude* or not the cause but the quantity of a gift made *liberality* The cause of virtue according to Hobbes is the natural law commanding men to do whatever is required for peace and self preservation In terms of a quite different conception of law and duty Kant also says that the difference between virtue and vice cannot be sought in the degree in which certain maxims are followed but only in the specific *quality* of the maxims In other words the vaunted principle of Aristotle that virtue is the *mean* between two vices is false

It is not Kant but Spinoza who seems to bear an affinity to Hobbes in the theory of virtue Both make self preservation the end which determines the direction of virtuous conduct Both consider civil peace or the good of others in relation to self Both draw up lists of moral virtues from their enumeration of the passions Hobbes by reference to natural law Spinoza in terms of adequate ideas of God s nature Spinoza identifies virtue with power and holds that the more each person strives and is able to seek his own profit that is to say to preserve his own being the more virtue does he possess But though he makes the endeavor after self preservation the primary and only foundation of virtue he conceives self preservation itself to have its foundation in knowledge of God

To act in conformity with virtue Spinoza maintains is to act according to the guidance of reason and every effort which we make through reason is an effort to understand and therefore the highest good of those who follow after virtue is to know God that is to say it is a good which is common to all men and can be equally possessed by all in so far as they are of the same nature In direct consequence he

declares that the good which everyone who follows after virtue seeks for himself he will desire for other men and his desire on their be half will be greater in proportion as he has greater knowledge of God

ALL THOSE WHO RELATE virtue to happiness do not do so in the same way The multiplication of happiness writes Mill is according to the utilitarian ethics the object of virtue He at tributes to a very imperfect state of the world s arrangements the fact that anyone can best serve the happiness of others by the absolute sacrifice of his own yet so long as the world is in that imperfect state he goes on to say the readiness to make such a sacrifice is the highest virtue which can be found in man

But Mill repeatedly insists that only an in crease of happiness justifies sacrifice and only its contribution to happiness makes virtue good He criticizes the Stoics for striving to raise themselves above all concern about anything but virtue and for supposing that he who has that has everything No claim of this de scription is made for the virtuous man by the utilitarian doctrine

While admitting that virtue may come to be desired disinterestedly as an ingred ent of hap p ness rather than as a means to it Mill does not regard virtue as a natural and necessary condi tion of happiness Virtue according to the utilitarian doctrine is not naturally and origi nally part of the end but it is capable of becom ing so If there are some who do not desire virtue either because it gives them no pleasure or because the lack of it causes them no pain they can be happy without it

The view taken by Plato and Aristotle seems to be directly contrary All things which have ends appointed by their nature Socrates argues at the beginning of the *R public* must also be capable of virtues or excellences whereby to achieve their ends If happiness is the end of the soul or of human life then we must look to such excellences as the virtue of justice and temperance to provide the means When Gl u con and Adeimantus ask Socrates to prove that only the virtuous man c n be happy he under takes the long analysis of the parts of the soul and the parts of the state to discover the vir tues appropriate to each and to the whole When the virtues are defined Glaucon admits that the question he originally asked has now become ridiculous

The answer to the question is evident as soon as virtue and happiness are seen to be reciprocal notions like cause and effect Yet Aristotle s definition of moral virtue as a habit of choice consisting in a mean—a mean relative to our selves determined by reason or as the prudent man would determine it—does not immediately explain why happiness is defined as the reali zation and perfect exercise of virtue The con nection between virtue as means and happiness as end becomes apparent only in terms of the conception that happiness is the ultimate end *because* it includes all good things and leaves nothing to be desired

As an object of desire as something worth having in itself virtue is only one type of good It does not constitute happiness Happiness according to Aristotle includes as well such bodily and external goods as health and pleasure friendship and wealth But unlike these other goods the virtues alone are capable of produc in happiness because in Aristotle s view they are the causes of our thinking and acting well with respect to all other goods

We do not acquire or preserve virtue by the help of external goods Aristotle says but ex ternal goods by the help of virtue This ap plies to health and pleasures no less than to wealth and friends Because the moral virtues together with prudence direct our desires de termine our choices and govern our actions in accordance with reason s discrimination be tween real and apparent goods the exercise of these habits results in happiness or living well But since external goods are goods of fortune and not entirely within our control Aristotle finds it necessary to qualify the definition of happiness To the statement that the happy man is one who is active in accordance with complete virtue he adds that he is one who is suffic ently equipped with external goods not for some chance period but throughout a complete life

Accord ng to Kant the conn xion of virtue and happ ness may be understood in t o vays either the endeavor to be virtuous and tl e ra tional pursu t of happ ness a not two distinct action but absolutely id ntical or the con

nexion consists in this that virtue produces *happiness as something distinct from the con sciousness of virtue* as a cause produces an ef fect Kant thinks that both the Stoic and Epicurean doctrines choose the first of these alternatives They differ from each other in his opinion only in the way they conceive the identity of virtue and happiness The Epicu rean notion of virtue he writes was already involved in the maxim to promote one s own happiness According to the Stoics on the other hand the feeling of happiness was already con tained in the consciousness of virtue

Kant s own resolution of what he calls the *antinomy of practical reason* seems to depend on his conception of the *summum bonum* For him it is not happiness it consists rather in be ing worthy of happiness through doing one s duty Morality he says is not properly the doctrine how we should *make* ourselves happy but how we should become *worthy* of happi ness Under the moral law to be happy is not a duty but to be worthy of happiness is In Kant s view therefore virtue is related to hap piness through the medium of duty Virtue he declares is a coincidence of the rational will with every duty firmly settled in the charac *ter* It is *the moral strength of a man s will* in his obedience to duty

But in addition to being the will s strength in overcoming obstacles— the natural inclina tions which may come into conflict with the moral purpose —virtue or rather the impera tive which commands the duty of virtue in cludes besides the notion of constraint that of an end Not an end that we have Kant ex *plains but one that* we ought to have an end which therefore pure practical reason has in itself whose highest unconditional end (which however continues to be a duty) con sists in this that virtue is its own end and by deserving well of men is also its own reward

The issue between Kant and Aristotle con cerning the good of virtue as a means or an end involves the whole of their moral philosophy It goes to the central conflict between their fun damental principles which is discussed in the chapters on Duty and Happiness Fundamen tal differences in political philosophy also arise from different views of virtue in relation to the forms of government and the ends of the *state*

The ancients for example define aristocracy in terms of virtue The point is not only that aristocracy is a form of government in which the few who are most virtuous rule it is also that form of government the principle of which is virtue as liberty is the principle of democracy and wealth of oligarchy Montesquieu makes virtue the principle in republican government in contrast to honor as the principle in mon archies and fear in despotism What I distin guish by the name of virtue in a republic he explains is the love of one s country—that is, *the love of equality It is not a moral* nor a Christian but a political virtue and it is the spring which sets republican government in motion as honor is the spring which gives mo tion to monarchy Since for Montesquieu both democracy and aristocracy are forms of republican government the former rests on virtue as much as the latter

Agreeing that the conditions Montesquieu sets for republican government *could not* exist without virtue Rousseau criticizes him for failing to see that the sovereign authority being everywhere the same the same principle *should be found in every well constituted* state in a greater or less degree it is true accordin to the form of government So for Mill virtue defines the aim of good government itself with out respect to particular forms The most im portant point of excellence which any form of government can possess he writes is to pro mote the virtue and intelligence of the people themselves

The virtues which a government *promotes*, however may be those of the good cit zen rather than the good man This distinction be tween civic and moral virtue occupies the an cients *related as it is to the problem of the* vir tuous man living in a bad society—a problem which Socrates actually faces as well as dis cu ses in the *Apology* and the *Crito*

The virtue of the citizen Aristotle writes, must be relative to the constitution of the state of which he is a member Hence it is evident that the good citizen need not of neces sity possess the virtue which makes a good man Yet *in some states* the good man and the good citizen are the same

In this vein Aquinas considering whether the laws should try to make men good says of a tyrannical or unjust law that in so far as it has something of the nature of law its aim is that the citizens be good At least it aims at being obeyed by them and this he adds is to make them good not absolutely but with respect to that particular government But Aquinas also contemplates the need for disobeying a civil ordinance if it demands too great a sacrifice of virtue by requiring the citizen to violate the natural or the d vine law As Rousseau later says a man s duty takes precedence over that of a citizen

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and pa e numbers of the passages referred to For example in 4 HO IER *Iliad* BK II [265 83] 12d the number 4 is the number of the vol me in the set the number 12d ind cates that the pas sage is in section d of page 12

PAGE SECTIONS When the text is printed in one c lumn the letters a and b refer to the upper and lower halves of the pa e For example in 53 JA IES *Psychology* 116a 119b the passa e begins in the upper half of pa e 6 and ends in the lo r half of page 119 When the text is p inted n t o columns the letters a and b refer to the upper and lower hal es of the left hand side of the page the letters c and d to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Sympos m* 163b 164c the passage begins in the lowe half of the left hand s de of page 163 and ends in the upper half of the right hand side of page 164

Chapter 98 WAR AND PEACE

INTRODUCTION

THE twentieth century may go down in history as the century of war and peace—the first in which world wars were fought, the first in which men established world peace, and so perhaps the last in which peace among nations was merely an armed truce, a breathing spell between wars. Even if world peace is not actually begun in our time, we may prove to be the first generation of men on earth who, under the impact of world wars, have made a firm attempt to draw a decisive conclusion from all the accumulated wisdom concerning war and peace.

It may be thought that antiquity anticipates and that at all times the tradition contains the fundamental notions which have recently gained so wide a currency. Socrates and Epictetus, for example, speak of world citizenship. Marcus Aurelius and Zeno the Stoic even more explicitly envision a world community. Alexander tries to conquer the world to make it one. Virgil proclaims a peace which will be as universal as the Roman empire, and Dante, recasting Virgil's vision, advocates the re-enactment of that empire and with it monarchy—by which he means *one* government—to give all Christendom political as well as spiritual unity.

To neglect these anticipations would be to overlook wisdom's perennial aspirations for unity. But if, because of their significance for peace, they should not be neglected here, neither should their importance be exaggerated. For one thing, man has always acted at variance with his wisdom, nullifying the hope of peace by preparing always for the next war. For another thing, it is doubtful that peace by conquest or by empire—the only ways in which the past could conceive the world's coming to the unity of peace—would be a peace perpetual as well as universal. The latter without the former is but a fraction of the ideal.

Even when in modern times the ideal is at last stated in terms of peaceful methods for achieving peace—by law, not by force; by consent, not by imposition—something less than the whole world in its global reality is the object of consideration. William Penn and Rousseau, for example, state the indispensable legal conditions for turning Europe from a continent perpetually wracked by wars into a society able to perpetuate peace, but their historical location causes them to limit their proposals to Europe.

Kant alone first makes the generalization which lies dormant in their reasoning and which almost begs to be inductively drawn from the conceptions of war and peace so plainly stated by Hobbes and Locke. He conceives the possibility of a peace not only perpetual but truly world wide. Yet for all the rightness he perceives in what he calls "the cosmopolitical ideal," it seems to remain for him an ideal—not attainable except by approximation. Yet because it is right, he holds that it must be pursued even though it is impossible. We are the first generation to argue for world peace as a conclusion on the level of reality and to conclude that it is possible because it is necessary.

The argument is not yet won, nor the conclusion enacted, but henceforth the problem of war and peace can hardly be discussed without stating the issue as a choice of world government and peace, or of world anarchy and war. If it does no more than seriously face that choice for the first time, the twentieth century makes a signal advance in understanding one of the great ideas—an advance which can change the course of history and the life of man more than the discovery of atomic fission, which is only an instrument of war or a tool of peace. But just as the release of heat and energy from nuclear combustion has its prototype in ordinary fire which the ancients associate with the beginning

of civilization so the insight which may exert a new civilizing force has its origin in the fundamental thinking man does about war and peace as soon as he begins to think about society

IN THE TRADITION OF the great books war and peace are usually discussed in political terms or at least in terms of the relation of men to one another individually or in groups But the psychologist the moralist and the theologian sometimes use the word peace in another sense to signify the absence of conflict within the individual or to signify an inner harmony—peace of mind on earth or the heavenly rest of the blessed in the presence of God

In their spiritual meanings war and peace are considered in other chapters *e g* interior conflict is a topic in the chapter on OPPOSITION and interior peace is discussed in the chapter on HAPPINESS We shall not treat these matters here except in their bearing on the social or political discussion nor shall we consider civil war except for the light it throws on the nature of war and peace in general. The special problem of discord and strife within a single community belongs to the chapter on REVOLUTION

Certain attitudes toward war between states seem to recur in every century In the face of the ever present fact of war men deplore its folly or find some benefit to compensate for its devastation But throughout most of the tradition those who see only suffering no less than those who celebrate the martial spirit seem to accept the necessity of war Good or bad or a mixture of the glorious and the horrible war seems to most of those who write about it an inevitable thing—as ineradicable as disease and death for the living body as inescapable as tragedy Only in recent times has the inevitability of war been questioned and the possibility of lasting peace proposed

The two books which look most steadily and searchingly on the face of war—Homer s *Iliad* and Tolstoy s *War and Peace*—seem to behold it as a mixed thing Battle with sword and javelin on the plains of Troy or with musket and howitzer on the Russian steppes lets loose a fury which sweeps human nature to extremes of nobility and baseness to actions of heroic strength and cringing weakness To both Homer and Tolstoy war is the realm of force and chance and though both see in it occasions for courage and magnanimity and even for a kind of charity or at least compassion the whole spectacle is one of agony pervaded by darkness and dismay *torn bodies and ruined minds* Grievous war is Homer s repeated epithet Pale fear and black death are the colors of battle They are everywhere that Ares reigns Ares blood stained bane of mortals stubborn god of war

To the poet of any century Homer or Tolstoy Virgil or Shakespeare war s human features appear to be unchanged even if its mechanical dress and physical lineaments are altered—its weapons and armor its organization of men and materials its scope of operations in space and time The historian who measures the contestants and keeps the score of victories and defeats takes a different view He dwells on all the differences which mark progress in the art of war or which enable wealthier and more advanced societies to wage wars of greater magnitude To Herodotus no military undertaking ever assumed the proportions of Xerxes army on the march raising a cloud of dust from horizon to horizon Yet Thucydides says that before the Peloponnesian War there was nothing *on a great scale either in war or in other matters*

The historian is attentive not only to weights and numbers to the changing accoutrement of war and its mechanical elaboration but also to inventions in the sphere of strategy and tactics The Alexandrian phalanx the patience of Fabius the forced marches of Caesar Hannibal s outflanking and enveloping movements at the *battle of Cannae the deployment in depth of* the Roman legions on the Rhine—these are but a few of the inventions of military genius which as Plutarch Tacitus and Gibbon recognize have an effect far beyond the advantage that novelty initially gives them They become the classical models of war s art and the *principles* of its science

Tolstoy may scoff at the historians who stand in awe of military genius He may be r— that Kutuzov s lack of plans rather than Napoleon s a r of outw tting all contingencies is the essence of great generalsh p Nevertheless Tolstoy mag n f es the campaign of 181 as beyond comparison the g eatest mass moveme of humanit

from west to east and then from east to west just as Herodotus apotheosizes the movement of the Persian horde from east to west and Thucydides the rise of Athenian naval power

Writing from the center of a whole continent in arms a century later Freud in 1915 gives his impression of what was yet to become the first world war A war of such proportions and ferocity was almost incredible before it happened Then the war in which we had refused to believe broke out and Freud writes not only is it more sanguinary and more destructive than any war of other days because of the enormously increased perfection of weapons of attack and defense but it is at least as cruel as embittered as implacable as any that preceded it It tramples in blind fury on all that comes in its way as though there were to be no future and no goodwill among men after it has passed It rends all bonds of fellowship between the contending peoples and threatens to leave such a legacy of embitterment as will make any renewal of such bonds impossible for a long time to come

THE ENEMIES OF WAR use a variety of weapons in their attack The *Trojan Women* of Euripides cries out with the bitterness of Andromache and Hecuba against the misery of war s innocent victims—the women and children who are left to mourn the vanquished or to become the victors spoils Aristophanes turns laughter rather than pity and fear against the waste of war Such comedies as the *Peace* the *Acharnians* the *Lysistrata* make light of the issues over which men fight and give war the aspect of a wearisome business preposterous in its motives and hollow in its victories

The genial satire of Rabelais exposes the impostures of war but beneath the horseplay which deflates by its exaggeration there is the earnest serious note of Grangousier s resolution not to undertake war until I have first tried all the ways and means of peace Swift s satire is not so amiable In the eyes of the truly rational Houyhnhnms war appears to be as senseless and despicable as the Yahoos who wage it Gulliver tries to tell the Houyhnhnm who is his master about the wars of Europe their causes and their cost I was going on to more particulars he relates when my master commanded me silence He said whoever understood the nature of the Yahoos might easily believe it possible for so vile an animal to be capable of every action I had named if their strength and cunning equalled their malice When a creature pretending to reason could be capable of such enormities he dreaded lest the corruption of that faculty might be worse than brutality itself He seemed therefore confident that instead of reason we were only possessed of some quality fitted to increase our natural vices

According to Augustine it is not man s nature but his sinfulness which degrades him below the beasts devoid of rational will who live more securely and peaceably with their own kind than men For not even lions or dragons have ever waged with their kind such wars as men have waged with one another Calling it the greatest and most pompous of human actions Montaigne asks whether war is not the testimony of our weakness and imperfection for, in truth the science of undoing and killing one another and of ruining and destroying our own kind has nothing in it so tempting as to make it coveted by beasts who have it not

But in his essay *Of Ill Means Employed to a Good End* Montaigne also quotes Juvenal s remark that we suffer the ills of a long peace luxury is more pernicious than war He seems to approve the Roman policy of maintaining wars not only to keep their own men in action for fear lest idleness the mother of corruption should bring upon them some worse inconvenience but also to serve for a bloodletting to their Republic and a little to evaporate the too vehement heat of their youth War as a purgative is a familiar theme Hobbes like Malthus later suggests that when all the world is overcharged with inhabitants then the last remedy of all is war which provideth for every man by victory or death

Many writers seem to be ambivalent about war Plato for example seems to see both sides of the question though he does not give them equal weight In the *Republic* Socrates proclaims the discovery that war is derived from causes which are also the causes of almost all the evils in states private as well as public In the *Laws* the Athenian Stranger admits to Cleinias the Cretan that the laws of his city devised

primarily with a view to war can be justified insofar as they aim at courage but he reminds him later that insofar as such laws regarded a part only and not the whole of virtue I disapproved of them

That he regards permanent peace as the ideal toward which the moral law commands us to strive does not prevent Kant from saying that a prolonged peace favours the predominance of a mere commercial spirit and with it a debasing self interest cowardice and effeminacy and tends to degrade the character of the nation Nor is war to be absolutely condemned Provided it is conducted with order and a sacred respect for the rights of civilians war itself says Kant has something sublime about it and gives nations that carry it on in such a manner a stamp of mind only the more sublime the more numerous the dangers to which they are exposed and which they are able to meet with fortitude Yet even while thinking that war can be a spur for developing to the highest pitch all talents that minister to culture Kant reflects that the underlying purpose of war may be to prepare the way for a rule of law govern in the freedom of states and thus bring about their unity in a system established on a moral basis

Hegel alone is not ambivalent Not only is war not to be regarded as an absolute evil but it is according to Hegel a necessary corrective for the corrosive influence of peace War is a state of affairs he writes which deals in earnest with the vanity of temporal goods and concerns—a vanity at other times the common theme of edifying sermonizing War has the higher significance that by its agency as I have remarked elsewhere the ethical health of peoples is preserved in their indifference to the stabilization of finite institutions just as the blowing of the winds preserves the sea from foulness which would be the result of a prolonged calm so also the corruption in nations would be the product of prolonged let alone perpetual peace

Far from agreeing with those who advocate perpetual peace as an ideal towards which humanity should strive Hegel points out that in peace civil life continually expands all its departments wall themselves in and in the long run men stagnate As a result of war nations are strengthened and people involved in civil strife also acquire peace at home through making wars abroad

To Prince Andrew in *War and Peace* who says that the aim of war is murder the methods of war are spying treachery and their encouragement or to Freud who says that the warring state permits itself every such misdeed every such act of violence as would disgrace the individual man Hegel has an answer States are not private persons he says but completely autonomous totalities in themselves and so the relation between them differs from a moral relation and a relation involving private rights The relation between states is a relation between autonomous entities which make mutual stipulations but which at the same time are superior to these stipulations

Self interest or a will for its own welfare pure and simple is according to Hegel the highest law governing the relation of one state to another Therefore when politics is alleged to clash with morals the doctrine propounded rests on superficial ideas about morality the nature of the state and the state s relation to the moral point of view

IN HEGEL S VIEW wars occur when the necessity of the case requires He is not alone in thinking war inevitable but others who think the same do not do so in the same mood or with the same opinion of the reason for its inevitability Drain the blood from men s veins declares Prince Andrew s father and put in water instead then there will be no more war! It is an illusion Freud thinks to suppose that civilization so transforms human nature as to lift it above the impulses of war In war he says our fellow citizens have not sunk so low as we feared because they have never risen so high as we believed The sad fact he concludes is that war is not to be abolished so long as the conditions of existence among the nations are so varied and the repulsions between peoples so intense there will be there must be wars

William James finds the human race as bellicose as its individual members are instinctively pugnacious and Alexander Hamilton says that if w judge from the history of mankind we shall be compelled to conclude that the fiery

and destructive passions of war reign in the human breast with much more powerful sway than the mild and beneficent sentiments of peace and that to model our political systems upon speculations of lasting tranquility is to calculate on the weaker springs of human character

To the extent that even those who deplore war despair of lasting peace Machiavelli may not be too cynical a realist when he advises the prince that he ought to have no other aim or thought nor select anything else for his study than war and its rules and discipline When princes have thought more of ease than of arms they have lost their states The prince ought never therefore to have out of his thoughts this subject of war and in peace he should addict himself more to its exercise than in war The prince who delays in order to save himself from war makes a serious mistake War Machiavelli tells him is not to be avoided but is only deferred to your disadvantage

Like Machiavelli Cleinias the Cretan in Plato s *Laws* justifies his city s constant preoccupation with war or preparation for war The world is foolish he thinks in not understanding that all men are always at war with one another For what men in general term peace [is] only a name in reality every city is in a natural state of war with every other not indeed proclaimed by heralds but everlasting

Both Plato and Aristotle seem to agree that war is somehow rooted in the nature of things —in the nature of men and the nature of cities Yet both also look upon war as transitory even if recurrent No one can be a true statesman the Athenian Stranger tells Cleinias who looks only or first of all to external warfare nor will he ever be a sound legislator who orders peace for the sake of war and not war for the sake of peace The whole of life according to Aristotle is divided into two parts business and leisure war and peace There must be war for the sake of peace business for the sake of leisure things useful and necessary for the sake of things honorable Men must be able to engage in business and go to war but leisure and peace are better they must do what is necessary and indeed what is useful but what is honorable is better

But how does war produce peace? One answer may be Tristram Shandy s that as war begets poverty poverty peace Another may be Virgil s In the opening book of his *Aeneid* Jove predicts the coming of a Caesar destined to bound with ocean his domain as with the stars his glory When at last Rome has conquered the world the golden age of peac —or at least the *pax Romana*—will supplant war s age of iron Then war shall be laid aside and the harsh world soften to peace the accursed gates of Battle shall be shut with iron bar and clenching bolt and godless Frenzy shall sit within upon the weapons of savagery

In accordance with this heaven laid destiny Anchises bids his son Aeneas to make war for the sake of peace Roman be this thy care—these thine arts—to bear dominion over the nations and to impose the law of peace to spare the humbled and to war down the proud[1] But some of the proud who are subjugated by Rome s legions take a different view of the peace that is imposed by force of arms Tacitus reports the speech of the British chieftain Galgacus in which he refers to those terrible Romans from whose oppression escape is vainly sought by obedience and submission To robbery slau h ter plunder they give the lying name of empire they create a wilderness and call it peace

Augustine more soberly reflects on the inevitable frustration of the Roman kind of peace The imperial city he writes has endeavored to impose on subject nations not only her yoke but her language as a bond of peace How many great wars how much slaughter and b ood shed have provided this unity And thou h these are past the end of these miseries has not yet come For though there have never been wanting nor are yet wanting hostile natio s beyond the empire against whom wars have been and are waged yet supposing there were no such nations the very extent of the empir itself has produced wars of a more obnoxious description—social and civil wars—and with these the whole race has been agitated either by the actual conflict or the fear of a renewed outbreak

Despite his perception of war s failures despite his enjoining the wise men not merely to wage but to lament the necessity of just wars, Augustine holds that it is with the desire for

peace that wars are waged Every man seeks peace by waging war but no man seeks war by makin peace For even they who intentionally interrupt the peace in which they are living have no hatred of peace but only wish it changed into a peace that suits them better Even tho e whom they make war against they wish to make their own and impose on them the laws of their own peace

Peace accord ng to Augustine consists in harmony and concord Peace between man and man is well ordered concord Domestic peace is the well ordered concord between those of the family who rule and those who obey *Civil peace is a similar concord among the citi zens* The peace of all things is the tranquil lity of order Without disagreeing essentially Aquinas explains that peace involves more than concord Wherever peace is he says there is concord but there is not peace wherever there is concord if we give peace its proper meaning The peace between men may con sist in concord not indeed any kind of con cord but that which is well ordered through one man agreeing with another in respect of something befitting to them both For if one man agree with another not of his own accord but through being forced such concord is not really peace

For men to be at peace with one another Aqu nas bel eves each must be at peace with himself but man s heart is not at peace so long as he has not what he wants or if having what he wants there still remains something for him to want This accord ng to Aquinas explains why Augustine defined peace not sim ply as concord but as *the tranquillity of order* for by tranquillity is meant all the desires of each ind vidual man being set at rest togeth er It also explains why those who seek war and dissension desire nothing but peace which they deem themselves not to have For Aqui nas reminds us there is no peace when a man enters into concord with another counter to what he would prefer Consequently men seek by means of war to break this concord because it is a defective peace in o der th t they may obtain peace where noth ng s contrary to their w ll Hence all wars are v ged th t men may find a more pe fect peace than that which they had heretofore

The fundamental insight here seems to be that though charity or love produces the unity of peace peace is also the work of justice — indirectly as Aquinas says insofar as justice removes the obstacles to peace Thucydides gives us an historian s confirmation of the theo logian s point He tells us why he considers the long truce or armistice—a period of no actual fighting—to be a part of the war Only a mis taken judgment he writes can object to including the interval of treaty in the war Looked at by the light of facts it cannot it will be found be rationally considered a state of peace where neither party either gave or got *back all that they had agreed upon*

To the same effect is the speech of Hermoc rates the Syracusan which Thucydides reports That war is an evil is a proposition so familiar to everyone that it would be tedious to develop it No one he declares is forced to engage in it by ignc rance or kept out of it by fear if he fancies there is anything to be gained by it

I suppose that no one will dispute that we went to war at first in order to serve our several interests that we are now in view of the same interests debating how we can make peace and that if we separate without havin as we think our rights we shall go to war again

THUCYDIDES OBSERVATION THAT periods of ar mistice or truce are part of war and the remark of Clemias in Plato s *Laws* that every city is in a natural state of war with every other may anticipate Hobbes but full clarity on the point is not reached until Hobbes explicitly distin guishes between war as battle and the state of war which always prevails between men or na tions when they do not live together under a common government

War consisteth not in battle only Hobbes explains or in the a t of fighting but in a tract of t me wherein the will to contend by battle is sufficiently known and therefore the notion of time is to be considered in the nature of war as it is in the nature of weather For a the na ture of foul weather lyeth not in a sho v r or two of rain but in n incl nat on th reto of many days together o the nature of War con si teth not n actual fighting but in the known dispos t on th eto dur ng all the time there

is no assurance to the contrary All other time is Peace

Hobbes does not exclude from the condition of peace differences between men or even discord but only fighting or the need to resort to fighting as a way of settling differences or resolving conflicts He is cognizant of the distinction which Machiavelli paraphrases from Cicero There are two ways of contesting Machiavelli writes the one by law the other by force the first method is proper to men the second to beasts Here Machiavelli adds the comment that because the first is frequently not sufficient it is necessary to have recourse to the second But Hobbes does not think it is always necessary At least there is a cure for the war of every man against every man That cure is the formation of a commonwealth and the institution of government with sufficient coercive force to maintain law and secure peace Anarchy and the condition of war according to Hobbes are one and the same a condition in which each man being a law unto himself and judge in his own case must of necessity resort to force if he would impose his will upon or resist the will of another

Since men are everywhere found in societies living under law and government it might seem that the universal state of war to which Hobbes refers is now abolished Not so according to Hobbes for though there had never been a time wherein particular men were in a condition of war one against another yet in his opinion in all times kings and persons of sovereign authority because of their independency are in continual jealousies and in the state and posture of gladiators having their weapons pointing and their eyes fixed on one another that is their forts garrisons and guns upon the frontiers of their kingdoms and continual spies upon their neighbors which is a posture of War

This notion that sovereigns are always in a state of war with one another—because being sovereigns they are autonomous *i e* not subject to any superior government—seems to be accepted by most of the great political writers who come after Hobbes The point is sometimes differently formulated but the basic insight remains essentially the same

Locke for example makes a threefold distinction between the state of nature which is anarchy or complete independence the state of war in which force without authority is resorted to by men to settle their differences and the state of civil society which provides law and government for the arbitration of disputes

Civil society he writes is a state of peace amongst those who are of it from whom the state of war is excluded by the umpirage which they have provided in their legislative for the ending all differences that may rise amongst any of them

Since Locke holds that want of a common judge with authority puts all men in a state of nature it follows for him that thou h the state of nature and the state of war may not be identical the state of nature unlike that of civil society inevitably lapses into the state of war If in a state of nature men fail to settle their differences by reason they enter into the state of war which is the realm of force or a declared design of force where there is no common superior on earth to appeal to for relief

With these qualifications Locke not only agrees with Hobbes that all princes and rulers of independent governments all throu h the world are in a state of nature but also draws from this the same implication for war and peace Since the whole community is one body in the state of nature in respect of all other states or persons out of its community Locke argues that the government of each state must have the power of war and peace leagues and alliances in relation to everything external to itself

Montesquieu and Rousseau slightly alter Hobbes point by attributing the origin of war itself to the existence of separate societies War writes Rousseau is a relation not between man and man but between State and State Because they are in a state of nature among themselves bodies politic experience in his opinion the inconveniences which had obliged individuals to forsake it Hence arose national wars battles murders and reprisals which shock nature and outrage reason

Hegel s ultimate reason for thinking that war is ineradicable seems to be not merely that sovereign states are in a state of nature in relation to each other but that they must always re-

main so There is no Praetor to judge between states he writes at best there may be an arbitrator or a mediator and even he exercises his functions contingently only i e in dependence on the particular wills of the disputants

That is why Hegel dismisses Kant s idea for securing perpetual peace by a League of Nations to adjust every dispute This idea Hegel writes presupposes an accord between states this would rest on moral and religious or other grounds and considerations but in any cas would always depend ultimately on a particular sovereign will and for that reason would remain infected with contingency Hence he concludes if states disagree and their particular wills cannot be harmonized the matter can only be settled by war

KANT AGREES THAT in the absence of what he calls a cosmo-political con titution or world state *war* is inevitable In their external relations to one another states like lawless savages are naturally in a non juridical condition and this according to Kant is a state of war in which the right of the stronger prevails and although it may not in fact be always found as a state of actual war and incessant hostility yet the condition is wrong in itself in the highest degree and the nations which form States contiguous to each other are bound mutually to pass out of it

How shall this be accomplished? Is Kant s idea the one Hegel attributes to him? Is the alliance of nations of which he speaks to be a league of nations or does he have something more than that in m nd when he says that this mutual connection by alliance must take the form of a Federation ?

On the one hand he calls for a universal Union of States analo ous *to that by which a* Nation becomes a State and argues that it is only thus that a real *state of Peace* could be establ shed But on the other he explains that he means only a voluntary comb nation of d f ferent States that would be *dissoluble* at any time and not such a union as is embodied in the United States of America founded upon a pol tical constitution and therefore indissoluble

The arguments for the federal constitution of the United States help to make this issue clear The authors of the Constitution regard it as providing a more perfect union than the Articles of Confederation under which the thirteen separate colonies are banded together by little more than treaties or alliances To the writers of *The Federalist* who advocate the adoption of a federal union to replace the loose confederacy or league of states there is no middle ground between the establishment of peace through federal union and the continuation of the state of war between separate states

A man must be far gone in Utopian speculations Hamilton declares who can seriously doubt that if these States should either be wholly disunited or only united in partial confederacies the subdivisions into which they might be thrown would have frequent and violent contests with each other To look for a continuation of harmony between a number of independent unconnected sovereignties in the same neighborhood would be to disregard the uniform course of e ents and to set at defiance the accumulated experience of ages In another paper Hamilton admits that there is nothing absurd or impracticable in the idea of a league or alliance between independent nations for certain defined purposes precisely stated in a treaty but he thinks that Europe has tau ht an instructive but afflicting lesson to mankind how little dependence is to be placed on treaties which have no other sanction than the obligations of good faith

He returns therefore to attack the visionary or designing men who stand ready to advocate the paradox of perpetual peace between the States though dismembered and alienated from each other What reason have we to expect he asks pea e and cordiality between the members of the present confederation in a state of *separation ? It seems to him an established* truth that the several states in th case of dis un on ould be subject to those vicissitudes of peace and war or fr endship and enmity with each other which have fallen to the lot of all neighboring nations not united under one government

The Federalists do not seriously recommend their prescription for peace as a plan for the whole world Yet they see the generalization that is impl cit in all their reasoning Happy would it be Mad son says if such a remedy

for its infirmities could be enjoyed by all free governments if a project equally effectual could be established for the universal peace of mankind!

John Stuart Mill writing somewhat later and in the light of the experience of American federation as a peace plan seems to be even less ready to propose world federal government as the indispensable condition of world peace He has no doubt that federal union puts an end to war and diplomatic quarrels But he does not think that abrogating the distinction between fellow countrymen and foreigners by making them all fellow citizens of an encompassing state—an object which is one of the worthiest to which human endeavor can be directed —can in the present state of civilization be promoted by keeping different nationalities of anything like equivalent strength under the same government

Not only does Kant definitely dismiss the notion of a world union formed along American lines but even that less perfect union of states which would have the form of a *Permanent Congress of Nations* seems to him an impracticable idea in the world as it is at the end of the eighteenth century With the too great extension of such a Union of States over vast regions he writes any government of it and consequently the protection of its individual members must at last become impossible and thus a multitude of such corporations would again bring round a state of war

Nevertheless Kant refuses to yield completely to this conclusion The morally practical reason he affirms utters within us its irrevocable *Veto There shall be no War* Hence the question no longer is as to whether Perpetual Peace is a real thing or not a real thing or as to whether we may not be deceiving ourselves when we adopt the former alternative but we must *act* on the supposition of its being real We must work for what may perhaps not be realized and thus we may put an end to the evil of wars which have been the chief interest of the internal arrangements of all States without exception

And in his *Idea of a Universal History on a Cosmo Political Plan* Kant does more than urge upon us our moral duty to work for perpetual peace as prerequisite to the highest political good He engages in prophecy He pictures the nations of the world after many devastations overthrows and even complete internal exhaustion of their powers as driven forward to the goal which Reason might well have impressed upon them even without so much sad experience This is none other than the advance out of the lawless state of savages and the entering into a Federation of Nations

However visionary this idea may appear to be it is nevertheless the inevitable issue of the necessity in which men involve one another

THE ARGUMENT FOR WORLD GOVERNMENT as the means to world peace is nowhere made in the great books as explicitly as in Dante s *De Monarchia* Wherever there can be contention Dante writes there judgment should exist otherwise things should exist imperfectly without their own means of adjustment or correction Between any two governments, neither of which is in any way subordinate to the other contention can arise either through their own fault or that of their subjects This is evident Therefore there should be judication between them And since neither can know the affairs of the other not being subordinate (for among equals there is no authority) there must be a third and wider power which rules both within its own jurisdiction

This third power Dante continues is either the world government or it is not If it is we have reached our conclusion if it is not it must in turn have its equal outside its jurisdiction and then it will need a third party as a judge and so *ad infinitum* which is impossible So we must arrive at a first and supreme judge for whom all contentions are judicable either directly or indirectly Therefore world government is necessary for the world Aristotle according to Dante saw this argument when he said Things hate to be in disorder but a plurality of authorities is disorder therefore authority is single But Aristotle certainly did not draw the conclusion that a single government embracing all mankind should be instituted so that by common law it might lead all toward peace Nor with the exception of Kant does any other great author argue to this conclusion But as we have seen Kant unlike

Dante reaches this conclusion only to qualify his acceptance of it and his advocacy of world government

Nevertheless several of the great books do contain the nerve of the argument It is contained in one fundamental proposition that is variously enunciated by Hobbes and Locke Rousseau and the Federalists That proposition is *As anarchy leads to war government establishes peace and just laws preserve it* By inductive generalization it seems to follow that if local peace depends on local government world peace depends on world government

But if except for Dante and Kant no one until the present made this inference the tradition of western thought does include not only the essential premise for making the inference but also the controlling vision of a politically united humanity—all men as fellow citizens in a single political society embracing the earth

Kant speaks of the right of man as a citizen of the world to *attempt* to enter into communion with all others Epictetus says there is but one course open to men to do as Socrates did never to reply to one who asks his country I am an Athenian or I am a Corinthian but I am a citizen of the universe

Reflecting on the fact that man s nature is rational and social Marcus Aurelius declares My city and my country so far as I am Antoninus is Rome but so far as I am a man it is the world If we look at what value every thing has with reference to the whole we will perceive that man is a citizen of the highest city of which all other cities are like families The reason which is common to all men dictates a common law of human life If this is so Aurelius argues we are fellow citizens if this is so we are members of one political community if this is so the world is in a manner a state

Aristotle describes how the family is formed by the union of man and wife parents and children and from this first of all social units the tribe or village is formed by a union of families and the city or state by a union of villages He does not carry this series on to its natural terminus but Augustine does After the state or city Augustine says comes the world the third circle of human society—the first being *the family the second the city*

Yet Augustine who orders earthly peace to the peace of heaven does not prophesy a single political community of all men living together under one government The heavenly city he says while it sojourns on earth calls citizens out of all nations and gathers together a society of pilgrims of all languages not scrupling about diversities in the manners laws and institutions whereby earthly peace is secured and maintained but recognizing that however various these are they all tend to one and the same end of earthly peace

One and the same end of earthly peace may require one city of man as well as one city of God That according to Dostoevsky seems to be implied in the fact that the craving for universal unity is the third and last anguish of men Mankind as a whole he writes has always striven to organize a universal state There have been many great nations with great histories but the more highly developed the more unhappy they were for they felt more acutely than other people the craving for world wide union

OUTLINE OF TOPICS

Chapter 99 WEALTH

INTRODUCTION

IF the only questions about wealth concerned the means of getting and keeping it the causes of its increase and decrease the idea of wealth would be confined to economics The end of the medical art is health writes Aristotle in the *Ethics* and that of economics wealth But as the *Ethics* indicates the moralist and the statesman are also concerned with health and wealth—not simply as things to get and keep but in relation to all other goods and as constituents of the good life and the good society What is regarded as the end in economics may be only a means in ethics and politics in which case Aristotle suggests the latter sciences subordinate economics even as politics subordinates military strategy and military strategy the making and use of armaments

The discussion of riches in the tradition of the great books exhibits these two ways of considering wealth The Bible the poets historians and philosophers deal with wealth as a factor in the life of men and societies They scrutinize the desire for wealth or the love of money in relation to sin and virtue They raise questions of justice concerning the distribution of wealth the rights of property and fairness in exchange —in buying and selling borrowing and lending and in compensating the laborer They describe the effect of poverty and prosperity or opulence upon states and prescribe the attitude which individual men as well as societies should take toward wealth and poverty

Throughout it seems to be assumed that wealth is merely a means however important or indispensable Though wealth may also be viewed as an end when the problem is one of how to acquire produce or increase it the fact that when possessed it should be treated as a means leads the moralist to condemn not only the miser the hoarder or the man who devotes his whole life to making money but also those who elevate wealth into the sort of end which justifies any means that can advance its pursuit

The other approach is that of the economist Two of the great books—Smith s *Wealth of Nations* and Marx s *Capital*—deal not with wealth as a means but with the means to wealth A third though by title *A Discourse on Political Economy* is concerned with the principles of government and with wealth only insofar as in Rousseau s conception government includes the administration of property as well as the protection of persons Provision for the public wants he writes is the third essential duty of government

Rousseau explains the title of his treatise by reference to the etymology of the word economy which meant originally only the wise and legitimate government of the household for the common good of the whole family It is in this sense that Aristotle employs the word and that a work sometimes attributed to him bears it as the title The meaning of the term Rousseau goes on was then extended to the government of that great family the State To distinguish these two senses of the word the latter is called *general* or *political* economy the former domestic or particular economy

Adam Smith uses the term more narrowly Not only does he limit his inquiry to the nature and causes of wealth but by specifying the wealth of nations he restricts himself to political economy which he says has two distinct objects first to provide a plentiful revenue or subsistence for the people or more properly to enable them to provide such a revenue or subsistence for themselves and secondly to supply the state or commonwealth with a revenue sufficient for the public services In saying that the political economist aims to enrich

both the people and the sovereign and that the great obje t of the political economy of every country is to increase the riches and power of that country Smith takes wealth as an end (though it may also be a means so far as power depends upon riches) and tries to formulate the natural laws of wealth making

Nowhere does he define the quantity of wealth which should satisfy a nation The natural resources of a country the size and industry of its population and various unfavorable contingencies may set certain bounds to the maximization of wealth Within these bounds the country which adopts and follows a sound system of political economy—one which accords with the right conception of wealth and its causes—can (and deserves to) become as wealthy as possible

Yet Smith in treating wealth as an end and its increase without limit as a good does not make economics absolutely autonomous He re ards political economy as a part of politics—a branch of the science of a statesman or legislator —and to that extent implies that other considerations than wealth may control the policies of a nation in its regulation of agriculture industry domestic commerce and foreign trade

Furthermore the larger moral questions which accompany Smith s economic speculations in his *Lectures on Jurisprudence* and his earlier treatise *Of the Moral Sentiments* are not entirely absent from the *Wealth of Nations* But to the extent that he writes purely as an economist concerned with securing cheapness or plenty or what for him is the same wealth and abundance he adheres to cons derations of expediency and only infrequently permits himself *ob ter d cta* on justice or questions of right and wrong

Karl Marx also writes as an economist He details the factors which govern the production and d stribution of wealth as these manifest themselves in the great historic systems of production—the slave economy the feudal economy and the bourgeois or capitalist economy So far he is a scientist and even more than Adam Smith an historian who describes how wealth is acquired and how it multiplies by reproducing itself But Marx is much less content than Smith to stop there Smith tries to describe the economic process scientifically in order to prescribe the means a nation should use to become increasingly prosperous but Marx undertakes to describe it in order to criticize the way in which some men get richer than they need be while others become poorer than they should be

His critical purpose makes inevitable the expression of moral judgments concerning such inequities and by implication they are everywhere present For example a descriptive phrase like surplus value connotes unearned increment an apparently neutral economic term like profit is given the invidious moral significance traditionally attached to usury Nor does Marx rest with criticism He has an economic program to propose a program he reveals more clearly in the *Communist Manifesto* than in *Capital* The aim is not primarily to increase the production of wealth but to remedy its inequitable distribution under all past economic systems This program looks forward to the final revolution which will bring the necessary historic motion of progress to its culmination when socialism replaces capitalism

S ITH AND MARX IT APPEARS are not economists in the same sense But it may be supposed that in spite of their different purposes they would as scientists agree in their description of economic phenomena To some extent they do yet the difference in their point of view and aim leads to a quarrel about facts or at least about their interpretation

Class cal economists in the tradition of Adam Smith dispute the consequences which Marx draws from the labor theory of value especially with regard to the origin of profit from the surplus product of unpaid labor time Profit seems to them as much a part of the natural price of commodities a the wages paid to labor and the rent paid to the landlord

In exchanging the complete manufacture either for money for labor or for other goods over and above what may be sufficient to pay the price of the materials and the wages of the workmen something writes Smith must be given for the profits of the undertaker of the work who hazards his stock in th s adventure The value which the wo kmen add to the materials therefore r solves itself in this case into

two parts of which the one pays their wages the other the profits of their employer upon the whole stock of materials and wages which he advanced He could have no interest to em ploy them unless he expected from the sale of their work something more than what was suf ficient to replace his stock to him and he could have no interest to employ a great stock rather than a small one unless his profits were to bear some proportion to the extent of his stock

It is precisely on this point of profit as a re turn for risking one s capital stock that Marx charges Smith and after him Ricardo and J S Mill with being apologists for the capital istic system He quotes Mill s statement that the cause of profit is that labor produces more than is required for its support The fact that Mill does not question the validity of this sur plus value which accrues as profit to the *en trepreneur* the fact that Ricardo treats surplus value according to Marx as a thing inherent in the capitalist mode of production which mode in his eyes is the natural form of social production is explicable in Marx s view only if we recognize that their economic theories mix special pleading with science These bour geois economists instinctively saw and rightly so he says that it is very dangerous to stir too deeply the burning question of the origin of surplus value

Though he distinguishes between its classical and vulgar forms political economy for Marx is a bourgeois science which first sprang into being during the period of manufacture Po litical economy has generally been content to take just as they were the terms of commercial and industrial life Engels remarks in a prefa tory note to *Capital* and so it never went beyond the received notions of profit and rent never examined this unpaid part of the product (called by Marx surplus product) in its integ rity as a whole and therefore never arrived at a clear comprehension either of its origin and nature or of the laws that regulate the subse quent distribution of its value

Marx s work is in his own conception of it at one and the same time a criticism of the capitalist economy and of the science of eco nomics which accepts and defends that eco nomic system In his own preface to *Capital* Marx tells the reader that the volume which I now submit to the public forms the continu ation of an earlier work—*A Contribution to the Critique of Political Economy* Within the sphere of political economy as defined by the problem of augmenting a nation s wealth the author of the *Wealth of Nations* similarly finds a critique of prevalent economic fallacies—those of the physiocrats and the mercantilists—inseparable from the constructive statement of his own theory

Economists engage in controversy over tech nical points in the analysis of production ex change and distribution or in the development of theories of value and price money and capi tal property and poverty Such controversy tends to become complicated both by the larger questions in which the economic issues are im bedded and also by the different points of de parture and the different objectives of the economists What at first may look like a simple issue of fact often fails on closer examination to be capable of resolution by scientific inquiry or simply by an accurate description of the phenomena

Even when all relevant matters of fact are determined conflicting interpretations of their significance remain Behind these lie divergent presuppositions often unexpressed Those who start with different conceptions of the problem and from different principles assumed rather than argued tend to reach conclusions which may appear to be opposed but which do not really exclude one another—at least not totally Each from its own point of view may be true and from that point of view the other is not so much false as irrelevant

Smith may be right for example when he says that the consideration of his own private profit is the sole motive which determines the owner of any capital to employ it either in a n culture in manufactures or in some particular branch of the wholesale or retail trade The different quantities of productive labor which it may put into motion and the different values which it may add to the annual produce of the land and labor of the society according as it is employed in one or other of those different ways never enter his thoughts. Smith may be right not only as to the fact as erted but also with regard to its implication for the increase

of the nation s wealth that the wealth of a society increases as owners of capital act from self interest in a system of free enterprise which permits the possibility of profits to indemnify them against the risk of losses and to reward them for the thrift whereby they accumulated capital to invest productively

But Marx may also be right when he says that the system of free enterprise and capital istic production could not have started simply through the thrift of individuals but required a primitive accumulation of capital The accumulation of capital he says presupposes surplus value surplus value presupposes capi talistic production capitalistic production pre supposes the existence of considerable masses of capital and labor power in the hands of pro ducers of commodities The whole movement therefore seems to turn in a vicious circle out of which we can only get by supposing a primi tive accumulation (previous accumulation of Adam Smith) preceding capitalistic accumu lat on a primitive accumulation which is nothing else than the historical process of divorcing the producer from the means of pro duction He may be right furthermore when he goes on to say that the economic structure of capitalistic society has grown out of the eco nomic structure of feudal society The his torical movement which changes the producers into wage-workers appears on the one hand as their emancipation from serfdom and from the fetters of the guilds but on the other hand these new freedmen became sellers of themselves only after they had been robbed of all their own means of production and of all the guarantees of existence afforded by the old feudal arrangements

It may be true that a capitalist who privately owns means of production would not invest them *without the possibility of gaining a profit* It may be true as Smith would insist that he would not be justified in doing so This how ever does not invalidate—as it is not invali dated by—Marx theory of the orig nal ex propriation which in his opinion initiated capitalistic enterprise nor does it conflict with Marx s insistence that the capitali t must ex ploit labor in order to make profits since he can derive them only from the surplus value cre ated by wage-laborers who produce more than is returned to them for their own needs or sub sistence

THE FOREGOING POINT AND counter point in economic theory must serve as one example of the way in which Smith and Marx pass each other rather than meet on many of the basic economic issues It would be impossible within the compass of this Introduction to chart the intricate relationship of their thought includ ing their agreements and clear oppositions as well as the matters on which they simply di verge because they are discussing the same problem from different viewpoints The reader can discover for himself in greater detail the pattern of conversation between these two great economists by studying the passages from their works which are cited in the References

As a glance at the Outline of Topics will show many of the headings represent tech ni al problems or issues in economic theory as that is narrowly conceived in modern times Some however are more general They state themes which place the discussion of wealth in the larger context of moral and political ques tions and which throughout the whole tra dition engage poets historians and philoso phers—not merely the economists of the eight eenth and nineteenth centuries

To some extent the more general themes are treated in other chapters such as LABOR JUS TICE OLIGARCHY VIRTUE and HAPPINESS FAMILY and STATE Here we shall consider them for their bearing on the nature and kinds the sources and uses, of wealth and also its good ness and evil

THE ANCIENTS CONCEIVE WEALTH as consisting in the variety of external goods which sustain life —food clothing and shelter But wealth may include *more than the bare necessities* When So rates in the *Republ c* outlines a simple econ omy which aims to satisfy only basic needs Glaucon tells him that he is providing for a city of pigs More is required he says for the ordinary conveniences of life People who are to be comfortable are accustomed to lie on sofas and dine off tables and they should have sauces and sweets in the modern style Socrates replies by projecting a luxur ous State — a State at fever heat —which goes beyond the

necessaries such as houses and clothes and shoes The arts of the painter and the embroiderer he says will have to be set in motion and gold and ivory and all sorts of materials procured and the city will have to fill and swell with a multitude of callings which are not required by any natural want

This distinction between necessities and luxuries which has many implications for ethics and economics as well as for politics does not draw the line between natural and artificial wealth Nor is natural wealth identified exclusively with natural resources in their pure state unconverted by labor for use or consumption Wealth is generally thought to comprise all consumable goods whether necessities or luxuries whether products of hunting agriculture or manufacture and all the means of producing them Only money is excluded Only money is declared to be either not wealth at all or artificial wealth

Yet the confusion of money with wealth seems to be prevalent at all times as repeated attempts to correct the fallacy indicate The use of money originates according to Aristotle with retail trade which is not a natural part of the art of getting wealth for he goes on had it been so men would have ceased to exchange when they had enough What Aristotle calls retail trade replaces the barter of necessary articles Made possible by the use of coin retail trade he says comes to be thought of as the art which produces riches and wealth

Indeed Aristotle continues riches is assumed by many to be only a quantity of coin But he agrees with those who maintain to the contrary that coined money is a mere sham a thing not natural but conventional only because it is not useful as a means to any of the necessities of life and he who is rich in coin may often be in want of necessary food But how can that be wealth of which a man may have a great abundance and yet perish with hunger like Midas in the fable whose insatiable prayer turned everything that was set before him into gold?

To say that money in itself cannot satisfy any natural need does not imply that it serves no economic purpose Plato and Aristotle Hobbes Locke and Kant as well as Smith and Marx understand the utility of money as a medium of exchange indispensable for the circulation of commodities —to use Marx s phrase—beyond the stage of barter Money is not only a medium of exchange according to Plato it reduces the inequalities and incommensurabilities of goods to equality and common measure and Aristotle seems to anticipate Marx s conception of money as the universal form in which all economic values can be expressed when he defines wealth to mean all things whose value is measured by money

The economic utility of money in exchange and as a measure of value or even the fact that gold and silver coin may have some intrinsic value because of the labor involved in minin and minting the metals does not alter the distinction between natural and artificial wealth. Natural wealth Aquinas explains is that which serves man as a remedy for his natural wants such as food drink clothing cars dwellings and such like while artificial wealth such as money is that which is not a direct help to nature but is invented by man for the convenience of exchange and as a measure of all things saleable

The same point is restated by Locke in the seventeenth century but it is still necessary for Smith a century later to argue against the mercantilist theory of national prosperity on the ground that it confuses wealth with money It would be too ridiculous to go about seriously to prove Smith writes that wealth does not consist in money or in gold or silver but what money purchases and is valuable only for purchasing Goods can serve many other purposes besides purchasing money but money can serve no other purpose besides purchasin goods Money therefore necessarily runs after goods but goods do not always or necessarily run after money The man who buys does not always mean to sell again but frequently to use or consume whereas he who sells always means to buy again

Nevertheless that wealth consists in money or in gold and silver is a popular notion which naturally arises from the double function of money as the instrument of commerce and as the measure of value The notion is so familiar that Smith observes even they who are convinced of its absurdity are very apt to forget their own princ ples and in the course of their

reasonings to take it for granted as a certain and undeniable truth Some of the best English writers on commerce set out with observing that the wealth of a country consists not in its gold and silver only but in its lands houses and consumable goods of all different kinds In the course of their reasonings however the land houses and consumable goods seem to slip out of their memory and the strain of their argument frequently supposes that all wealth consists in gold and silver and to multiply these metals is the great object of national industry and commerce

The two principles of the mercantilist policy are according to Smith that wealth consisted in gold and silver and that those metals could be brought into a country which had no mines *only by the balance of trade* or by exporting to a greater value than it imported A favorable balance of trade thus necessarily became the sole object of the mercantilists and Smith adds its two great engines for enriching the country therefore were restraints upon importation and encouragements to exportation

Since in his opinion the wealth of a nation consists in the whole annual produce of its land and labor Smith opposes all such restraints and with them the protection of monopolies He advocates free trade and the free competition of producers within a country as well as between domestic and foreign producers on the ground that consumption is the sole end and purpose of all production and the interest of the producer ought to be attended to only so far as it may be necessary for promoting that of the consumer But in the mercantile system Smith claims the interest of the consumer is almost constantly sacrificed to that of the producer A *laissez faire* economy he thinks not only reverses this situation but also by preferring more consumable commodities to more gold and silver tends to increase the real not the artificial wealth of a nation

Marx also criticizes the mercantilist error but in terms of his theory that since the production of surplus value is the chief end and aim of capitalist production the greatness of a man s or a nation s wealth should be measured not by the absolute quantity produced but by the relative magnitude of the surplus value

Surplus value cannot be produced by exchange Against the mercantilists who derived the excess of the price over the cost of production of the product from the act of exchange from the product being sold above its value Marx quotes Mill s statement that profit arises not from the incident of exchange but from the productive power of labor and the general profit of the country is always what the productive power of labor makes it whether any exchange takes place or not

But this is not the whole picture according to Marx Although it is impossible for capital or surplus value to be produced by circulation or the exchange of commodities he also *thinks it is impossible that outside the sphere* of circulation a producer of commodities can without coming into contact with other commodity owners expand value and consequently convert money or commodities into capital The two sides of the picture are brought together in Marx s view by the treatment of labor itself as a commodity and the buying and selling of labor power in the open market

THE DISTINCTION BETWEEN REAL wealth and money and the distinction between necessities and luxuries have more than economic significance They are basic to the moralist s strictures concerning the desire for wealth its place in the order of goods and the way it can be put to good use

It is not only St Paul *who says that the love* of money is the root of all evil It is not only Christian theologians like Augustine and Aquinas who explain how lust of the eyes or covetousness is a capital sin and as such the principle of many other transgressions As Marx points out the Greeks also denounced money as subversive of the economical and moral order of things In the passage in Sophocles *Antigone* which he quotes Creon declares Nothing so evil as money ever grew to be current among men This lays cities low this drives men from their homes this trains and warps honest souls till they set themselves to works of shame this still teaches folk to practice villainies and to know every godless deed

Plato condemns the oligarchical state by

comparing it to the miser and money maker among men Such a State he says aims to become as rich as possible a desire which is insatiable In the *Laws* the Athenian Stranger explains why the reasonable statesman should not aim to make the state for the true interests of which he is advising as great and as rich as possible if he also desires to have the city the best and happiest possible for though each may be possible alone they are not possible together It is impossible he holds to be good in a high degree and rich in a high degree at the same time

What Plato says of the oligarch Marx says of the capitalist He shares with the miser the passion for wealth as wealth But Marx adds that which in the miser is a mere idiosyncrasy is in the capitalist the effect of the social mechanism of which he is but one of the wheels Involved as he is by the system in the restless never-ending process of profit making the individual capitalist like the miser exhibits this boundless greed after riches this passionate chase after exchange value

The root of the evil in the love of money—of gold yellow glittering precious gold which Shakespeare calls the common whore of mankind —is the boundlessness of the lust The hoarding of anything springs from an insatiable desire but because money can be converted into every sort of commodity it is according to Marx the ideal object of hoarding The antagonism between the quantitative limits of money and its qualitative boundlessness he writes continually acts as a spur to the hoarder in his Sisyphus like labor of accumulating

In the light of such observations Marx cites *with approval Aristotle s distinction between* economic and chrematistic or what Aristotle differentiates as the two arts of wealth getting Considering economics as the management of a household Aristotle says that the art of acquisition which is a natural part of it must either find ready to hand or itself provide such things necessary to life and useful for the community of the family or state as can be stored They are the elements of true riches for the amount of property which is needed for a good life is not unlimited But there is another variety of the art of acquisition which is commonly and rightly called an art of wealth getting and has in fact suggested that riches and property have no limit

The two arts tend to become confused in men s minds Some persons are led to believe Aristotle observes that getting wealth is the object of household management and the whole idea of their lives is that they ou ht either to increase their money without limit or at any rate not to lose it The origin of this disposition in men is that they are intent upon living only and not upon living well and as their desires are unlimited they also desire that the means of gratifying them should be without limit Even those who do aim at a good life seek the means of obtaining bodily pleasures and since the enjoyment of these appears to depend upon property they are absorbed in getting wealth and thus there arises the second kind of wealth getting

Plato like Aristotle while admitting the service of retail trade in effecting the exchange of commodities condemns the tendency of its practitioners to make gains without limit In the *Laws* furthermore he prohibits interest on loans and in the *Republic* he describes this form of money making as a process in which men of business insert their sting—that is their money—into someone else who is not on his guard against them and recover the parent sum many times over multiplied into a family of children This biological metaphor for making money out of money appears also in Aristotle The term interest he says means the birth of money from money Of *all forms of money making* this breedin of money is in his opinion the most unnatural Usury which makes a gain out of money it*self* Aristotle writes violates *the natural* object of money— intended to be used in exchange but not to increase at interest

INTEREST AND USURY *are not* distinguished in the Old Testament Take thou no usury of him or increase is the command in Leviticus. But this rule does not apply to the stranger Unto a stranger thou mayst lend upon usury Deuteronomy says but unto thy brother thou shalt not lend upon usury

A theologian like Aquinas following both Scripture and Aristotle condemns for Chris

tians all interest as usury and Luther also ap peals to pagan precept as well as to Scriptural warrant The heathen were able by the light of reason to conclude that a usurer is a double dyed thief and murderer Luther says in a pas sa e which Marx quotes under the comment that the usurer is that old fashioned but ever renewed specimen of the capitalist Castigating his fellow-Christians for holding usurers in such honor that we fairly worship them for the sake of their money Luther declares that who- ever eats up robs and steals the nourishment of another that man commits as great a murder (so far as in him lies) as he who starves a man or utterly undoes him Such does a usurer

It seems to be a later consequence of the Protestant reformation as Weber and Tawney point out that the exaction of interest for the loan of money or goods is defended and only exorbitant rates of interest are denounced as usurious The signs of the change may be seen in Pascal s diatribe against the specious casu istry which tries to exempt some forms of in terest taking from the charge of usury and also in the fact that Montesquieu attributes to the schoolmen who adopted from Aristotle a great many notions on lending upon interest the mistake of condemning it absolutely and in all cases In his own opinion to lend money without *interest is certainly an action laudable* and extremely good but is is obvious that it is only a counsel of religion and not a civil law

Montesquieu thinks a price for the use of money is necessary for the carrying on of trade If a fair rate of interest is not allowed nobody will lend money or rather Montesquieu says because the affairs of society will ever make it necessary money lending will inevitably take the form of usury Usury increases in Moham *medan countries he points out in propor* tion to the severity of the prohibition The lender indemnifies himself for the dan er he undergoes of suffering the penalty

Smith agrees that prohibition instead of preventing has been found from experience to increase the evil of usury A fair rate of in terest is justified he thinks because as some thing can everywhere be made by the use of money something ought every where to be paid for the use of it In countries where interest is permitted the law in order to prevent the extortion of usury generally fixes the highest rate which can be taken without incurring a penalty This rate ought always to be somewhat above the lowest market price or the price which is commonly paid for the use of money by those who can give the most undoubted se- curity Smith offers the British practice as a good *example Where money is lent to gov* ernment at three per cent and to private people upon good security at four and four and a half the present legal rate five per cent is perhaps as proper as any

Interest and profit while not the same in Smith s view are closely connected As the revenue from land is rent from labor wages and that derived from stock by the person who manages or employs it is called profit interest is the compensation which the bor rower pays to the lender for the profit which he has an opportunity of making by the use of the money Part of that profit naturally belongs to the borrower who runs the risk and takes the trouble of employing it and part to the lender who affords him an opportunity of making this profit Conceiving interest as a derivative rev enue Smith holds it to be a maxim that wher ever a great deal can be made by the use of money a great deal will be commonly given *for the use of it so that we may expect to* find the usual market rate of interest to vary with the ordinary profits of stock

THE THEORY WHICH PLACES wealth lowest in the order of goods determines its contribution to human happiness accordingly and leads to a disapproval of luxuries on the part of both the individual and society

Riches are for the sake of the body as the body is for the sake of the soul The latter are good writes *Plato* and wealth is intended by nature to be for the sake of them and is therefore inferior to them both and third in the order of excellence Aristotle similarly order wealth or external goods to health and other goods of the body as these in turn are subordinate to the virtues or goods of the soul and Hobbes in somewhat different terms holds that of all good those that are dearest to a man are his own life and limbs and in the next degree (in most men) those that concern con

jugal affection and after them riches and means of living

While Aristotle admits that happiness requires some external prosperity he always adds that only a moderate amount of external goods is needed Happiness whether consisting in pleasure or virtue or both he writes is more often found with those who are most highly cultivated in their mind and in their character and have only a moderate share of external goods than among those who possess external goods to a useless extent but are deficient in higher qualities Aristotle praises Solon for telling Croesus one of the world s wealthiest men that happiness requires more than riches The conversation is narrated by Herodotus

What stranger of Athens Herodotus reports Croesus as saying is my happiness then valued so little by you that you do not even put me on a level with private men? To which Solon replies Croesus I see that you are wonderfully rich and the lord of many nations but he who possesses a great store of riches is no nearer happiness than he who has what suffices for his daily needs unless luck attends him and so he continue in the enjoyment of all his good things to the end of his life Aristotle adds the further observation that one can with but moderate possessions do what one ought and that a good life requires a supply of external goods in a less degree when men are in a good state and in a greater degree when they are in a lower state

Aquinas agrees with Aristotle so far as the happiness of the active life is concerned but he holds that wealth does not conduce to the happiness of the contemplative life rather is it an obstacle thereto With regard to achieving the happiness of heaven in the life hereafter Aquinas not only thinks wealth an obstacle but he also explains why the religious orders take the vows of voluntary poverty Man is directed to future happiness by charity he writes and in the attainment of the perfection of charity the first foundation is voluntary poverty whereby a man lives without property of his own

The opinion that wealth is an obstacle or that it should be sought in moderation does not seem to be universally shared As Herodotus Plato and Aristotle report the prevalence in the ancient world of the notion that "external goods are the cause of happiness so Melville reflects that in modern society the urbane activity with which a man receives money is really marvellous considering that we so earnestly believe money to be the root of all earthly ills and that on no account can a monied man enter heaven Ah! how cheerfully we consign ourselves to perdition! Marx quotes a still more extravagant claim In a letter from Jamaica in 1503 Christopher Columbus exclaims Gold is a wonderful thing! Whoever possesses it is lord of all he wants By means of gold one can even get souls into Paradise

Against Rousseau s attack upon opulence as the cause of civilization with all its miseries Dr Johnson rises in the defense of luxuries and the advantages of wealth Rousseau s treatise on the inequality of mankind Boswell writes, was at this time a fashionable topick It gave rise to an observation by Mr Dempster that the advantages of fortune and rank were nothing to a wise man To this Dr Johnson replies If a man were a savage living in the woods by himself this might be true but in civilized society external advantages make us more respected Sir you may make the experiment Go into the street and give one man a lecture on morality and another a shillin and see which will respect you the most

And Sir he continues if six hundred pounds a year procure a man more consequence and of course more happiness than six pounds the same proportion will hold as to six thousand and so on as far as opulence can be carried Perhaps he who has a large fortune may not be so happy as he who has a small one but that must proceed from other causes than from his having the large fortune for *ceteris paribus* he who is rich in a civilized society must be happier than he who is poor

On one occasion Dr Johnson seems to share Solon s view When Boswell suggests that the proprietor of a great estate must be happy he exclaims Nay Sir all this excludes but one evil—poverty But for the most part his opinion is that it is in refinement and elegance that the civilized man differs from the savage and that it is right for every society to be as luxurious as it can be

Many things which are false are transmitted from book to book he says to General Ogle thorpe and gain credit in the world One of these is the cry against the evil of luxury Now the truth is that luxury produces much good You will hear it said very gravely Why was not the half guinea thus spent in luxury given to the poor? To how many might it have af forded a good meal Alas! has it not gone to the *ind istrious* poor whom it is better to support than the *idle* poor? You are much surer that you ar doing good when you *pay* money to tho e who work as the recompense of their labor than when you *gıve* money in charity

And as to the rout that is made about people who are ruined by extravagance it is no matter to the nation that some individuals suffer When so much general productive exer tion is the consequence of luxury the nation does not care though there are debtors in gaol

Dr Johnson s pronouncements may silence Mr Dempster and General Oglethorpe but not Smith or Marx To Smith spendthrift ex travagance squanders wealth which might have been capitalized for productive purposes to Marx the multiplication of luxury products d verts labor power that is socially necessary for p oducing the means of subsistence into what Veblen later calls forms of conspicuous waste Not only in Marx s view can the cap italisti system be charged with indifference as to whether its profits are made out of the pro duction of luxuries or necessities but the workers on starvation wages e gaged in the luxury trades constitute a signal indictment of the inequitable distribution of wealth

As THE NEEDS OF THE individual are thought to set a natural limit to his acquisition of wealth or at least to provide him with a rational stand ard for stopping short of wanton luxuries when he seeks the decencies or amenities of life so the needs of soc ety as a whole are thought to establish a criterion of justice in the distribution of wealth

God gave the world to men in common says Locke and the measure of property na ture ha well set by the extent of man s labor and the convenience of l fe No man s labor could subdue or appropriate all nor could his enjoyment consume more than a small part so that it was impossible for any man this way to intrench upon the right of another who would still have room for as good and as large a pos session (after the other had taken out his) as before it was appropriated Which measure did confine every man s possession to a very moder ate proportion and such as he might appropri ate to himself without injury to anybody in the first age of the world

This rule of property— that every man should have as much as he could make use of without prejudice or injury to others—worked well in the beginning when as Locke puts it all the world was America It would still hold in the world without straitening anybody Locke thinks since there is land enough in the world to suffice double the inhabitants had not the invention of money introduced (by consent) larger possessions and a right to them for gold and silver being relatively imperish able men can hoard excesses of them without appearing to waste them as they would if they amassed perishable commodities which they could not consume or use

It is not money but property itself which Rousseau claims to be the origin of inequality among men and of the inequitable distribution of wealth The first man who having enclosed a piece of ground bethought himself of saying *This is mine* and found people simple enough to believe him was the real founder of civil soci ety Once established as a right property tends to expand The larger proprietors avoid the question Do you not know that numbers of your fellow creatures are starving for want of what you have too much of? Instead ac cording to Rousseau they conceive the pro foundest plan that ever entered the mind of man to protect their possessions against inva sion or plunder They institute civil govern ment ostensibly for the security of all but really to secure for themselves their property and power

Such v as or may well have been Rous seau writes the origin of society and law which bound new fetters on the poor and gave new po vers to the rich which irretrievably destroyed natural liberty eternally fixed the law of property and inequality converted clev er usurpation into unalterable right and for the advantage of a few ambitious individuals

subjected all mankind to perpetual labor slavery and wretchedness Adam Smith seems to agree Where there is no property he says or at least none that exceeds the value of two or three days labor civil government is not so necessary Civil government so far as it is instituted for the security of property is in reality for the defense of the rich against the poor or of those who have some property against those who have none at all

But unlike Smith Rousseau has an alternative to propose Since it is plainly contrary to the law of nature that the privileged few should gorge themselves with superfluities while the starving multitude are in want of the bare necessities of life he thinks it is one of the most important functions of government to prevent extreme inequalities of fortunes not by taking away wealth from its possessors but by depriving all men of means to accumulate it not by building asylums for the poor but by securing the citizens from becoming poor

THIS STATES AN END but not the means for achieving it The problem of poverty is not so easily solved if it can be solved at all once the right of property is admitted Rousseau for example no less than Locke and others before him affirms this right which for Kant and Hegel later is almost the whole substance of private or abstract right The right of property says Rousseau is the most sacred of all the rights of citizenship and even more important in some respects than liberty itself Yet it is difficult he admits to secure the property of individuals on one side without attacking it on another and it is impossible that all the regulations which govern the order of succession wills contracts etc should not lay individuals under some constraint as to the disposition of their goods and should not consequently restrict the right of property

To Hegel poverty seems to be an inevitable consequence of property as war is an inevitable consequence of sovereignty and in neither case can the cause be abolished When the masses begin to decline into poverty as they must they can be supported from public funds and private charities thus receiving subsistence directly not by means of their work or as an alternative they might be given subsistence indirectly through being given work But Hegel adds in this event the volume of production would be increased but the evil consists precisely in an excess of production and in the lack of a proportionate number of consumers who are themselves also producers and thus it is simply intensified by both of the methods by which it is sought to alleviate it Hence Hegel concludes it becomes apparent that despite an excess of wealth civil society is not rich enough to check excessive poverty and the creation of a penurious rabble This inner dialectic of civil society thus drives it—or at any rate a specific civil society—to push beyond its own limits and seek markets and its necessary means of subsistence in other lands which are either deficient in the goods it has over produced or else generally backward in industry

Imperialism according to Marx will not long work as a cure for what Tawney later calls the sickness of an acquisitive society —the inner frustration which Marx sees manifested in recurring economic crises and depressions of greater and greater magnitude Nor does he propose the abolition of all private property as the remedy for poverty when he calls for the expropriation of the expropriators On the contrary only the possession by each individual of an adequate supply of consumer s goods can abolish poverty Differentiating between individual and capitalist property accordin as its owners are or are not laborers and according as it consists in consumable goods or the means of production Marx would transfer the latter from private property to public ownership

The socialist economy he outlines also includes abolition of property in land and application of all rents of land to public purposes a heavy progressive or graduated income tax abolition of all right of inheritance It includes centralization of credit in the hands of the state by means of a national bank with State capital and an exclusive monopoly and also centralization of the means of communication and transport Last but not least it includes equal liability of all to labor

More radical than Marx s socialism is the communism Plato proposes in the *Republic* Plato s aim is not to solve the problem of poverty or economic injustice By abolishing

for his guardian class *all* private property he hopes that his guardians through sharing com mon possessions (including wives and children) will have no cause for rivalry dissension or personal ambition Common possessions should mould them into a fraternity and free them from private interests to work for the common good In this matter of property the condition of Plato s imagined guardians was not so dif ferent from that of Jesus disciples as recounted in the Book of Acts or of the monastic orders whose vows include that of voluntary poverty

Aristotle s criticisms of the arrangements for the guardian class in the *Republic* are largely directed against the community of women and children and the elimination of private prop erty Property he says should be in a cer tain sense common but as a general rule private for when everyone has a distinct interest men will not complain of one another and they will make more progress because everyone will be attending to his own business He thinks it is clearly better that property should be private but the use of it common in the sense that its use have the common welfare in mind

Not only does Aristotle defend private prop erty on many counts but he objects to schemes for equalizing it such as Plato sets forth in the *Laws* For one thing the legislator ought not only to aim at the equalization of properties but at moderation in their amount Yet if the legislator prescribe this moderate amount equally to all he will be no nearer the mark for it is not the possessions but the desires of man kind which need to be equalized and this is impossible unless a sufficient education is pro vided by the laws

Whether or not communism is desirable there are those who think it is impossible not so much on the level of the economic as on the level of the moral revolution for which Aris totle looks to education The skeptic thinks human nature cannot be so transformed It may be only in the twentieth century that the world is divided into two camps on this subject but the issue is as old as the western tradition At its beginning Aristophanes expresses the skeptical position in a form that is still current His *Ecclesiazusae* simply laughs at the idea that inequalities of property can ever be done away with—by law or by education

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to For example in 4 HOMER *Iliad* BK II [265 283] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 1

PAGE SECTIONS When the text is printed in one column the letters a and b refer to the upper and lower halves of the page For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119 When the text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand side of the page the letters c and d to the upper and lower halves of the right hand side of the page For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164

Chapter 100 WILL

INTRODUCTION

THE great controversy over the freedom of the will tends to overshadow the theory of the will itself For some thinkers the two notions are inseparable As the word choice popularly connotes freedom in choosing between alternatives so for them liberty belongs to the very nature of the will But others who affirm that men can act freely or voluntarily also deny that the will itself is ever free

Still others who distinguish between voluntary and reflex act ons—on the part of brute animals as well as men—also distinguish between the voluntary and the free They reserve freedom to men alone on the ground that men alone have wills Far from identifying will with free will they differentiate between those acts of the will which are necessitated and those which are free

It would appear from this sampling of conflicting opinions that the issue concerning free will presupposes and often conceals diverse theories of the will—different conceptions of its nature its various acts and its relation to other faculties Those who affirm and those who deny the will s freedom of action hardly meet on that issue if they proceed from different concept ons of what the will is and how it operates

The matter is further complicated by different conceptions of freedom Even those who define will in somewhat similar terms conceive its liberty d fferently As the chapter on LIBERTY ind cates freedom has many meanings—theolog cal metaphysical psychological moral natural and civil What is called free in one of these senses may not be so regarded in another But one thing is clear If as Hobbes thinks the only sense in wh ch freedom can be affirmed is that of natural or political liberty—the sense in which a man can *do* what he *wills* without restraint or compulsion—then the will is not free for its *freedom depends* on ho v its own acts are caused or how it causes other acts not on how the acts it causes are affected by outward circumstances beyond its control

The problem of the freedom of the will seems therefore to be primarily psychological and metaphysical It requires us to consider freedom in terms of *cause* and *necessity* It appeals to such distinctions as that between the caused the uncaused and the self caused or to the difference between the predetermined the contingent and the spontaneous event To this extent the problem is metaphysical But it is psychological insofar as the kind of event with which we are concerned is an interior act of a living thing and even more specifically of an intelligent being a being which has *mind* in some sense of that term We do not ask whether stones and *vegetables have free will because* we do not usually suppose that they have will Even those who like Aristotle attribute *desire* to all things or who like William James find a striving toward goals in at least all living things do not refer to volit on or the voluntary in the absence of imagination or thought

The italicized words in the foregoing paragraph indicate ideas which have the most fundamental bearing on the discussion of will and hence the relation of this to other chapters The chapters on CAUSE and NECESSITY (and those on FATE and CHANCE) deal with doctrines which both affect and are affected by various theories of the will s freedom. But if we are to postpone the question of f ee will *until the nature* of *will* itself is cons dered we must begin with definitions which employ terms discussed in the chapters on MIND and DESIRE

THE DISTINCTION BETWEEN thought and action sets the stage for the discovery of a factor or faculty which serves to connect them Acting may follow upon thinking but not wi[illegible]

intervention of a determination or a desire to translate thought into deed Plato in the *Republic* divides the soul into three parts of which one reason is the faculty of thought and knowledge and the other two spirit and appetite are principles of action Both spirit and appetite need to be guided and ruled by reason but according to Plato reason depends also upon spirit for without its support even wisdom must fail to influence conduct Though he does not use the word the role he assigns to spirit as the auxiliary of reason corresponds to the function performed by what later writers call will

The word will appears in the English translation of Aristotle It is used less frequently than other words—such as wish choice purpose impulse appetite desire —to designate a motivating force but along with them it signifies the factor which turns thought into action Unlike Plato who separates spirit and appetite Aristotle makes appetite the generic notion and treats will and desire as modes of appetite But sometimes desire is used as a synonym for appetite and sometimes wish or choice is substituted for will

In his treatise *On the Motion of Animals* we find Aristotle saying that the living creature is moved by intellect purpose wish and appetite All these are reducible to mind and desire For both imagination and sensation have this much in common with mind that all three are faculties of judgment However will impulse and appetite are all three forms of desire while purpose belongs both to intellect and to desire But in the treatise *On the Soul* we find him insisting that appetite be considered as the single faculty of originating local movement though if the soul were to be divided into a rational and an irrational part he would assign wish to the calculative or deliberative reason desire and passion to the irrational part Wish he writes is a form of appetite and when movement is produced according to calculation it is also according to wish but appetite can originate movement contrary to calculation for desire is also a form of appetite

What is said of purpose and wish is also said of choice All three somehow combine reason and desire Giving choice as the cause of specifically human action and desire combined with deliberation as the origin of choice Aristotle speaks of choice as either desiderative reason or ratiocinative desire Lacking reason animals do not have choice according to Aristotle or for that matter wish or purpose either but insofar as their appetites are stirred by sensation or imagination and the desires aroused lead to action animals behave voluntarily

When the words desire and appetite are so used not to name the generic faculty of originating movement but to signify a motivation different in kind from wish purpose or choice they correspond to what Aquinas later calls animal appetite or sensitive desire This is for him the sphere of the emotions or passions He treats the impulses of fear and anger for example as acts of the sensitive appetite

The kind of desire which for Aristotle depends upon practical reason Aquinas calls intellectual appetite or rational desire Since will is for him just another name for the desire or appetite which is determined by reason rather than sense he necessarily holds that irrational animals do not have will

Aristotle says that the apparent good is the object of appetite and the real good is the primary object of rational wish Aquinas distinguishes somewhat differently between the object of the passions and the object of the will For each sort of appetite or desire the object takes its special character from the faculty by which it is apprehended The sensible good perceived or imagined stands to the sensitive appetite as the intelligible good judged by reason stands to the intellectual appetite or will

In one place Aristotle differentiates between wish and choice by saying that we can wish for the impossible whereas choice is always of things within our power But his more usual distinction is in terms of means and end The end is what we wish for he writes the means what we deliberate about and choose Aquinas also divides the acts of the will according as they concern means or ends but where Aristotle mentions only choice and wish Aquinas enumerates three acts of the will with respect to ends (volition intention and enjoyment) and three with respect to means (consent choice and use)

According to Aquinas each of thes acts of the

will responds to a distinct act of the practical r ason and except for the will s last acts each may in turn be followed by further practical thou ht This progressive determination of the will by reason goes on until the *use* of means leads to action and action leads to the enjoy ment of the end accomplished As in practical reasoning ends come before means so for the will the end comes first in the order of inten tion but in the order of execution action begins with the means

LIKE ARISTOTLE AND Aquinas Kant and Hegel conceive will as a faculty of desire or activity founded upon reason and so they attribute will as they attribute reason to man alone But both Kant and Hegel go further and almost identify will in its pure state with reason

The faculty of desire writes Kant in so far as its inner principle of determination as the ground of its liking or predilection lies in the reason of the subject constitutes the will and he goes on to say that the will in so far as it may determine the voluntary act of choice is the practical reason itself Only man can claim possession of a will which takes no ac count of desires and inclinations and on the contrary conceives action as possible to him nay even necessary which can only be done by disregarding all desires and sensible inclina tions

In this last statement Kant seems to use the word desire in a sense which is opposed to will The context indicates that he has in mind something like the distinction made by Aqui nas between sensitive and rational desire This indication is confirmed by his own distinction between brute and human choice That act which is determinable only by inclination as a sensuous impulse or stimulus would be irration al brute cho ce (*arbitrium brutum*) The human act of choice however as human though in fact *aff ct d* by such impulses or stimuli is not *determ ned* by them and it s therefore not pure in itself when taken apart from the ac quired habit of determin tion by reason But according to Kant the human act of choice can be determined solely by reason Only then is it determined to action by the pure w ll

One point must be observed to which we shall subsequently return The pure will is for Kant a free will The act of choice that is determined by pure reason he writes is the act of free will The freedom of the act of volitional choice is its independence of being determined by sensuous impulses or stimuli This forms the negative conception of the free will The positive conception of freedom is given by the fact that the will is the capability of pure reason to be practical of itself Insofar as pure reason is able to become practical that is to determine choices and direct action independ ently of all sensuous impulses or inclinations that reason is in itself the pure will and that will is in its very essence free

For Hegel also freedom is of the essence of will Freedom he writes is just as funda mental a character of the will as weight is of bodies Heaviness constitutes the body and is the body The same is the case with freedom and will since the free entity is the will Will without freedom is an empty word while free dom is actual only as will as subject

Though the passions enter into the sphere of the subjective will according to Hegel will transforms them Subjective volition—Passion —is that which sets men in activity that which effects practical realization When it is occu pied with the passions the subjective will He gel writes is dependent and can gratify its de s res only within the limits of this dependence. The passions however are common to both men and animals An animal too has impulses desires inclinations Hegel says but it has no will and must obey its impulses if nothing external deters it Only man the wholly un determined stands above his impulses and may make them his own put them into himself as his own An impulse is something natural but to put it into my ego depend on my will

Hegel explains this aspect of the will by ref erence to that element of pure indeterminacy or that pure reflection of the ego into itself which involves the d ssipation of every restric tion and every content either immediately pre sented by nature, by needs desires and im pulses or given and determined by any means whatever But indeterminacy is only one mo ment of the will its negative aspect The second moment occurs in the transition from undif ferentiated indeterminacy to the differentia tion determination and positing of a deter

minacy as a content and object Both of these moments are partial each the negation of the other The indeterminate will in Hegel s opinion is just as one sided as the will rooted in sheer determinacy What is properly called the will includes in itself both the preceding moments

As the unity of both these moments the will is particularity reflected into itself and so brought back to universality *i e* it is individuality It is Hegel continues the *self* determination of the ego which means that at one and the same time the ego posits itself as its own negative *i e* as restricted and determinate and yet remains by itself *i e* in its self identity and universality While the two previous moments of the will are through and through abstract and one sided the third moment gives us the individual will and freedom in the concrete Freedom lies neither in indeterminacy nor in determinacy it is both of these at once Freedom is to will something determinate yet in this determinacy to be by oneself and to revert once more to the universal

In the tradition of the great books other writers place the essence of the will not in its freedom but in its being the cause of the voluntary acts performed by animals and men The students of physiology from Aristotle to William James distinguish the movements of the various bodily organs—the heart the lungs the organs of digestion excretion and reproduction—from those movements of the whole animal or of its members which are somehow based upon desire and imagination or thought

Aristotle sometimes calls these physiological changes non voluntary and sometimes involuntary though he has another meaning for involuntary when he describes the conduct of a man compelled by fear to do something contrary to his wishes *e g* the captain who throws his cargo overboard to save his ship The completely non voluntary motion is one which occurs quite apart from any *knowledge* of the end or without conscious desire whereas the involuntary involves some conflict of desires When the involuntary in this special sense is not considered only a twofold division is made as in James distinction between reflex and voluntary movements Harvey s distinction between natural and animal motions or Hobbes distinction between vital and animal motions.

There be in animals Hobbes writes two sorts of motions peculiar to them one called vital such as are the course of the blood the pulse the breathing the concoction nutrition excretion etc to which motions there needs no help of imagination The other is *animal motion* otherwise called *voluntary motion* as to go to speak to move any of our limbs in such manner as is first fancied in our minds Because going speaking and the like voluntary motions depend always upon a precedent thought of *whither which way* and *what* it is evident that the imagination is the first internal beginning of all voluntary motion

But the imagination according to Hobbes gives rise to voluntary motions through arousing desire or appetite When desires and aversions hopes and fears alternately succeed one another what Hobbes means by deliberation takes place and he declares in deliberation the last appetite or aversion immediately adhering to the action or to the omission thereof is that which we call Will the act (not the faculty) of willing And beasts that have deliberation must necessarily also have will The definition of the will given commonly by the Schools that it is a *rational appetite* is not good For if it were then could there be no voluntary act against reason For a voluntary act is that which proceedeth from the will and no other

Locke disagrees with Hobbes view that willing is an act of desire That the will is perfectly distinguished from desire he thinks may be seen in the fact that desire may have a quite contrary tendency from that which our wills set us upon Desire according to Locke is an uneasiness of the mind for want of some absent good whereas will is the power to begin or forbear continue or end the several actions of our minds and motions of our bodies barely by a thought or preference of the mind ordering or as it were commanding the doing or not doing such or such a particular action The actual exercise of that power by directing any particular action or its forbearance is that which we call volition or willing

Though volition is not an act of desire Locke holds that it is the uneasiness of desire which

determines the will to the successive voluntary actions And though Locke speaks of willing as if it were an act of thought he distinguishes between the mind s power of understanding and of willing The one is a passive the other is an active power Understanding or perceptivity is a power to receive ideas or thoughts will or motivity is the power to direct the operative faculties to motion or rest

In this conception of the will as the po er the mind has to control the faculties or the motions of the body which can be voluntarily exercised Locke like Hobbes before him and William James after explains the will s action in terms of thinking of the motion to be performed or the deed to be done Discussing the theory of what he calls ideo motor action James says that a supply of ideas of the various movements that are possible left in the memory by experiences of their involuntary performance, is thus the first prerequisite of the voluntary life Reflexive or other innately determined movements do not depend upon consciousness of the movement to be performed That is why voluntary movement must be secondary not primary functions of our organism or as he says in another place the action which is performed voluntarily must before that at least once have been impulsive or reflex.

The kind of idea which initiates a voluntary movement James calls a kinaesthetic image —an image of the sensations which will be experienced when the movement takes place "In perfectly simple voluntary acts he writes there is nothing else in the mind but the kinaesthetic image thus defined of what the act is to be In certain cases however there must be an additional mental antecedent in the shape of a fiat decision consent volitional mandate before the movement can follow Th s becomes necessary when contrary kinaesthetic images vie with one another to initiate antagonistic movements The express fiat or act of mental consent to the movement comes in when the neutralization of the antagonistic and inhibitory idea is required

With the prevalence once there as a fact of the motive idea James goes on the *psychology* of volition properly stops The movements which ensue are exclusively phys olo_ical phenomena following according to physiological laws upon neural events to which the idea corresponds The *willing* terminates with the prevalence of the idea We thus find that we reach the heart of our inquiry into volition when we ask by what process it is that the thought of any given object comes to prevail stably in the mind The answer James gives is that it is the essential achievement of the will to attend to a difficult object and hold it fast before the mind The so-doing *is* the *fiat* Effort of attention is thus the essential phenomenon of the will

Though Freud does not use the word will or analyze voluntary movements in ideo motor terms, he does attribute to what he calls the ego the function which Locke and James ascribe to will In popular language he writes we may say that the ego stands for reason and circumspection while the id stands for the untamed passions To the ego is given the task of representing the external world for the id and so of protecting it from destructive conflicts with reality

In d scharging this function on behalf of the id the ego controls the path of access to motility but Freud continues it interpolates between desire and action the procrastinating factor of thought during which it makes use of the residues of experience stored up in memory In this way it dethrones the pleasure principle which exerts undisputed sway over the processes in the id and substitutes for it the reality principle which promises greater security and greater success

AS THE PROBLEM OF the will s freedom involves the question of whether or how its acts are caused so the will s action raises a problem concerning how it causes the voluntary effects it produces In Locke s view we are equally at a loss to explain how one body moves another and how our own bodies are moved by our will The passing of motion out of one body into another he thinks is as obscure and inconceivable as how our minds move or stop our bodies by thought which we every moment find that they do

If we could explain this and make it intelligible Locke says in another place then the next step would be to understand creation

Hume agrees that it must forever escape our most diligent inquiry how the motion of our body follows upon the command of our will That it does he says is a matter of common experience like other natural events But the power and energy by which this is effected like that in other natural events is unknown and inconceivable

No less mysterious to Hume is the coming into existence of an idea consequent to the command of the will which seems to imply a creative power by which it raises from nothing a new idea and with a kind of *Fiat* imitates the omnipotence of its Maker How this operation is performed the power by which it is produced seems to him entirely beyond our comprehension

Spinoza and Descartes take a different view of the relation between the will and the intellect or understanding Neither admits that the human will forms new ideas or as Spinoza says that there are mere fancies constructed by the free power of the will Both conceive the will s activity as consisting in assent or dissent to ideas their affirmation or negation But beyond this point they part company

For one thing Descartes distinguishes between the will as a faculty of choice and the understanding as a faculty of knowledge whereas Spinoza holds that the will and the intellect are one and the same Since Spinoza denies that will and intellect are anything except the individual volitions and ideas themselves it is more precise he suggests to say that the individual volition (*i e* the affirmation or negation of *this* idea) and the individual idea affirmed or denied are one and the same

In consequence they differ with respect to the power of volition Spinoza criticizes the supposition he finds in Descartes that the will extends itself more widely than the intellect and is therefore different from it Whereas Descartes thinks that the faculty of comprehension which I possess is of very small extent and extremely limited Spinoza says I am conscious of a will so extended as to be subject to no limits We can affirm or deny much more than we can know with certitude

This difference between Spinoza and Descartes reveals itself most strikingly in their conception of God s will According to Descartes the omnipotence of God lies in the supremacy of his will—in its absolute independence even with respect to the divine intellect It is self contradictory that the will of God should not have been from eternity indifferent to all that has come to pass or ever will occur Thus, to illustrate God did not will the three angles of a triangle to be equal to two right angles because he knew that they could not be otherwise On the contrary it is because he willed the three angles of a triangle to be necessarily equal to two right angles that this is true and cannot be otherwise Against Descartes voluntarism Spinoza declares it absurd to say that God could bring it about that it should not follow from the nature of a triangle that its three angles should be equal to two right angles

Such different conceptions of the will or of its power necessarily lead to opposite conclusions concerning free will—in man or God The human mind according to Spinoza cannot be the free cause of its own actions In each of its volitions as in each of its ideas it is determined by a cause The supposition of an infinite will in God does not exempt that will from the need to be determined in its acts nor can God on this account be said to act from freedom of will. Yet Spinoza also affirms that God alone is a free cause for God alone exists and acts from the necessity of his own nature Freedom does not reside in the will nor in the absence of necessity or causal determination but rather in self determination It does not consist in choice but in the absence of compulsion by causes which lie outside one s own nature Hence only an infinite being—a *causa sui* in Spinoza s sense—can be free

Descartes on the other hand places freedom in the will and identifies it with the power of choice The faculty of will he writes consists alone in our having the power of choosing to do a thing or choosing not to do it or rather it consists alone in the fact that in order to affirm or deny pursue or shun those things placed before us by the understanding we act so that we are unconscious that any outside force constrains us in so doing Descartes seems to conceive the will as cause of itself in its acts of choice But he does not attribute to the human will the autonomy Spinoza ascribes to God

The knowledge of the understanding he

writes, "should always precede the determination of the will and in another place he says that our will impels us neither to follow after nor to flee from anything except as our understanding represents it as good or evil

In order to be free Descartes explains it is not necessary that I should be indifferent as to the choice of one or the other of two contraries but contrariwise the more I lean to the one—whether I recognize clearly that the reasons of the good and the true are to be found in it or whether God so disposes my inward thought—the more freely do I choose and embrace it The will always retains the power of directing itself towards one side or the other apart from any determination by the understanding The human will is in this sense always undetermined from without though it is not always indifferent to the alternatives confronting it It is indifferent Descartes holds only when a man does not know what is the more true or the better or at least when he does not see clearly enough to prevent him from doubting about it Thus the indifference which attaches to human liberty is very different from that which belongs to the divine

THE DENIAL OF FREE WILL in the tradition of western thought seems to follow from the principle that every happening must have a cause In the sphere of human conduct voluntary acts are no less determined effects of prior causes than involuntary acts Though both are equally necessitated the difference between the voluntary and the involuntary according to Hobbes Locke and Hume consists in the fact that when a man acts voluntarily he does what he himself has decided to do

The fact that his decision to act in a certain way is itself caused does not in the opinion of these writers abolish the freedom of his action but only the freedom of his will If freedom is attributed not to a man s will but to the man who can do what he wills then these writers think there is no conflict between freedom and necessity—or between freedom and the universal reign of causality For them freedom is abridged only by external forces which coerce a man to act contrary to his wishes or constrain him from acting as he wills Freedom in this sense is incompatible only with exterior compulsion not with the inner causal determination of every act of the will

To those who deny free will it does not seem to be an entirely satisfactory answer to say as Descartes does that we are immediately conscious of our freedom of choice In the Third Set of Objections urged by Thomas Hobbes against Descartes Objection XII (which is directed against Meditation IV wherein Descartes discusses free will) contains this statement We must note here also that the freedom of the will has been assumed without proof and in opposition to the opinion of the Calvinists In replying Descartes merely repeats his original statement of the evidence for free will

I made no assumption concerning freedom he writes which is not a matter of universal experience Though there are many who looking to the divine foreordination cannot conceive how that is compatible with liberty on our part nevertheless no one when he considers himself alone fails to experience that to will and to be free are the same thing (or rather that there is no difference between what is voluntary and what is free) To Gassendi who in another set of objections also denies the indeterminateness of the will Descartes replies 'These matters are such that anyone ought to experience them in himself rather than be convinced of them by ratiocination Refuse then to be free if freedom does not please you I at least shall rejoice in my liberty since I experience it in myself and you have assailed it not with proof but with bare negations merely

The experience of free will is no proof either the opponents reply for the experience is open to the suspicion that it is illusory rather than real It may be Hume suggest only a false sensation or seeming experience which we have of liberty or indifference in many of our actions We suffer this illusion even foist it upon ourselves he further suggests because we are motivated by the fantastical desire of shewing liberty In the same vein Freud later discounts objections to the determinism of psychoanalysis on the part of those who refuse to recognize the hidden causes which control their actions You have an illusion of a psychic freedom within you which you do not want to give up he says But this deeply rooted belief in psychic freedom and choice must be given up

because it is quite unscientific It must give way before the claims of a determinism which governs even mental life

THE DILEMMA OF FREE WILL or determinism does not seem to other writers to be so easily resolvable All theory is against the freedom of the will says Dr Johnson all experience for it Tolstoy states the dilemma in similar terms Regarding man as a subject of observa tion by the rational methods of the sciences Tolstoy writes we find a general law of neces sity to which he (like all that exists) is subject But regarding him from within ourselves as what we are conscious of we feel ourselves to be free This consciousnes is a source of self cogni tion quite apart from and independent of rea son Through his reason man observes himself but only through consciousness does he know himself You say I am not free But I have lifted my hand and let it fall Everyone under stands that this illogical reply is an irrefutable demonstration of freedom That reply is the expression of a consciousness that is not subject to reason

The problem cannot be solved Tolstoy thinks by ignoring one side of the question To do that is to put the problem on a level on which the question itself cannot exist In our time Tol stoy continues the majority of so called ad vanced people—that is the crowd of ignora muses—have taken the work of the naturalists who deal with one side of the question for a solution of the whole problem But to admit that from the point of view of reason man is subject to the law of necessity does not ad vance by a hair s breadth the solution of the question which has another opposite side based on the consciousness of freedom Not only does this unshakable irrefutable con sciousness of freedom uncontrolled by experi ment or argument constitute for Tolstoy the other side of the question but it is also for him that ithout which no conception of man is possible

William James takes a somewhat different view of the dilemma of free will or determinism Conceiving the act of free will in terms of the exertion of an effort on our part which is not determined by its object James is willing to a l mit that our consciousness of freedom may be a delusion Even in effortless volition we have the consciousness of the alternative being also possible This is surely a delusion here he writes why is it not a delusion everywhere? Hence it seems to him that the question of free will is insoluble on strictly psychological grounds

But if the existence of free will cannot be proved from experience neither in his opinion can determinism be scientifically demonstrated The most that any argument can do for deter minism he says is to make it a clear and se ductive conception which a man is foolish not to espouse so long as he stands by the reat scientific postulate that the world must be one unbroken fact and that prediction of all things without exception must be ideally if not ac tually possible For those who accept this postulate a little fact like effort can form no real exception to the overwhelming reign of deterministic law

Yet it remains a postulate and postulation is not proof Furthermore there is a *moral* pos tulate about the Universe which would lead one to espouse the contrary view the pos tulate that *what ought to be can be and that bad acts cannot be fated but that good ones must be possible in their place* As scientific law and pre diction seem to call for the postulate of deter minism so moral responsibility and the genuine ness of moral options seem to demand free will

Hume recognizes that it may be said that if voluntary actions be subjected to the same laws of necessity with the operations of matter there is a continued chain of necessary causes pre ordained and pre determined reaching from the original cause of all to every single volition of every human creature But he does not think that the assertion of no con tingency anywhere in the universe no indif ference no liberty requires us to give up our notions of moral responsibility and to abstain from making judgments of praise or blame con cerning human actions The mind of man is so formed by nature he writes that upon the appearance of certain characters dispositions, and actions it immediately feels the sentiment of approbation or blame The characters which engage our approbation are chiefly such as con tribute to the peace and security of human so ciety as the characters which excite blame are

chiefly such as tend to public detriment and disturbance

In Hume s opinion remote and uncertain speculations concerning the causation of human character or conduct or concerning the general structure of the universe do not affect the sentiments which arise from the natural and immediate view of the objects Why sh uld not the acknowledgement of a real distinction between vice and virtue he asks be reconcileable to all speculative systems of philosophy as well as that of a real distinction between personal beauty and deformity? James takes the exa tly opposite view A doctrine of necessity or determinism is for him incompatible with moral responsibility or with the dis t nction between virtue and vice Holding that free will is indispensable to the moral life James chooses the alternative of freedom In doing so he confesses that the grounds of his opinion are ethical rather than psychological

He does go one step further into what he calls the lo ic of the question Since postulation is not proof—since a postulate is not an undeniable axiom but an expression of what James elsewhere calls the will to bel eve —the kind of dilemma whi h is formed by conflicting postulates can be resolved only by the exercise of free choice The alternatives of free will and determinism constitute that kind of dilemma for James and so it seems to him quite proper that the first act of free will should be to believe in free will.

When scientific and moral postulates var thus with each other he writes and objective proof is not to be had the only course is voluntary choice for skepticism itself if systematic s also voluntary choice Hence belief in free will should be voluntarily chos n from amon st other possible bel efs F eedom s fi st deed *should be to affirm itself We ought never* to hope for any other method of getting at the truth if indetermin sm be a fact Doubt of this particular truth will therefore probably be open to us to the end of time and the utmost that a believer in free will can *ever* do will be to show that the deterministic arguments are not coercive That they are seductive James concludes I am the last to deny nor do I deny that effort may be needed to keep the faith in freedom when they press upon it upright n the mind

IN THE TRADITION OF THE great books not all who affirm free will think that to do so requires them to deny the universal reign of causality in nature nor do they base their affirmation on our immediate consciousness of free choice or make it an act of faith—a pragmatic postulate Kant for example explicitly disclaims that freedom is a matter of faith It is the only one of all the ideas of pure reason he says whose object is a matter of fact This means for him that its objective reality can be proved In contrast the existence of God and the immortality of the soul are matters of faith by which Kant means that they must be postulated by the practical reason as conditions necessary for the conceivability of the *summum bonum* which the moral law command us to seek

In order to understand Kant s proof of freedom it is necessary to remember that he conceives the freedom of the will in terms of its autonomy and its autonomy in terms of the fact that the practical reason with which the pure will is identical legislates for itself in proclaiming and obeys only itself in upholding the moral law Autonomy of the will he writes is that property of it by which it is a law unto itself Now the idea of freedom is inseparably connected with the conception of *autonomy* and this again with the universal principle of morality The moral law Kant goes on expresses nothing else than the *autonomy* of the pure practical reason and this *self legislat on* of the pure and therefore practical reason is freedom in the positive sense

In say ng that a free will and a will subject to moral laws are one and the same Kant thinks that he may be suspected of circular reasoning in that he appears to make freedom a condition of morality and at the same time to infer freedom from the existence of the moral law *There is no qu stion that for him freedom* must be the foundat on of all moral laws and the consequent responsibility But he explains no inconsistency results from calling freedom the condition of the moral law and al o maintaining that the moral law is the condit on under which we can first *become conscious* of freedom if it be understood that freedom is the *ratio essend* [ground of being] of the moral law wh le the moral law is the *rat o cognoscendi* [ground of knowing]

We know that our will is free from knowing the existence of the moral law We know that the moral law exists for otherwise reason could never judge as it does that we ought to have done what we did not do It is not freedom but the moral law of which we become directly conscious (as soon as we trace for ourselves maxims of the will) This Kant says first presents itself to us and leads directly to the concept of freedom Whenever a man judges that he can do a certain thing because he is conscious that he ought then according to Kant he recognizes that he is free a fact which but for the moral law he would never have known

The freedom which Kant thinks can be directly deduced from the moral law is a very special kind of causality In the sensible world of nature each cause is in turn the effect of some prior cause None is the first or unconditioned cause an uncaused cause But for Kant freedom is a faculty of absolute spontaneity and consists in the unconditioned causality of the cause a causality capable of producing effects independently of and even in opposition to the power of natural causes and capable consequently of *spontaneously* originating a series of events

How are these two modes of causality—which Kant calls the causality of *nature* and of *freedom* —compatible with one another? To affirm both would appear to get us into the antinomy in which the thesis that causality according to the laws of nature is not the only causality a causality of freedom is also necessary is contradicted by the antithesis that there is no such thing as freedom but everything in the world happens solely according to the laws of nature Yet Kant thinks he can show that this antinomy is based upon a mere illusion and that nature and freedom are at least *not opposed*

It would be impossible he admits to escape this contradiction if the thinking subject which seems to itself free conceived itself in *the same sense* or in *the very same relation* when it calls itself free as when in respect to the same action it assumes itself to be subject to the laws of nature But the contradiction is only apparent or illusory if man belongs to two worlds—the sensible world of natural phenomena and the supersensible world of intelligible beings or noumena The notion of a being that has free will writes Kant is the notion of a *causa noumenon* —of a cause which does not operate under the temporal conditions of natural causality The notion of causality as *physical necessity* concerns only the existence of things so far as it is determinable *in time* and consequently as phenomena in opposition to their causality as things in themselves

To remove the apparent contradiction between freedom and the mechanism of nature in one and the same action we must remember that the necessity of nature which cannot coexist with the freedom of the subject appertains only to the attributes of the thing that is subject to time conditions consequently only to those of the acting subject as a phenomenon

But the very same subject Kant continues being on the other side conscious of himself as a thing in himself considers his existence also *in so far as it is not subject to time condition* and regards himself as only determinable by laws which he gives himself through reason

In the latter mode of supersensible existence man exercises the causality of a free will He is not in any way subject to the natural necessity which governs all physical things Yet the two worlds—the moral world of freedom and the physical world of necessity—meet in the same act The rational being Kant explains can justly say of every unlawful action that he performs that he could very well have left it undone although as appearance it is sufficiently determined in the past and in this respect is absolutely necessary

The apparent conflict between freedom and nature arises for Kant because he conceives the act of free will to be absolutely spontaneous It is as uncaused as the swerve of the atoms (discussed in the chapter on Chance) on which Lucretius bases the existence of free will There is another conception of freedom that does not attribute to free will any special character which brings it into conflict with ordinary causality It does not belong to liberty Aquinas thinks that what is free should be the first cause of itself Not only is God the ultimate cause of what a man freely chooses to do as He is the first cause of every natural event but the will as a natural faculty of man never moves itself to

operation It is always moved by the reason even in its acts of choice and so these acts wherein the will is free are also caused

Where Kant identifies will with free will (which implies that the will is free in all its acts) Aquinas distinguishes between those acts of the will which are necessitated and those which are free He quotes Augustine to the effect that natural necessity does not take away the liberty of the will for that liberty exists only in the will s choice of means not in its volition of the end Just as the intellect naturally and of necessity adheres to first principles Aquinas explains so the will adheres to the last end And just as the intellect assents of necessity to those propositions which have a necessary connection with first principles namely demonstrable conclusions so the will adheres of necessity only to those things which have a necessary connection with happiness With regard to all else—the whole realm of particular goods which are merely contingent means—the will is not necessitated and so its choice among them is free

Although Aquinas says that unless man has free choice counsels exhortations commands prohibitions rewards and punishments would be in vain he does not postulate free will as an indispensable condition of moral conduct Rather he shows how reason in causing the will s choices at the same time leaves them free The root of liberty he writes is the will as the subject thereof but it is the reason as its cause For the will can tend freely towards various objects precisely because the reason can have various perceptions of good When for example the deliberating reason is indifferently disposed to opposite things the will can be inclined to either The freedom of the will s choice with respect to particular means thus lies in the fact that with respect to all contingent matters the judgment of reason may follow opposite courses and is not determinate to one

In all particular goods Aquinas writes the reason can consider an aspect of some good and the lack of some good which has the aspect of evil and in this respect it can apprehend any single one of such goods as something to be chosen or to be avoided The perfect good alone which is happiness cannot be apprehended by reason as an evil or lacking in any way Consequently man wills happiness of necessity nor can he will not to be happy or to be unhappy Now since choice is not of the end but of the means it is not of the perfect good which is happiness but of particular goods Therefore man chooses not of necessity but freely

Like Aquinas Locke holds that to be determined by our own judgment is no restraint to liberty But where Locke thinks the constant determination to a pursuit of happiness no abridgment of liberty Aquinas holds that because man wills happiness of necessity his will is not free in the volition of its natural end Yet Locke does mention the case wherein a man is at liberty in respect of willing —the case in which a man may suspend the act of his choice from being determined for or against the thing proposed till he has examined whether it be really of a nature in itself and consequences to make him happy or not

In this type of case Aquinas locates what is peculiar to the causality of freedom Sometimes the judgment of reason is determined by its object as when it contemplates the final end of actions But when it deliberates about alternative means (which are both particular and contingent) reason can judge either way What determines it to judge this way rather than that? Aquinas answer is that such judgments of the reason are voluntary in contrast to reason s involuntary assent to self evident truths wherein it is determined entirely by the object being considered But if a voluntary judgment is one in which the will determines the reason s assent and if reason s judgments concerning means are voluntary in this sense then the act of the reason which causes the will s act of choice is itself an act caused by the will The will s choice is therefore not uncaused but as Aquinas conceives it the way in which it is caused makes it self determining and to this extent free

THE GENERAL THEORY OF the will figures most prominently in the theology of Aquinas and in the philosophy of Kant and Hegel They not only present the most elaborate analyses of its nature and its relation to reason but in the tradition of the great books they are the most stalwart defenders of its freedom Their differ

ences in principle and in reasoning may how ever obscure the common ground they share

This may be seen in their conception of free dom Aquinas does not attribute autonomy or spontaneity to the will Yet in his view of free choice as a self determining act of the will there is something analogous to Kant s autonomy and where Kant makes the pure will essentially free and spontaneous Aquinas holds that the will with respect to willing or not willing is always free and inviolable It is absolutely with in the power of the will he writes not to act and not to will He does not try to explain such freedom of exercise in the same way as freedom of choice

It is only with regard to the latter that Aquinas appeals to the causal reciprocity be tween reason and will to show how the will s act of choice can be both free and caused The kind of causation which Aquinas thinks takes place in free choice—the will determining the reason to make the practical judgment by which it is itself determined—seems to involve a circularity or perhaps simultaneity in action and reaction If this is possible only because reason and will are *spiritual* powers then here too there is some likeness to Kant s theory of the will s action as belonging to the super sensible world rather than to the domain of physical movement

On one other point they tend to agree even more plainly Free choice writes Aquinas is part of man s dignity Man s dignity for Kant—his membership in what Kant calls the kingdom of ends —is rendered possible by the *freedom of the will* But though they share this opinion of the source of human dignity in rationality and freedom they do not draw the same moral consequences from their affirmation of free will as pivotal in human life

Aquinas like Aristotle does not find moral goodness only in the will On the contrary the rectitude of the will depends on the goodness of the end it adheres to and the means it chooses. But like the Stoics Kant makes the will the sole repository of moral goodness

As Epictetus says that all good and evil lie in man s will and that the morally neutral sphere is in the region outside the will s control so Kant begins his moral philosophy with the state ment Nothing can possibly be conceived in the world or even out of it which can be called good without qualification except a Good Will In his view a good will is good not because of what it performs or effects not by its aptness for the attainment of some proposed end but simply by virtue of the volition *that is it is* good in itself In another place he adds that though not indeed the sole and complete good the will *good in itself* must be the supreme good and the condition of every other even of *the desire of happiness*

These fundamental issues concerning the will in moral philosophy are more fully treated in the chapter on DUTY The problems of the will in political theory are considered in the chap ters on LAW and STATE—especially those prob lems which involve the concept of the sovereign will and the distinction of the particular will and the *general* will the majority will and the will of all The strictly theological problems concerning God s freedom and man s freedom in relation to God s will are also *reserved* for treatment elsewhere

Chapter 101 WISDOM

INTRODUCTION

THE special character of wisdom among the attainments of the mind shows itself in the things which everyone will agree can be said about wisdom—things which cannot be said about art and science or knowledge and learning generally We believe that with the centuries knowledge can be steadily increased and learning advanced but we do not suppose that the same progress can be achieved in wisdom The individual may grow in wisdom The race does not seem to

In the tradition of the great books the moderns usually assert their superiority over the ancients in all the arts and sciences They seldom claim superiority in wisdom The phrase modern science needs no elucidation but if anyone were to speak of modern wisdom he would have to explain his meaning As modern seems to have an immediately acceptable significance when it qualifies science so ancient seems to go with wisdom and to suggest that with the centuries far from increasing wisdom may be lost

Wisdom is more frequently and extensively the subject of discussion in the ancient and mediaeval than in the modern books The ancients seem to have not only a greater yearning for wisdom but also a greater interest in understanding what wisdom is and how it can be gained The traditional discussion of wisdom furthermore has its foundations in the literature of the Old and the New Testament as well as in the books of pagan antiquity

This is not true of other forms of knowledge The teachings of revealed religion open a path to the heart of wisdom They do not propose methods of scientific research Again and again the Scriptures proclaim that fear of the Lord is the beginning of wisdom —a wisdom which develops with piety and worship as science develops with experiment and proof

Still another distinctive mark of wisdom is that it cannot be misused We recognize that bad men as well as good may possess other kinds of knowledge We have seen artistic skill and scientific truth put to evil use But we do not ordinarily think a man wise unless he acts wisely To act wisely is to act well even as to have wisdom is to use it The satirist s praise of folly condemns a useless wisdom The theologian s condemnation of worldly wisdom dismisses it as the worst of folly—a counterfeit of wisdom

Other forms of learning may separate knowledge from action wisdom tends to unite them Other forms of inquiry may be content with knowing and understanding the facts the pursuit of wisdom aspires to a knowledge of good and evil Plato for example makes the vision of the good the goal of a dialectic which ascends to wisdom yet which does not rest there but returns enlightened to the realm of action This conception of wisdom is hinted at wh never we refrain from calling a man wise simply because he is learned—a scholar scientist or philosopher

Again it is Plato who respects wisdom so highly that he will not call the philosopher wise but only a lover of wisdom No god is a philosopher or seeker after wisdom for he is wise already Socrates says in the *Symposium* nor does any man who is wise seek after wisdom Neither do the ignorant seek after wisdom The lovers of wisdom are neither the wise nor the ignorant and foolish As Socrates points out they are in a mean between the wise and the ignorant

Aristotle would seem to disagree not from a lower regard for wisdom but because he identifies wisdom with philosophical knowledge and especially with that highest branch of speculative science which is called theology first philosophy or metaphysics His use

of the phrase philosophical wisdom to distinguish speculative from practical or political wisdom suggests that the philosopher may attain the wisdom he pursues Yet Aristotle like Plato speaks of philosophers or lovers of wisdom and Plato like Aristotle treats wisdom as one of the basic human virtues

WE SHALL RETURN TO THE distinction which both Aristotle and Aquinas make between practical and speculative wisdom they often call the latter simply wisdom in contrast to prudence which is their name for practical wisdom Other writers who treat wisdom as on sometimes emphasize its speculative and sometimes its practical aspect But for all of them this double aspect remains part of wisdom s special character

Lucretius for example finds nothing more gladdening than to dwell in the calm high places firmly embattled on the heights by the teaching of the wise whence you can look down on others and see them wandering hither and thither going astray as they seek the way of life The way of life free from pain the distress of fear and futile struggle is known only to the wise Calm and repose are here suggested as attributes of the wise man That also seems to be the implication of Dr Johnson s approbation of one who had attained to the state of the philosophical wise man that is to have no want of anything When Boswell observes that th n the savage is a wise man Johnson re to ts Sir I do not mean simply being without —but not having a want

For Plotinus wisdom seems to be purely speculative and its repose a condition of the reasoning mind at rest Wisdom he writes is a condition in a being that possesses repose Think what happens when one has accomplished the reasoning process as soon as we have discovered the right course we cease to reason We rest because we have come to wisdom Still wisdom has a moral or for Plotinus an aesthetic aspect One Soul he says is wise and lovely another foolish and ugly Soul beauty is constituted by wisdom

The practical or moral aspect of wisdom predominates in Milton Rabelais and Tolstoy In *Pa d se Lost* Adam communicates his reflections on human knowledge to Raphael

But apte the Mind or Fancie is to roave
Uncheckt and of her roavi g is no end
Till warn d or by experience taught she learn
That not to kno at large of things remote
From use obscure and suttle but to kno
That which before us lies in daily life
Is the prime Wisdom what is more is fume,
Or emptiness or fond impertinence
And renders us in things that most concerne
Unpractis d unprepar d and still to seek.

Gargantua writing a letter to his son Pantagruel while the latter is a student in Paris admonishes him in the words of Solomon that Wisdom entereth not into a malicious mind and that knowledge without conscience is but the ruin of the soul In *War and Peace* Pierre after reiterating that All we can know is that we know nothing And that s the height of human wisdom learns from the Mason that the highest wisdom is not founded on reason alone nor on those worldly sciences of physics chemistry and the like into which intellectual knowledge is divided The highest wisdom the Mason continues is but one science—the science of the whole—the science explaining the whole creation and man s place in it To re c ive that science it is necessary to purify and renew one s inner self And to attain this end we have the light called conscience that God has implanted in our souls

Though Plato defines wisdom as the virtue o reason—that part of the soul which is for him the faculty of knowledge—he gives it the function of directing conduct as well as contemplating truth Him we call wise Socrates declare in the *Republic* who has in him that littl part which rules and which has a knowledg of what is for the interest of each of the thre parts and of the whole In the state as in th soul how can there be the least shadow o wisdom the Athenian Stranger asks in th *Laws* where there is no harmony?

There is no harmony or wisdom when fa reasonings have their habitation in the sou and yet do no good but rather the reverse c good because reason fails to rule or be obeyed When the soul is opposed to knowledge c opinion or reason which are her natural lords th Athenian Stranger goes on that I ca folly just as it is in the state when the mult tude refuses to obey their rulers or the laws.

The four virtues which Plato

in both the *Republic* and the *Laws* are wisdom temperance courage justice Justice is given a certain preeminence in the *Republic* as some how embracing the other three but in the *Laws* the ruling virtue is wisdom Calling the virtues divine goods to distinguish them from such things as health beauty strength and wealth the Athenian Stranger makes wis dom chief and leader of the divine class of goods Next he says follows temperance and from the union of these two with courage springs justice and fourth in the scale of virtue is coura, As the principle of these other vir tues wisdom like them engages in the life of action It does not move solely in the realm of thought

WHEN HE REFERS TO WISDO 1 as one of the four virtues Aristotle uses the word wisdom as if it named a single virtue In the passage in the *Politics* in which he says that the courage justice and wisdom of a state have the same form and nature as the qualities which give the individual who possesses them the name of just wise or temperate he does not divide wisdom into the speculative and the practical But he seldom overlooks that separation The passage just cited for instance begins with the statement that each one has just so much hap-piness as he has of virtue and wisdom and of virtuous and wise action

Here the reference to virtue *and* wisdom places wisdom outside the virtues when the latter are conceived exclusively as *moral* vir tues Wisdom for Aristotle is a virtue only in the order of intellectual excellence not of moral excellence or character As an intellectual vir tue wisdom is not even involved in the growth or exercise of the moral virtues It is as possible Aquinas says following Aristotle to have the cardinal moral virtues without wisdom as it is to have them without art or science But for both Aquinas and Aristotle this is neither true nor intelligible unless we bear in mind the dis tinction between philosophical and practical wisdom or between wisdom and prudence

Though prudence is no less than wisdom an intellectual virtue—a quality of mind rather than of character—it belongs with the moral virtues As the chapter on VIRTUE ind cates the cardinal virtues according to Aquinas in clude prudence not wisdom Similarly as may be seen in the chapter on PRUDENCE Aristotle's theory holds it impossible to be good without practical wisdom just as it is impossible to be practically wise without moral virtue

Practical wisdom Aristotle writes is con cerned with things human and things about which it is possible to deliberate Philosophic wisdom on the other hand will contemplate none of the things that make a man happy To explain the difference Aristotle uses the ex ample of the early Greek sages We say Anax agoras Thales and men like them have phil osophic but not practical wisdom when we see them ignorant of what is to their own advan tage They know things that are remark able admirable difficult and divine but use-less ıı because it is not human goods they seek

If wisdom connotes the highest form of knowledge then the name according to Aris totle is more properly applied to speculative than to practical wisdom The highest form of knowledge in his view is concerned with the highest objects Hence he says it would be strange to think that practical wisdom is the best knowledge since man is not the best thing in the world But if the argument be that man is the best of the animals this makes no difference for there are other things much more divine in their nature than man and wisdom is knowledge of the things that are highest by nature

When Hobbes distinguishes between pru dence and sapience he does not assign a pecial object to wisdom As much experience is *Pru dence* he writes so is much science *Sapi ence* It is the amount of science a man posses ses not his possession of a particular kind of knowledge which makes him wise Descartes seems to take a similar view when he says that the sciences taken all together are identical with human wisdom But for Aristotle and Aquinas philosophical wisdom can be differen tiated from the other speculative virtues such as the understanding of first principles or the scientific knowledge of the conclusions which can be demonstrated from them It involves them but it is distinct from them insofar as it uses principles to demonstrate conclusions con cerning the highest causes Wisdom can be

called a science if it is understood that by reason of its object it stands at the apex of the sciences crowning and perfecting them

In the opening pages of his *Metaphysics* Aristotle identifies wisdom with the supreme philosophical science—the science which inves tigates first principles and causes He calls it a divine science or theology for as he says God is thought to be among the causes of all things and to be a first principle It is not the most useful science but the most desirable on its own account and for the sake of knowing It alone exists for its own sake All the sciences indeed are more necessary than this but none is better

While adopting Aristotle s conception of wis dom Aquinas finds it most eminently repre sented among the sciences not by metaphysics or the theology of the philosophers but by sacred doctrine or the theology based on reve lation Since it is the part of a wise man to order and to judge he writes and since lesser matters can be judged in the light of some higher cause therefore he who considers absolutely the highest cause of the whole uni verse namely God is most of all called wise But sacred doctrine essentially treats of God viewed as the highest cause for it treats of Him not only so far as He can be known through creatures just as the philosophers know Him but also so far as He is known to Himself alone and revealed to others Hence Aquinas concludes sacred doctrine is especially called wisdom

THE CONTRAST BETWEEN THE wisdom of the philosopher and the wisdom of the theologian is more fully discussed in the chapters on METAPHYSICS and THEOLOGY But we are concerned here with the further implications of the differ ence between natural and supernatural wisdom or the wisdom of man and of God

The Greeks insistently raise the question whether man can have wisdom In the *Apology* Socrates tells his accusers that his cross exami nation of the pretenders to wisdom was a duty imposed upon him by the oracle which declared that there was no man wiser than himself To understand the oracle s meaning he tried to seek out wisdom in other men but he says at his trial I found that the men most in repute were all but the most foolish This gave him an insight into the kind of wisdom which he himself possessed

My hearers always imagine Socrates de clares that I myself possess the wisdom whi h I find wanting in others but the truth is O men of Athens that God only is wise and by his answer he intends to show that the wisdom of men is worth little or nothing he is not speak ing of Socrates he is only using my name by way of illustration as if he said He O men is the wisest who like Socrates knows that his wisdom is in truth worth nothing Again in the *Phaedrus* Socrates refuses to call any man wise for that is a great name which belongs to God alone For men lovers of wisdom or philosophers is the modest and befitting title

Aristotle also says of the science which most deserves the name of wisdom because it is a science of divine things that such a science either God alone can have or God above all others He does not think that the divine power can be jealous but if there were any truth in what the poets say about the jealousy of the gods it would probably occur in this case above all and all who excelled in this knowledge would be unfortunate To what ever extent the possession of wisdom might be justly regarded as beyond human power it would be unfitting in Aristotle s opinion for man not to be content to seek the knowledge that is suited to him

This is even more typically a Christian than a pagan sentiment Christians have a special knowledge writes Montaigne how natural and original an evil curiosity is *in man the* thirst of knowledge and the desire to become more wise was the first ruin of human kind and the way by which it precipitated itself in eternal damnation In *Pa adise Lost* as he is about to leave the Garden of Eden Adam sav to the angel Michael

Greatly instructed I shall hence dep rt
Gre tly in pea e of thou ht and have my fill
Of knowledge what th s ve sel can containe
Bey d wh ch was my folly to aspire

To which the angel replies

This having learnt thou ha t attai ed th summe
Of w sdom

But Sacred Scripture does more than enjoin man to humble himself before the

tween human wisdom at its best and the infinite wisdom of God It does more than say in the words of Jeremiah Let not the wise man glory in his wisdom for it also says that fools despise wisdom In the Epistle of James we find true wisdom set apart from false If the knowledge of the wise man is not accompanied by the *meekness of wisdom if instead there is bitter envying and strife in your hearts* then this wisdom descendeth not from above but is earthly sensual devilish But the wisdom that is from above is first pure then peaceable gentle and easy to be intreated full of mercy and good fruits without partiality and without hypocrisy

St Paul asks *Hath not God made foolish* the wisdom of this world? When

> the world by wisdom knew not God it pleased God by the foolishness of preaching to save them that believe
>
> *For the Jews require a sign and the Greeks seek* after wisdom
>
> But we preach Christ crucified unto the Jews a stumbling block and unto the Greeks foolishness
>
> But unto them which are called both Jews and Greeks Christ the power of God and the wisdom of God
>
> Because the foolishness of God is wiser than men and the weakness of God is stronger than men

My speech and my preaching St Paul continues to the Corinthians

> *was not with enticing words of man s wisdom* but in demonstration of the Spirit and of power
>
> That your faith should not stand in the wisdom of men but in the power of God
>
> Howbeit we speak wisdom among them that are perfect yet not the wisdom of this world nor of the princes of this world that come to nought
>
> But we speak the wisdom of God in a mystery even the hidden mystery which God ordained before the world unto our glory

Wonder is the beginning of the kind of natural wisdom which a philosopher like Aristotle regards as the ultimate goal of human inquiry But the supernatural wisdom of which Scripture speaks begins with the fear of God and comes to man not through his efforts at learning but only as a divine gift *If any of you* lack wisdom St James declares let him ask God that giveth to all men liberally and upbraideth not and it shall be given him It is *wrong for a man to take pride in his own learning* but according to Pascal the proper place for pride if in wisdom for it cannot be granted to a man that he has made himself wise God alone gives wisdom and that is why *Qui gloriatur in Domino glorietur*

The theologians dwell at length on the text of the Psalmist that the fear of the Lord is the *beginning of wisdom Enumerating* seven steps to wisdom Augustine writes First of all it is necessary that we should be led by the *fear of God* to seek the knowledge of His will what He commands us to desire and what to avoid Now this fear will of necessity excite in us the thought of our mortality and of the death that is before us and crucify all the motions of pride as if our flesh were nailed to the tree *Then in* succession come the steps of piety knowledge resolution counsel purification of heart and finally the holy man will be so single and so pure in heart that he will not step aside from the truth *either for the* sake of pleasing men or with a view to avoid any of the annoyances which beset this life Such a man ascends to *wisdom* which is the seventh and *the last step* and which he enjoys in peace and tranquility

Only the wisdom which begins with faith according to Aquinas also begins with fear A thing may be called the beginning of wisdom in two ways *he explains* in one way because it is the beginning of wisdom itself as to its essence in another way as to its effect Thus the beginning of an art as to its essence consists in the principles from which that art proceeds while the beginning of an art as to its effect is that wherefrom it begins to operate *Aquinas* then points out that wisdom is considered by theologians in one way and in another way by philosophers As the wisdom of the philosophers does not begin with articles of faith but *with axioms of reason so it does not begin* with fear but with wonder

The wisdom of the philosophers and the wisdom of the religious both consist in knowledge of divine things but wisdom as we look at it Aquinas writes is considered not only as being cognizant of God as it is with the philosophers, *but also as directing human conduct* since this *is directed not only by the* human law but by the divine law Accordingly the beginning of wisdom as to its essence consists in the first principles of wisdom *i e* the *articles* of faith

and in this sense faith is said to be the beginning of wisdom. But as regards the effect the begin nin of wisdom is the point where wisdom be gins to work and in this way fear is the begin ning of wisdom yet servile fear in one way and filial fear in another

For servile fear Aquinas explains is like a principle disposing a man to wisdom from without in so far as he refrains from sin through fear of punishment and is thus fashioned for the effect of wisdom On the other hand chaste or filial fear is the beginning of wisdom as be ing the first effect of wisdom For since the reg ulation of human conduct by the divine law belongs to wisdom in order to make a begin ning man must first of all fear God and submit himself to Him

The special character of wisdom which we noted earlier—that it is at once speculative and practical knowledge that it is concerned both with the ultimate nature of things and the ulti mate good for man—seems to be strikingly ex emplified in what the theologian calls the gift of wisdom. Wisdom as Plato conceives it may have this double character but for Aristotle as we have seen wisdom as opposed to prudence is purely speculative It remains speculative even when it deals with the end which is the good of each thing and in general with the su preme good in the whole of nature It con siders the end or the good as Aristotle indi cates only under the aspect of investigating the first principles and causes for the good *i e* the end is one of the causes It does not thereby direct man to his own end or lay down the rules of a good life

The supernatural gift of wisdom Aquinas tells us is not merely speculative but also prac tical It belongs to wisdom as a gift not only to contemplate divine things but also to regulate human acts Such infused wisdom not only extends to the hidden mysteries of d vine things which are beyond the greatest w sdom man can acquire by his natural efforts but this wisdom also dire ts man s actions to the sov ereign good which is the last end by knowing which man is said to be truly wise

CHRISTIAN THEOLOGIANS LIKE Augustine and Aquinas do not hold the wisdom of the phi losophers in contempt because they fail to pene trate the divine mysteries, or to guide man to his salvation Augustine finds in Plato s teach ing a marvellous foreshadowing of Christian wisdom It is evident that none come nearer to us than the Platonists he says when he attrib utes to Plato the conception of the wise man as one who imitates knows loves this God and who is rendered blessed through fellowship with Him in His own blessedness Though Aquinas holds that wisdom as a gift is more excellent than wisdom as an intellectual virtue since it attains to God more intimately by a kind of union of the soul with Him he certainly re gards Aristotle as the epitome of natural wis dom when he refers to him as *the* philosopher

The admonition of St Paul, to beware lest any man spoil you through philosophy and vain deceit after the tradition of men after the ru diments of the world does not seem to be in terpreted by Augustine and Aquinas to mean as Montaigne later suggests that the plague of man is the opinion of wisdom and for this reason it is that ignorance is so recommended to us by our religion But the theologians do con demn the counterfeits of wisdom to which men are susceptible These are false wisdoms the wisdom of the philosophers is not false but imperfect

We find three types of false worldly wisdom listed by Aquinas If a man fixes his end in ex ternal earthly things he writes his wisdom is called *earthly* if in the goods of the body it is called *sensual* wisdom if in some excellence it is called *devilish* wisdom becaus it imitates the devil s pride These worldly wisdoms consti tute for him the sin of folly It is the wisdom of the world Aquinas says which deceives and makes us foolish in God s sight Though no man wishes to be a fool he adds yet he wishes those things of which folly is a conse quence *viz* to withdraw his sense f om spiritual things and to plunge it into earthly things The essence of such folly according to the Psalmist lies in denial The fool hath said in his heart There is no God

But there is another meaning of folly in which it is neither a sin nor the opposite of wis dom If any man among you seem to be wise in this world St Paul declares let him be come a fool that he may be wise Commenting on this text Aquinas explains that just as

is an evil wisdom called *worldly wisdom* so too there is a good folly opposed to this evil wisdom whereby man despises worldly things If there is wisdom in such folly so also according to Aquinas there can be wisdom in those whom the world regards as natural fools or innocents If they have grace he writes baptized idiots like little children have the habit of wisdom which is a gift of the Holy Ghost but they have not the act on account of the bodily impediment which hinders the use of reason in them

Throughout the tradition of the great books those who praise folly do not take exception to the Psalmist s remark that only fools despise wisdom Rather they find wisdom in the appearances of folly and use the wisdom of fools to expose the folly of those who pretend to be wise I every day hear fools say things that are not foolish Montaigne declares and echoing him Touchstone the clown in *As You Like It* complains The more pity that fools may not speak wisely what wise men do foolishly To which Celia replies By my troth thou sayest true for since the little wit that fools have was silenced the little foolery that wise men have makes a great show And later after a conversation with Touchstone about the passing of time Jacques observes When I did hear the motley fool thus moral on the time my lungs began to crow like chanticleer that fools should be so deep contemplative

The jesters and clowns in Shakespeare s comedies have a kind of wisdom In *Twelfth Night* the clown who banters with Viola denies that he is the Lady Olivia s fool but says he is simply her corrupter of words The trouble he explains is not that he lacks reason but that words are grown so false that I am loath to prove reason with them and he ends by telling Viola Foolery sir does walk about the orb like the sun it shines everywhere I would be sorry sir but the fool should be as oft with your master as with my mistress I think I saw your wisdom there

Pantagruel persuades Panurge to take counsel of a fool The wise may be instructed by a fool he says You know how by the advice and counsel and prediction of fools many kings princes states and commonwealths have been preserved battles gained and diverse doubts of a most perplexed intricacy resolved As he who is called a worldly wise man Pantagruel goes on to remark may in the second judgment of the intelligences which are above be esteemed a fool so he may be thought a sage who lays quite aside those cares which are conducible to his body or his fortunes All which neglects of sublunary things are vulgarly imputed folly

To the same general effect are Pierre s reflections in *War and Peace* on the period of his blissful insanity after the burning of Moscow When he recalls the views he formed of men and circumstances at the time of his madness he always finds them correct I may have appeared strange and queer then he says to himself but I was not so mad as I seemed On the contrary I was wiser and had more insight than at any other time and understood all that is worth understanding in life because because I was happy

Folly is not always praised in paradox nor is it seriously condemned only by the Christian theologian who equates it with denying or turning away from God Folly eldest of Jove s daughters says Agamemnon in the *Iliad* shuts men s eyes to their destruction She walks delicately not on the solid earth but hovers over the heads of men to make them stumble or to ensnare them Time was when she fooled Jove himself Agamemnon concludes the story of Jove s befuddlement by relating how in his rage Jove caught Folly by the hair and swore a great oath that never should she again invade starry heaven and Olympus for she was the bane of all Then he whirled her round with a twist of his hand and flung her down from heaven so that she fell on the fields of mortal men

On the earthly plane folly takes many forms of which in Montaigne s judgment the most exasperating are dullness of wit the boldness of stupidity and contentiousness in argument Obstinacy of opinion and heat in argument are the surest proofs of folly he observes Is there anything so assured resolute disdainful contemplative serious and grave as the ass?

Whatever the forms or aspects of folly and however the wisdom it implies or opposes be conceived one thing is clear throughout the

tradition of western thought No one who can separate true wisdom from folly in disguise places anything but the highest value on it in the order of human goods

The final utterance of the Chorus in *Antigone* that wisdom is the supreme part of happiness the Aristotelian doctrine that the activity of philosophic wisdom is admittedly the pleasantest of virtuous activities and all the other attributes ascribed to the supremely happy man are evidently those connected with this activity the statement by Plato in his *Seventh Letter* in which he demands that his myth of the philosopher king be taken seriously for the human race will not see better days until either the stock of those who rightly and genuinely follow philosophy acquire political authority or else the class who have political control be led by some dispensation of providence to become real philosophers —all these express the tribute which pagan antiquity pays to wisdom in human life and society

To the Christian—theologian mystic or poet—it is in Heaven with the saints who dwell in God s presence that wisdom like love reigns supreme Nor are these two unconnected As charity is the perfection of the will so wisdom is the perfection of the intellect In the *Divine Comedy* Aquinas explains to Dante when they meet in Paradise how lack of wisdom s order in the mind goes hand in hand with love s disorder He is very low down among the fools the spirit says who affirms or denies without distinction alike in the one and in the other case because it happens that oftentimes the rash judgment bends in false directions and then self love binds the intelligence

With the accent on earth rather than on heaven with reliance upon reason rather than upon faith Spinoza voices a comparable insight that to have wisdom is to love wisely for to know wisely is to love God It is therefore most profitable to us in this life he writes to make perfect the intellect or reason as far as possible and in this one thing consists the highest happiness or blessedness of man for blessedness is nothing but the peace of mind which springs from the intuitive knowledge of God Not only does the highest possible peace of mind arise from this kind of knowledge but he adds from it also necessarily springs the intellectual love of God

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the pa sages referred to For example in **4** HOMER *Iliad* BK II [265 83] **12d** the number **4** is the number of the volume in the set the number **12d** indicates that the pas sage is in section d of page 12

PAGE SECTIONS When the text is printed in one column the letters **a** and **b** refer to the upper and lo er halves of the page For e ample in **53** JAM S *Psy hology* **116a 119b** the passa e begins in the upper half of p ge 116 and ends in the lower half of page 119 When the text is printed in two columns the letters **a** and **b** refer to the upper and lower halves of the left hand side of the page the letters **c** and **d** to the upper and lower halves of the right hand side of the page For example in **7** PLATO *Symposium* **163b 164c** the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164

AUTHOR S DIVISIONS One o more of the main divisions of a work (such as PART BK, CH SECT) are so netimes included in the reference line numbers in brackets are given in cer tain cases *e g Il ad* BK II [265 283] **12d**

BIBLE RE ERENCES The references are to book chapter and verse When the King James and Dou y versions differ in t tle of books or in the numbering of chapters or verses the King James vers on is cited first and the Douay ind cated by a (*D*) follows *e g* OLD TESTA MENT *Nehemiah* 7 45—(*D*) *II Esd as* 7 46

SY BOL The abbrev ation esp calls the eader s attention to one or more especially relevant parts of a whole refe ence passim signifies that the topic is discussed intermit tently rathe than continuously in the work r p ssage cited

For add tional information concerning the style of the references see the Explanation of Refe ence Style fo ge eral guidance in the use of *The Gre t Ideas* consult the Preface

Chapter 102 WORLD

INTRODUCTION

HE who does not know what the world is writes Marcus Aurelius does not know where he is And he who does not know for what purpose the world exists does not know who he is nor what the world is According to the Stoic emperor for whom there is one universe made up of all things and one God who pervades all things man has only to exercise the divine spark of reason in himself in order to be at home in a world which reason rules

He does not hesitate long before the dilemma that it is either a well arranged universe or a chaos huddled together In the belief that it is through and through an orderly world—a cosmos rather than a chaos governed by providence rather than by chance—Aurelius is willing to assume whatever place destiny allots him in the universal scheme Everything harmonizes with me he says which is harmonious to thee O Universe

With a Christian s faith in God s plan and providence Montaigne is also willing to conceive the universe as the stage on which man acts his destined part But suppose Montaigne adds that we consider man alone without foreign assistance armed only with his own proper arms and unfurnished with the divine grace and wisdom which is all his honor strength and the foundation of his being How then does the world appear? Is it in all its vastness the human habitat—the home of man its lord and master?

Man deceives himself Montaigne thinks if he thus pictures the world in term of h s own reason and knowledge What could lead him to bel eve he asks that this adm rable movement of the celestial arch the eternal light of those planets and stars that roll so proudly over his head the fearful motions of that infinite ocean were established and continue so many ages for his service and convenience? Can anythin be imagined so ridiculous as that this miserable and wretched creature who is not so much as master of himself should call himself master and emperor of the world?

If as Montaigne thinks he should man feels and sees himself lodged here in the dirt and filth of the world nailed and riveted to the worst and deadest part of the universe in the lowest story of the house and most remote from the heavenly arch how absurd for him to imagine himself above the circle of the moon and bringing heaven under his feet Except by the vanity of the same imagination by which he equals himself to God how can he regard himself as occupying an exalted position in the universe?

Deprived of the religious faith that he is made in God s image and that all the rest of the visible universe is made for him only presumption or conceit can save man from being dwarfed by the world But science robs man of such conceit according to Freud The cosmology that is associated in our minds with the name of Copernicus displaces man and shrinks him Humanity cannot hold on to its naive self love Freud writes when it realizes that the earth is not the center of the universe but only a tiny speck in a world system of a magnitude hardly conceivable

NOT ONLY IN THE REFLECTIONS of Aurelius, Montaigne and Freud but throughout the tradition of the great books the conception of the world or universe is inseparable from the ideas of God and man These three ideas always interpenetrate each other though the resulting pattern of thought varies according to the direction in which thought moves from any one of the three to the other two

Sometimes the whole universe lies on one

side of the infinite distance between the Creator and His creation and man has a special place of honor in the hierarchy of beings which con stitutes the order of the created world Though man is greater than the earth he treads or the skies he watches the whole world is less than God Who has made it out of nothing and Who in the freedom of His act of creation is unaf fected by the world s coming to be or passing away On this view taken by Christian theo logians, God is not part of the world the world is not part of God nor is there any whole which embraces both and if world means the phys ical totality then man belongs both to this world and to another—the realm of spiritual creatures which is also part of the created uni verse.

Sometimes world means the all embracing universe uncreated and co eternal with the di inity which dwells in it a thing of soul as well as body including mind as well as matter Whether God is the prime mover of the uni verse the transcendent One from which ema nates in all degrees of being the multiplicity of intelligible and sensible things the infinite substance which exceeds the sum of all the finite things that exist only as its modifications or the Absolute Spirit which manifests itself historically in both physical and psychical na ture—on any of these views cosmology merges with th ology as in the theories of Aristotle Plotinus Spinoza and Hegel For Spinoza and Hegel as for the Stoics to know the world is to know God Its order or structure is more than divinely instituted It is the indwelling divinity itself.

Such views of the world tend for the most part to look upon the individual man as a microcosm mirroring the ma rocosm The world s body and soul, its matter and mind are there to be seen in miniature Considering the philosophers who assert that mind is the king of heaven and earth Socrates suggests in the *Philebus that* in reality they are magnifying themsel es Nevertheless the doctrine of a world-soul animating the body of the universe is repeatedly proposed in the dialogues of Plato as a way of understanding man and that mad or at least cryptic Platonist Captain Ahab gazing on th gold doubloon he has na led to the mast as a rewa d for sighting Moby Dick observes in soliloquy that this round gold is but the image of the rounder globe which like a magician s glass to each and every man in turn but mirrors back his own mysterious self

A third alternative remains Sometimes as with Lucretius and later philosophers of a ma terialist cast the world is all there is and all there is of it can be reduced to atoms and the void It is thrown together by blind chance rather than designed by a presiding intelligence The universe obeys no laws except the laws of its own matter in motion Rid of its haughty lords nature according to Lucretius is seen to do all things spontaneously of herself without the meddling of the gods For their own happi ness Lucretius exiles his papier maché gods to the interspaces where they lead a life without care But man is not so fortunate

In a world that is not made for him and in which godless he must be entirely self reliant man is burdened with heavy cares Since he is one of nature s progeny he may not be wholly alien in this world of material forces but neither is he like a beloved son assured of nature s hospitality The dominant note here is that of man *against* the world and in this unequal struggle science alone gives him the sense—or perhaps the illusion—that at least in his little corner of the world his mind may dominate Yet from time to time defeat reminds him that the world remains unruly Bridle its matter and harness its energies as he will he holds no check rein to prevent hi being overthrown

AS THE CHAPTER ON NATURE indicates the word nature in one of its meanings seems to be synonymous with world " This fact as well as the various ways in which world has been used in the foregoing dis ussion requires us to note a certain ambiguity When we speak of the world our meaning may range from the earth or globe wh ch man inhabits to the *solar system* in which our planet revolves and beyond that to the whole physical universe however far flung We also use world to signify an entire realm of things which is distinctively set ap rt from another order of existence as when we speak of material and sp ritual worlds or when we refer to the world of thought or the world of ense Such phrases as world gov rnment and world peace use world in a political sense

which evokes the image of the whole order of human society upon this globe

We shall restrict ourselves in this chapter to that sense of world in which it signifies the object of cosmological speculations and con troversies We are concerned with the idea of the universe or cosmos As we have already ob- served the universe may be quite differently conceived according to the way in which it is related to God but it is almost always con ceived as that totality in which man and his earth and solar system exist and outside of which nothing can exist except God According to the theologians the angelic hierarchies are no exception for they fall within the created universe But philosophers like Plato and Ploti nus who identify the world with the physical universe set apart from it the eternal ideas or the order of the pure intelligences

The traditional issues concerning the world or universe so understood can be summarized by three basic questions Are there many worlds or is there only one? What is the struc ture of the world? Does the world have a be ginning and does it have an end?

The first of these questions seems to violate the meaning of world as *the* universe—the complete totality of things How can there be more than one *all*? But that difficulty as we shall see may be avoided by the hypothesis of a plurality of worlds succeeding one another in infinite time It may even be met by the sup position that the infinity of space permits the possibility of two or more coexistent but un related worlds Considerations of the time and space of the world amplified in the chapters on SPACE and TIME have a bearing on this issue of one or many worlds

The second question presupposes agreement that the world has a structure for if it does not no problem arises concerning what that struc ture is Such agreement is present in the tra dition and is unaffected by the dispute over the role of chance or des gn in the world s produc tion and by the controversy concerning the world s creation As Harvey points out the Greek word cosmos connotes order and beauty Its opposite is chaos.

Writers may disagree about an original chaos prior to the formation of the cosmos Plato for example refers to a time when the elements were all without reason and measure — be fore they were arranged so as to form a uni verse Milton also writes of a time whe yet this world was not and *Chaos* wilde reign where these Heav ns now rowl In the dar illimitable Ocean without bound —before the Heav ns and Earth rose out of *Chaos* — eldest Night and *Chaos* Ancestors of Nature held eternal *Anarchie* In contrast Aristotle maintains that chaos or Night did not exist for an infinite time prior to the world and he argues against the theologians who generate the world from Night

But these differences of opinion leave the main point unaffected The world is a cosmos not a chaos The universe has some order Even those who doubt the perfection of its order or who point out how it is marred by evil and irrationality affirm an order or structure ac cording to which the universe hangs together and is in some degree intelligible to man The disputed question of the world s structure therefore centers on what the structure is. What precisely is the principle or pattern of cosmic coherence? By what image or analogy shall man try to hold the world before his mind as if it were a single intelligible object?

This problem as well as the issue concerning one or many worlds cannot be completely dis- cussed apart from the last of the three questions —the question of the world s beginning and end For example if world follows world in succes sion each must have a beginning and an end So too the world s structure takes on a differ ent aspect for those who affirm and those who deny its creation by a divine intelligence and according to at least one view of the order in the universe men are persuaded that it must be made or ruled by reason and argue against its being the result of chance

But the question of the world s beginning must not be confused with the issue of creation or the problem of the world s relation to God. Aquinas may agree with Berkeley s criticism of the ancient philosophers who maintained the being of a God while holding Matter to be uncreated and co eternal with Him but he does not wholly agree with Hobbes that to say the world was not Created but Eternal (seeing that which is Eternal has no cause) is to deny there is a God For Aquinas to deny cre-

ation is to deny God but whether the created world ever began to be is a question for faith not reason Nor does the denial of creation necessarily imply the eternity of the world—at least not in the sense in which Lucretius imagines the world to have both a beginning and an end.

TWO GREAT EXPONENTS of atomism in the tradition of the great books—Lucretius and Newton—*show us that agreement on some of the* basic questions of cosmology does not preclude disagreement on others Both conceive the world as built of indestructible atomic particles They conceive its structure to be determined by the motions of its parts both large and small through the forces exerted by body upon body *Both furthermore favor the hy*pothesis of a plurality of worlds but only Lucretius holds that this world had a chance beginning and will come to a similar end

When Lucretius refers to the infinite universe which bounded in no direction spreads out free from limit he does not mean this world *in which man now lives He means* the void in which our world as well as other worlds are formed out of the infinite number of atoms which combining and separating cause the birth and death of worlds In no wise can it be deemed probable he writes when space yawns illimitable towards all points and seeds in number numberless and sum unfathomable fly about in manifold ways driven on in ceaseless motion that this single earth and heaven have been brought into being that those bodies of matter so many in number do nothing outside them

The existence of other worlds than this seems probable to him not only because of the infinity of the universe in respect to its space and matter but also because the atoms form each world without purpose without foresight without result As chance produced this world so it can produce others Hence Lucretius argues you must admit that there are elsewhere other combinations of matter like to this which ether holds in its greedy grasp You must admit that in other parts of space there are other earths and various races of men and kinds of wild beasts Moreover in the sum of all there is no one thing which is begotten single in its kind On this principle he thinks you must admit that earth and sun moon sea and all things else are not single in their kind but rather in number past numbering

By calling the atoms eternal bodies and first beginnings Lucretius indicates that it is each particular world not the universe of matter and the void which has a beginning and an end The atoms or first beginnings fall into arrangements such as those out of which this our sum of things has been formed he explains not by design but because many in number and shifting about in many ways throughout the universe they are driven and tormented by blows during infinite time past Thus a world is born and so even does it grow by the addition of bodies from without But as a world *is born and grows* it also *decays and* dies Many bodies ebb away and withdraw from things Lucretius writes but still more must join them until they have touched the utmost point of growth Then piece by piece age breaks their powers and matured strength and wastes away on the side of decay until *finally* in this way *even the walls of the wide* world all around will be stormed and fall to decay and crumbling ruin

According to Newton the atoms are indestructible but not eternal bodies Upon their indestructibility or permanence depends the uniform and enduring texture of nature in all ages That Nature *may be lasting* Newton says the changes of corporeal things are to be placed only in the various separations and new associations and motions of these permanent particles But for Newton the indivisibility of the ultimate particles of matter does not preclude their being created It seems probable to me he *writes that God in the* beginning formed matter in solid massy hard impenetrable movable particles of such size and figures and with such other properties as most conduced to the end for which he formed them

Not through the chance colligation of atoms but through their being variously associated in the first creation by the counsel of an intelligent agent is the world formed For it became him who created them to set them in order And if he did so Newton adds it s unphilosophical to seek for any other origin of the

world or to pretend that it might arise out of a chaos by the mere laws of nature though being once formed it may continue by those laws through many ages

Newton differs from Lucretius in these particulars but shares his view of the probability of many worlds Since space is divisible *in infinitum* and matter is not necessarily in all places it may also be allowed Newton declares that God is able to create particles of matter of several sizes and figures and in several proportions to space and thereby to vary the laws of nature and make worlds of several sorts in several parts of the universe At least he continues I see nothing of contradiction in all this

OTHER WRITERS SEEM TO FIND a plurality of worlds repugnant to reason if not flatly contradictory Plato for example appears to think that the possibility of other worlds is inconsistent with the perfection of this one—certainly if this world is made in the image of the eternal ideas Because the original of the universe contains in itself all intelligible beings Plato s Timaeus argues that there cannot be many worlds but one only if the created copy is to accord with the original It belongs to the world s perfection to be solitary and for this reason Timaeus explains the creator made not two worlds or an infinite number of them but there is and ever will be one only begotten and created Heaven

Aristotle reasons differently to the conclusion that there cannot be more worlds than one The conclusion follows in his view from the impossibility of an infinity of body or matter and with it an infinity of space The universe is certainly a particular and a material thing he writes If it is composed not of a part but of the whole of matter then though the being of universe and of this universe are still distinct yet there is no other universe and no possibility of others being made because all the matter is already included in this He thinks it a tenable hypothesis that the world as a whole includes *all* its appropriate matter hence he concludes neither are there now nor have there ever been nor can there ever be formed more heavens than one but this heaven of ours is one and unique and complete

On theological grounds Augustine challenges those who suppose either that this is not the only world but that there are numberless worlds or that indeed it is the only one but that it dies and is born again at fixed intervals and this times without number On theological grounds also though with a different conception of God and the universe Spinoza maintains that besides God no substance can be or be conceived that God is one which is to say in nature there is but one substance and it is absolutely infinite that all finite things have their existence in the one infinite substance of God and that God is not only the cause of the commencement of their existence but also of their continuance in existence Because God s liberty consists in Spinoza s conception in acting according to the necessity of His own nature not in freedom of will he insists that things could be produced by God in no other way and in no other order than that in which they have been produced This is not merely the only actual but the only possible world

Aquinas agrees that there is only one actual world The very order of things created by God he writes shows the unity of the world Since whatever things come from God have relations of order to each other and to God himself it is necessary that all things should belong to one world Therefore Aquinas continues only those were able to assert the existence of many worlds who do not acknowledge any ordaining wisdom but rather believed in chance as did Democritus who said that this world besides an infinite number of other worlds was made by a coming together of atoms

Aquinas places God s liberty in freedom of choice and so he contemplates the possibility of other worlds than this This is the only world God actually created but since in creating God does not act from natural necessity and since in the act of creation the divine will is not naturally and from any necessity determined to these creatures Aquinas concludes that in no way is the present scheme of things produced by God with such necessity that other things could not come to be

As the chapter on WILL indicates Spinoza holds that God does not have the power of free

choice He therefore argues that the actual world being the only possible one cannot be bettered All things he writes have been produced by God in the highest degree of perfection since they have necessarily followed from the existence of a most perfect nature Aquinas on the other hand denies that this is the best of all possible worlds Given the things which actually exist he says the universe cannot be better for the order which God has established in things and in which the good of the universe consists most befits things Yet God could make other things or add something to the present creation and then there would be another and a better universe

OTHER SPECULATIONS CONCERNING the cosmos seem to divide into three sorts according as they consider the matter and space the size and shape of the universe or they try to discover the principle by which all things are ordered to ether in one world or they examine what ever order is found and judge its perfection its goodness and its beauty

The first of these three types of cosmological theory belongs primarily to the physicist and the astronomer From Aristotle to Einstein observation mathematical calculation and imaginative hypotheses have propounded the alternatives of a finite or infinite universe or as Einstein prefers to put it of a finite yet unbounded universe as opposed to one which is either simply finite or both infinite and unbounded

Archimedes in the *Sand Reckoner* undertakes to show that the number of the grains of sand in a universe whose outer sphere extends to the distance of the fixed stars is however large a finite rather than an infinite number Lucretius and Newton as we have seen embrace the opposite hypothesis while Aristotle defends the proposition that the universe is finite bounded and spherical in shape Among the great astronomers Copernicus and Kepler no less than Ptolemy conceive the world as bounded by an outer sphere Copernicus opens his treatise by remarking that the world is like a globe whether because this form is the most perfect of all or because it is the figure having the greatest volume or because the separate parts of the world *i e* the sun moon and stars are seen under such a form or because all things seek to be delimited by such a form as is apparent in the case of drops of water and other liquid bodies when they become delimited through themselves

A spherical or (if matter is not distributed uniformly) an elliptical or quasi-spherical universe will be necessarily finite according to Einstein but it will also have no bounds Among the conceivable closed spaces without limits Einstein points out that the spherical space (and the elliptical) excels in its simplicity since all points on it are equivalent But whether the universe in which we live is infinite or whether it is finite in the manner of the spherical universe he thinks is a question that our experience is far from being sufficient to enable us to answer Recent astronomical observations of the velocity of the receding nebulae have suggested the hypothesis of an infinitely expanding universe

These cosmological theories are more fully discussed in the chapter on SPACE Another point of physical speculation concerning the uniformity of the world s matter—not the uniformity of its distribution but the sameness or difference in kind of terrestrial matter and the matter of the heavenly bodies—is considered in the chapters on ASTRONOMY and MATTER We turn therefore to the question of the world s structure apart from its size its shape and the disposition of its matter

THREE METAPHORS SEEM to express the great traditional images of the world s structure The world is a living organism *It is like an animal* with a soul even a soul endowed with reason The world is a multitude of diverse and unequal individual things forming a hierarchy and associated according to their natures and functions for the common good of the whole *It is like a society* a society under divine law and government The world is a system of interdependent moving parts linked together from the least to the greatest in an unbroken chain of causation *It is like a machine*

The first of these world views is proposed by Plato It is not the earliest of the three perhaps if the atomistic cosmology of Democritus which Lucretius later expounds can be interpreted as adopting the mechanical analogy F

mechanism may however be thought to await 17th century developments in the science of mechanics when for Descartes Newton and others the laws of mechanics become the only laws of nature The conception of the world as a divinely instituted and governed society seems to be a product of Jewish and Christian faith Though that expression of it which includes a hierarchical ordering of all things from the elemental bodies to the angels belongs to Christian theologians and poets there may be a pre Christian version in the Stoic theory of the world as governed by a divine intelligence

According to Plato in the *Timaeus* God desired all things to be good and nothing bad and he found that no unintelligent creature taken as a whole was fairer than the intelligent taken as a whole and that intelligence could not be present in anything which was devoid of soul For which reason Timaeus explains when he was framing the universe he put intelligence in soul and soul in body Wherefore using the language of probability we may say that the world became a living creature truly endowed with soul and intelligence by the providence of God Since his intention was that the animal should be as far as possible a perfect whole and of perfect parts he gave it self sufficiency a spherical body—which figure comprehends within itself all other figures —and circular movement The universe did not require therefore sense organs or hands or feet

Such was the whole plan of the eternal God about the god that was to be to whom for this reason he gave a body smooth and even having a surface in every direction equidistant from the center And in the center according to Timaeus he put the soul which he diffused throughout the body making it also to be the exterior environment of it and he made the universe a circle moving in a circle Having these purposes in view he created the world a blessed god

The theory of a world soul and of an animated organic universe appears not only in the *Timaeus* but also in other Platonic dialogues In the *Phaedrus* for example Socrates says that the soul in her totality has the care of inanimate being everywhere and in the *Laws* the Athenian Stranger asking whether it is the soul which controls heaven and earth and the whole world replies that the best soul takes care of the world and guides it along the good path

In somewhat different form the theory of a world soul appears in Plotinus according to whom the cosmic soul belongs only to the material universe and is therefore third and lowest in the scale of the authentic existents. It appears in Gilbert and Kepler though in the latter largely as the expansion of a metaphor It is considered by William James whose comment on the materialistic or so called scientific conceptions of the universe is that they leave the emotional and active interests cold whereas he thinks the perfect object of belief would be a God or Soul of the World represented both optimistically and moralistically All science and all history would thus be accounted for in the deepest and simplest fashion

Precisely because exponents of the doctrine attribute divinity to the world soul Augustine and Aquinas object to it Impious and irreligious consequences follow in Augustine s opinion from the notion that *God is the soul of the world and the world is as a body to Him* To those who compare the microcosm with the macrocosm by saying that the soul is in the body as God is in the world Aquinas replies that the comparison holds in a certain respect namely because as God moves the world so the soul moves the body But it does not hold in every respect for the soul did not create the body out of nothing as God created the world

Furthermore according to Aquinas God is not a part of it but far above the whole universe possessing within Himself the entire perfection of the universe in a more eminent way God in relation to the world should not be conceived by analogy with soul and body but by comparison to a king who is said to be in the whole kingdom by his power although he is not everywhere present This analogy fits better with the conception of the universe as a society under divine government

Although Aurelius reminds himself to regard the universe as one living being having one substance and one soul he also takes the view that the world is a community of things ordered to one another The intelligence of

the universe is social he writes Accordingly it has made the inferior things for the sake of the superior and it has fitted the superior to one another It has subordinated co-ordinated and assigned to everything its proper portion This view of the universe as a community is the one most fully developed in Christian thought Augustine and Aquinas go much further than Aurelius in depicting the hierarchy of things and their ordination to one another under the eternal law Both take as a basic text from Scripture the statement that God has ordered all things in measure and number and weight According to its dignity or worth each thing occupies a place and plays its part in the general scheme of things

The parts of the universe are ordered to each other Aquinas writes according as one acts on another and according as one is the end and exemplar of the other The government of the universe by the divine reason produces a perfection of order in the whole which is the intrinsic common good of the universe and directs each thing to the attainment of its end in which consists its own perfection It belongs to the divine goodness Aquinas says as it brought things into being to lead them to their end And thus is to govern But neither the perfection of each thing nor the order of the universe itself is the ultimate end of divine government Some good outside the whole universe he says is the end of the government of the universe —for the end of all things as their beginning lies in the goodness of God

THE CONCEPTION OF THE WORLD as divinely governed and cared for by divine providence excludes chance as a factor in the formation of the world or in its structure With Democritus and Epicurus in mind Aquinas points out that certain ancient philosophers denied the government of the world saying that all things happened by chance But the rejection of chance does not seem to be peculiar to Christian faith or theology

Plato and Plotinus also deny that the order in the universe can be the result of chance For Plato it is not merely that the world is animated by a rational soul but also as the Athenian Stranger suggests in the *Laws* that it is a work of art rather than of nature or chance

Atoms or elements —it is in either case an absurdity an impossibility writes Plotinus to hand over the universe and its contents to material entities and out of the disorderly swirl thus occasioned to call order into being According to him there is nothing undesigned nothing of chance in all the process Aristotle too speaks against the atomists who ascribe this heavenly sphere and all the worlds to spontaneity or chance When one man he writes referring to Anaxagoras said that reason was present—as in animals so throughout nature—as the cause of order and of all arrangement he seemed like a sober man in contrast with the random talk of his predecessors

It might be supposed that those who view the world through the eyes of Newton or Descartes (when they say as Fielding does the world may indeed be considered as a vast machine) would be inclined to favor chance rather than reason or design But this does not seem to be the case at least not for Newton or Descartes This most beautiful system of the sun planets and comets Newton declares could only proceed from the counsel and dominion of an intelligent and powerful Being

Descartes asks us to consider what would happen if God were now to create a new world somewhere in an imaginary space Suppose that He agitated its matter in various ways so that there resulted a chaos as confused as the poets ever feigned and concluded His work by merely lending His concurrence to Nature in the usual way leaving her to act in accordance with the laws which He had established Something like this orderly universe would be the result The laws of matter in motion Descartes thinks are of such a nature that even if God had created other worlds He could not have created any in which these laws would fail to be observed

In the tradition of the great books only the ancient atomists seem to take the position that the universe is a thing of chance But this does not mean that except for the atomists agreement prevails concerning the manifestation of purpose or design in the world s structure Is the Kosmos an expression of intelligence rational in its inward nature or James asks a brute external fact pure and simple? James finds two answers to this question which

calls the deepest of all philosophic problems —one which regards the world as a realm of final purposes that exists for the sake of something and one which sees the present only as so much mere mechanical sprouting from the past occurring with no reference to the future

As the chapter on MECHANICS indicates Newton and Descartes are in a sense mechanists yet they also affirm final causes—ends or purposes—in the plan of the universe Newton speaks of God s most wise and excellent contrivance of things and final causes It is true that Descartes while referring to the universe as a work of divine art says that God s purpose may not be visible to us in all its arrangements Therefore the species of cause termed final finds no useful employment in physical (or natural) things for it does not appear to me he explains that I can without temerity seek to investigate the (inscrutable) ends of God But this states a rule of method in natural science not the denial of a cosmic plan

That denial is to be found however most plainly in Spinoza It is commonly supposed he writes that all things in nature like men work to some end and indeed it is thought to be certain that God Himself directs all things to some sure end for it is said that God has made all things for man and man that he may worship God Against this view which he regards as the most besetting of all human prejudices Spinoza holds that nature does nothing for the sake of an end for that eternal and infinite Being whom we call God or Nature acts by the same necessity by which He exists Since He exists for no end He acts for no end and since He has no principle or end of existence He has no principle or end of action A final cause as it is called Spinoza continues is nothing therefore but human desire in so far as this is considered as the principle or primary cause of anything

Because man discovers things in nature which serve as means to his own ends man is led to infer Spinoza declares that some ruler or rulers of nature exist endowed with human liberty who have taken care of all things for him and have made all things for his use and hence he affirmed that the gods direct every thing for his advantage in order that he may be bound to them and hold them in the highest honor Thus has this prejudice been turned into a superstition and has driven deep roots into the mind—a prejudice which was the reason why everyone has so eagerly tried to discover and explain the final causes of things. The attempt however to show that nature does nothing in vain (that is to say nothing which is not profitable to man) seems, in Spinoza s opinion to end in showing that nature the gods and man are alike mad

WHERE SPINOZA DENIES purpose or plan in the universe because everything exists or happens from the necessity of efficient not final causes (and ultimately from the necessity of nature or God himself) Lucretius argues against design or providence from the imperfection of the world To those who suppose that the gods designed all things for the sake of men Lucretius says Even if I did not know what first beginnings are yet this judging from the very arrangements of heaven I would venture to affirm and led by many other circumstances to maintain, that the nature of the world has by no means been made for us by divine power so great are the defects with which it stands encumbered

Spinoza would dismiss this argument He thinks he can easily answer those who ask, How is it that so many imperfections have arisen in nature—corruption for instance of things till they stink deformity exciting disgust confusion evil crime etc ? He holds that the perfection of things is to be judged by their nature and power alone nor are they more or less perfect because they delight or offend the human senses or because they are beneficial or prejudicial to human nature"

Others deal differently with the apparent imperfections in the world Descartes, for example makes the point that the same thing which might possibly seem very imperfect if regarded by itself is found to be very perfect if regarded as part of the whole universe Marcus Aurelius goes further Nothing is injurious to the part he writes if it is for the advantage of the whole By remembering then that I am part of such a whole I shall be content with everything that happens

In terms of another principle Berkeley asks

us to consider that the very blemishes and defects of nature are not without their use in that they make an agreeable sort of variety and augment the beauty of the rest of creation as shades in a picture serve to set off the brighter and more enli htened parts As for the mixture of pain or uneasiness which is in the world pursuant to the general laws of nature he thinks that this in the state we are in at present is indispensably necessary to our well being

In the opinion of those philosophers who after an exact scrutiny of all the phenomena of nature conclude that the *whole* considered as one system is in every period of its existence ordered with perfect benevolence Hume sees only a specious if also sublime consolation for all human ills But he does not think such convictions ever really work in practice These enlarged views may for a moment he says please the imagination of a speculative man who is placed in ease and security but neither can they dwell with constancy on his mind even though undisturbed by the emotions of pain or passion much less can they maintain their ground when attacked by such powerful antagonists

But according to theologians like Augustine and Aquinas evil does not and cannot exist in the world except as a privation or corruption of some good Evil neither belongs to the perfection of the universe nor comes under the order of the universe writes Aquinas except accidentally that i by reason of some good joined to it But how does evil enter into a world created by a supremely good deity? What God chiefly intends in created things Aquinas answers is the good of the order of the universe Now the order of the universe requires that there hould be some things that can and sometimes do fail And thus God by causing in things the good order of the universe consequently and as it were by accident causes the corruptions of things Furthermore the order of justice belongs to the order of the universe and this requires that penalty should be dealt out to sinners And so God is the author of the evil which is penalty but not of the evil which is *fault*

ON THIS POINT OF THE PERFECTION of the universe the great conversat on passes from the order of the world to the problem of evil and to related issues When Freud for example in commenting on what he calls the religious Weltanschauung says that earthquakes floods and fires do not differentiate between the good and devout man and the sinner and unbeliever he raises questions which are considered in the chapters on JUSTICE PUNISHMENT and GOOD AND EVIL The perfection of the universe also leads to a discussion of the beauty of its order The praises which are differently voiced by the astronomers the theologians and the poets extol not the visible beauties of nature but the intelligible beauty of the cosmic structure—perceptible to a Kepler in his mathematical and musical formulation of the harmonies of the world

In addition to questions of its goodness and beauty the problem of the world's order is sometimes stated in terms of its rationality For some writers such as Hegel rationality is affirmed as the very foundation of existence *What is rat onal is actual and what is actual is rational* he writes On this conviction the plain man like the philosopher takes his stand and from it philosophy starts in its study of the universe of mind as well as the universe of nature To others like William James the whole war of the philosophies is over that point of faith Some say that they can see their way already to the rationality others that it is hopeless in any other but the mechanical way To some the very fact that there is a world at all seems irrational

Against the Hegelian notion of the world as a perfectly ordered whole (to which James applies the epithet block universe) James proposes the conception of a concatenated universe The real world as it is *given at this moment* James declares is the sum total of all its beings and events now But can we *think* of such a sum? Can we realize for an instant what a cross section of all existence at a *definite* point in time would be? While I talk and the flies buzz a sea gull catches a fish at the mouth of the Amazon a tree falls in the Adirondack wilderness a man sneezes in Germany a horse dies in Tartary and twins are born in France

What does that mean? James asks Does the contemporaneity of these events with each

other and with a million more as disjointed as they form a rational bond between them and unite them into anything that means for us a world? It would certainly not mean a universe or cosmos for those who like Hegel insist upon the pervasive unity of the universe as a whole which completely and rationally relates all its parts But for James who conceives the universe in a pluralistic rather than in a monistic fashion the collateral contemporaneity of all things and nothing else is the *real* order of the world

ALL OF THESE ISSUES carry the discussion back to what is perhaps the decisive question—the question of the world s origin According as men believe it to be the purposeful work of a beneficent intelligence or the product of blind chance or of equally blind necessity their other judgments about the world tend in the general directions of optimism or pessimism Yet this is only true for the most part

The problem of the world s origin involves some technical issues which do not seem to have such consequences for man s appraisal of the universe One is the question whether a created world has a beginning in time or is co-eternal with its creator As is indicated in the chapters on ETERNITY and TIME whichever way the disputed question concerning the eternity of the world is answered its creation may be affirmed or denied Those who think the world is created declare that the power needed to maintain the world in being is identical with the creative power needed to initiate it The divine conservation as Berkeley points out is conceived a a continual creation

The most difficult point in issue concerns the meaning of creation itself According to Christian doctrine the essence of creation consists in making something out of nothing On this principle Aquinas for example contrasts creation with generation or procreation and with artistic production In biological generation the offspring is produced out of the substance of its progenitors In artistic production some pre-existent material is transformed by the craftsman But according to the theologian creation is not change for change means that the same thing should be different now from what it was previously

In becoming or alteration some being is presupposed Creation is more perfect and more excellent than generation and alteration Aquinas says because the term *whereto* is the whole substance of the thing whereas what is understood as the term *wherefrom* is absolutely non being which as he remarks is the same as *nothing* Since the distance between total non being and being is infinite only an infinite power can create or make something out of nothing

Lucretius flatly denies this possibility when he asserts as a first principle that nothing can be produced from nothing Not even the gods can violate this principle Nothin he declares is ever gotten out of nothing by divine power To Locke on the other hand the inconceivability of creation constitutes no argument against it Writers like Lucretius must give up their great maxim *Ex nihilo nihil fit*

It is not reasonable to deny the power of an infinite Being because we cannot comprehend its operations We do not deny other effects upon this ground Locke continues because we cannot possibly conceive the manner of their production It is an over valuing ourselves to reduce all to the narrow measure of our capacities and to conclude all things impossible to be done whose manner of doing exceeds our comprehension

But may not the world be related to a supreme cause or principle in some way which does not involve *exnihilation*? The great books present various alternatives Aristotle s prime mover is the unmoved and eternal cause of the world s eternal motion not of its coming into being or its conservation in being Plato s demiurge is a divinity which according to the myth of the world s origin in the *Timaeus* fashions the universe after the model of the eternal ideas, artistically producing their sensible replicas in the matter or space which is called the receptacle

The emanation of the sensible as well as the intelligible world from the transcendent All One in the cosmogony of Plotinus or the production of finite things from the infinite substance of God in Spinoza s theory seem to be more like generation or procreation than like creation in the meaning of the opening chapter of Genesis

Such theories according to theologians like Augustine and Aquinas or philosophers like Berkeley and Locke deny what is meant by creation in the Judaeo-Christian tradition To Berkeley they are all equally forms of atheism Yet it should be remarked that to Spinoza a theory like that of Plato s is also impious for it places something outside of God which is independent of Him to which He looks while He is at work as to a model or at which He aims as if at a certain mark This is indeed nothing else than to subject God to fate the most absu d thing which can be affirmed of Him whom we have shown to be the first and only free cause of the essence of all things as well as of their existence

THE VARIOUS THEORIES OF the world s origin usually extend also to the problem of the world s end Aristotle for example who denies a beginning to the motions of the heavens and all other cycles of natural change affirms them to go on in everlasting perpetuity But it is not merely those who think the world has no beginning or source who attribute endless endurance to it If the world did not have endless duration it would not be for Plato the moving image of eternity And though they conceive the world as somehow a divine emanation or production Plotinus and Spinoza no less than Aristotle hold it to be everlasting if not eternal We hold that the ordered universe in its material mass Plotinus writes has existed for ever and will for ever endure

The proposition that nothing is ever reduced to nothin is for Lucretius as true as the principle that nothing ever comes from nothing H applies these principles however only to the eternal atoms uncreated and indestructible not to the world after world which ari es and perishes as the atoms come together and disperse J st as any compound body which atoms form can be dissolved into its s mple bodies so whole worlds are subject to similar dissolution and will suffer it in the course of long ages Yet thou h world succeeds world in the cea eless activity of the eternal atoms Lucretius contemplates a universe without beginning or end

Since annihilation (or reduction to nothingness) is the opposite of exnihilation (or creation out of nothing) it might be expected that the doctrine which rests on the faith that in the beginning God created Heaven and earth would also foresee an end to all things—a return of the whole created universe to the nothingness from which it came Sacred Scripture does contain the prophecy of a final cataclysm The earth shall reel to and fro like a drunkard and shall be removed like a cottage says Isaiah Reciting the parable of the tares in the field Matthew explain that as the tares are gathered and burned in the fire so shall it be in the end of this world In the Gospel according to Luke Christ foretells His second coming

And there shall be signs in the sun and in the moon and in the stars and upon the earth distress of nations with perplexity the sea and the waves roaring

Men s hearts failin them for fear and for looking after th e things which are com ng on the earth for the powers of heaven shall be shaken

A d then shall they see the Son of man coming in a cloud with g eat po er and great glory

Heaven and earth shall pass away but my word shall not pass away

But there is one other text which exercises a controlling influence on the theologian s interpretation of Scripture In the second Epistle of Peter we find

th day of the Lord will com as a thief in the night in the which the hea ens shall pass away w th a great noise and the elem nts shall melt with fer ent heat the ea th also and the wo ks that are therein sh ll b burned up

Neve th less we according to his prom se look for new heavens nd a new earth whe ein dwelleth righteousn ss

The final conflagration will be the end of the world as we know it but it will bring about the re formation not the annihilation of the material universe As God has the power to creat so according to Aquinas He has the power to annihilate but since the power and goodness of God are rather manifested by the conservation of things in being we must conclude by denying absolutely that anything at all will be annihilated In the concluding treatises of the *Summa Theolog ca*—dealing with the end of the world the Last Judgment and the resurrection of the body—the final cataclysm is described as the cleansing of the world by fire to bring *into being* a new earth and a new heaven

In our time men talk of the end of the world as an event which might by chance occur

chain reaction set up by atomic fission got out of control and exploded the whole material universe The physicist s theory of entropy also forecasts the eventual dissipation of energy to the point at which the universe will be a frozen mass of inert matter These are secular alternatives to the religious prophecy of the world s end But what Jesus said of the Last Judgment —that its time is a secret hidden from men—may be applicable to any termination of the world certainly if it lies in the hands of God, and not merely at the disposal of man or nature.

OUTLINE OF TOPICS

REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to For example in 4 Ho ER *Iliad* BK II [265 83] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 12

PAGE S CTIONS When the text is printed in one column the letters a and b refer to the upper and lo er hal es of the page For example in 53 JAMES *Psychology* 116a 119b the pas sa e be ins in the upper half of page 116 and ends in the lo er half of page 119 When the te t is pri ted in two columns the letters a and b refer to the upper and lower hal es of the left hand side of the page the lette s c and d to the upper and lower halves of the right hand side f th p ge For example in 7 PLATO *Sympos m* 163b 164c the passage beg ns in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164

AUTHOR S D ISIONS One or more of the ma n divisions of a work (such as PART BK CH S CT) are sometimes included in the reference line numbers in brackets are g ven in certain cases *e g Iliad* BK II [265-283] 12d

APPENDICES

Appendix I

BIBLIOGRAPHY OF ADDITIONAL READINGS

The Bibliography of Additional Readings provides information concerning the authors and works cited in the Additional Readings. In addition to the full name and dates of each author, the Bibliography gives as much of the following information as is appropriate to each work cited: the full title (and subtitle, if any); the name of the editor or translator, if these are identified in the recommended edition; the place of publication of the edition or translation recommended; the name of the publisher and the date of publication; the original title, the date and, in some cases, the place of composition or publication.

Since the Additional Readings are two separate lists of authors and works, and the Bibliography is a single compilation of the titles which comprise these two lists, each was constructed according to different principles. The following statement of these principles serves to guide the reader in using the Bibliography in relation to the Additional Readings.

AUTHORS' NAMES. In the Additional Readings, surnames are used, with initials added only where necessary to distinguish identical surnames; for example, J. H. NEWMAN. In a few exceptional cases, full names are used because this is the most recognizable form; for example, LEONARDO DA VINCI. The common Anglicized spelling is employed for reference to foreign names.

The alphabetical order of authors' names in the Bibliography is determined by the way in which the names appear in the Additional Readings. Initials do not affect the order; for example, J. H. NEWMAN appears in the Bibliography as NEWMAN, JOHN HENRY. When full names are used in the Additional Readings, the first name determines the alphabetical location of the author in the Bibliography; for example, LEONARDO DA VINCI is listed under "L," not under "D" or "V."

TITLES OF WORKS. In the Additional Readings, full titles are generally used. In some cases abbreviated forms are employed to avoid undue length. All subtitles are omitted.

In the Bibliography, both title and subtitle are used, and, with few exceptions, the title is given as it appears on the title page of the edition cited.

Titles are arranged in alphabetical order under the names of their authors. The alphabetization of titles disregards initial English articles (*a*, *an*, and *the*), but not prepositions (*of*, *on*, etc.).

The titles of anonymous works are placed in alphabetical order among the authors' names; for example, *Aucassin and Nicolette* appears in the Bibliography between ATHANASIUS and AUGUSTINE.

The opening words of a shortened title in the Additional Readings sometimes differ from those of the full title. In these cases, the short title precedes the full title in the Bibliography and is placed in brackets; for example, Faraday's *Various Forces of Matter* appears in the Bibliography as [Various Forces of Matter] *A Course of Six Lectures on the Various Forces of Matter and Their Relations to Each Other*.

The full title sometimes includes the names of a number of works of which the Additional Readings cite only one. If the opening words of the full title differ from those of the title in the Additional Readings, the latter is placed in brackets and precedes the full title in the Bibliography; for example, Shaw's *Crude Criminology* appears in the Bibliography as [Crude Criminology] *Doctors' Delusions, Crude Criminology, and Sham Education*. The alphabetization is determined by the bracketed title, since this is the title which appears in the Additional Readings.

TRANSLATION. The manner of citing titles in the Additional Readings indicates whether a foreign work is available in English translation. If no translation exists or is available, the title is given only in the original language. If, however, the work has been translated, the English title is always used, sometimes in conjunction with the original title. When two

titles are thus given which appears first depends in large part on the wording of the title page or the backbone of the volume which contains the translation

Some translations carry the original title in the primary place and use the translation as a secondary title Some translations use only the English title In these cases where the work is well known under its original title this is added in parentheses after the English title. *Some translations use only the foreign title In these cases an English version is added in* parentheses after the original title

In the Bibliography the titles of translated works are listed alphabetically according to the way in which they are cited in the Additional Readings If the original title is given first in the Additional Readings then only it is used in the Bibliography If the English title is given first in the Additional Readings or if only it is used then the work is listed alphabetically in the Bibliography according to the English title *In these cases the English title is always* accompanied by the original title in parentheses

Collections In the Additional Readings the titles of essays or papers which are parts of a published collection are sometimes given within quotation marks followed by the title of the collection the latter appearing in italics for example J H Newman Private Judgment in vol ii *Essays and Sketches* or McIlwain The Fundamental Law Behind the Constitution in *The Constitution Reconsidered* In these cases it is the italicized title of the collection in which the essay or paper is published rather than the quoted title of the essay or paper which is listed in the Bibliography for example the essay by McIlwain in the example above is represented in the Bibliography by the following entry under McIlwain Charles Howard *The Constitution Reconsidered*

The title of an individual essay or paper or of a single lyric poem is sometimes cited in the Additional Readings without reference to the collection in which it is published In these cases the title is italicized not quoted The individual work is represented in the Bibliography by this title and the bibliographical information includes the title of the collection in which it is published

A work listed in the Additional Readings may be available only in a collection or set of volumes with a single collective title The collective title and the number of the volume in which the cited work appears are included in the bibliographical information for example what is cited in the Additional Readings as Augustine *On the Trinity* is represented in the Bibliography by the following entry under Augustine Aurelius Saint Bishop of Hippo *On the Trinity* In Vol ii *Select Library* *Select Library* is a shortened form of the collective title of a set of volumes i e *A Select Library of the Nicene and Post Nicene Fathers of the Christian Church* Ed by P Schaff First Series 8 vols

When the full title of a collection and bibliographical information about it is given as part of the entry for a particular title subsequent listings of other parts of the same collection may refer back to the collective title by using *ibid* or *q v* or see above In other cases, only a shortened form of the collective title is given in the entry itself Here the collective title in full accompanied by bibliographical information is given in a note appended to the last entry for that author

Whole and Part Citations In all cases in which parts of a work are recommended in the Additional Readings the citation indicates these parts in a number of ways It usually gives author's editor's or translator's divisions of the work such as book part chapter section etc In the few cases where such divisions are not citable it gives page references to a particular edition When page numbers are given it is of course necessary to use this edition to find the pages cited

When author's or editor's divisions are used they are usually applicable to all standard editions of the work especially if it was originally written in English In the case of translation it sometimes happens that the translator has made his own divisions of the work Where this is so the divisions indicated must be found in the particular translation specified in the Bibliography The author's or translator's divisions are given in the same manner as similar divisions are given in the Reference sections of the 102 chapters i e BK P T CH SECT etc followed by the number of the division in Arabic or Roman numerals according to the usage of the work cited

Sometimes letters or numbers without part names signify subordinate divisions of the author's work for example Hegel *The Phenomenology of Mind* iv b (3) These are given precisely as they appear in the works themselves

In a few cases, the recommended part of an author's work is titled Such titles are placed in parentheses after the title of the work itself for example Péguy *Basic Verities* (Freedom)

Chronological Order. In the Additional Readings the titles are listed in a chronological order, or, more precisely, they are divided into two groups, each in chronological order. The first of these consists of works written by the authors represented in *Great Books of the Western World* but not published in this set; the second consists of works by other authors.

The order is determined in the same way in both groups—by the date of an author's work, not by his birth or death date. For each title listed in the Additional Readings, the determining or order date is given in the Bibliography.

For all contemporary works and works written in English which appear in only one edition, the date which follows the place of publication and the name of the publisher is the order date.

For all translations the order date is the date of the original writing or publication. This is given in parentheses along with information about the original title and its place of writing or publication.

Similarly, for works which have been recently republished or which exist in several editions, the order date is the date of the original publication or perhaps the date of composition. This date is given in parentheses. If it is the date of composition, it is so given by itself. If it is the date of a first edition or an original publication of the work, it is given with other bibliographical information.

When parts of collections—poems, essays, plays—are individually cited, the order is determined by the date in parentheses of the individual work, not by the publication date of the collection.

When the entry for a particular title in the Bibliography includes two dates, the order date is always the one in the parentheses at the end of the entry.

A question mark in conjunction with a date signifies that it cannot be determined with certainty; the letter *c* (for *circa* or "about") signifies that the date is regarded as an approximation.

In a great many cases more than one work is cited for a particular author, and often the publication date, or even the date of composition, is difficult to ascertain. This is especially true of works written in antiquity. Hence the chronological principle had to be applied with the following qualifications:

1. When two or more works by the same author are cited, they are grouped together under his name in strict chronological sequence. The chronological position of such a group of titles is determined by the date of the most recent title in the group. Hence, the whole series of individual titles in a list of Additional Readings may not be in strict chronological sequence.

2. If the work was published in the author's lifetime, the date used (if available) was that of its first publication. In the case of posthumously published works, the date of composition was used.

3. In the case of works for which no publication or composition date was available, the date of the author's death was usually substituted or, as indicating the period in which he flourished, the median date of the author's life.

4. In the case of lectures later compiled and published as books, the date the lectures were first delivered was used.

5. In the case of a work published in several volumes over a period of years, the publication date of the first volume was used.

6. In the case of collections of papers or essays published during the author's lifetime and within a short time of the first scattered publication of the individual papers or essays, the date used was the publication date of the collection. But when the collection was published posthumously or a long time elapsed between the first scattered publication and the publication of the collection, the median date of original publication dates was used. Whenever one set of dates could not be definitely determined, the other was used.

7. If a collection published posthumously represented the bulk of an author's writing, a date in the middle of his productive period was chosen.

8. When a single essay from a collection was cited, the date of the original publication of that essay was used, not the publication date of the collection.

9 In the case of single plays the date used was that of original publication or first performance whichever could be more definitely ascertained If both were equally ascertainable the earlier was used

10 The publication date of a single lyric poem was used if it appeared separately before its appearance in a collection Otherwise the date of the collection was used

Because the foregoing factors affected the application of the chronological principle the authors are frequently not listed in strict chronological order in the Additional Readings. However the precise chronological position of each author can be determined by his life dates which appear in the Bibliography A question mark in conjunction with these dates signifies that they cannot be determined with certainty the letter *c* signifies that a date is regarded as an approximation and *fl* (for *floruit*) indicates that a date given is the period when the author flourished

APPENDIX II

THE PRINCIPLES AND METHODS OF SYNTOPICAL CONSTRUCTION

THE FOLLOWING ESSAY is intended as a supplement to the Preface The Preface is the editor s statement of the nature structure purpose and uses of the Syntopicon But as therein remarked it does not treat the intellectual and editorial problems which were faced in constructing the Syntopicon nor does it explain the principles and methods by which they were solved

Any sustained use of the Syntopicon will undoubtedly raise questions about these principles and methods Such questions may arise from a purely speculative interest or they may be prompted by a desire for more detailed guidance in the use of the Syntopicon—the ways in which it can be used the procedures to facilitate its use and the limitations to which its use is subject This essay attempts to anticipate and to give systematic answers to such questions

Since different problems were faced and different principles followed in the several parts of the work this essay is divided into the following sections

I THE GREAT IDEAS AND THE INVENTORY OF TERMS

THE GREAT IDEAS LIKE THE GREAT BOOKS represent a selection In both cases the criteria controlling the selection can be explained In neither case do the purpose and rationale of the choice preclude the possibility of disagreement even when due consideration is given to these criteria

No list of the great works of western civilization can expect unanimous and unqualified acceptance by persons learned enough to judge There may be disagreement concerning what constitutes a great book or concerning the principles which give form to the collection as a whole But even when such disagreement is absent there are likely to be differences with regard to the inclusion or exclusion of particular authors and titles

Under the circumstances the most that can be hoped for is that these differences concern no more than a small fraction of the whole No greater measure of

acceptance need be sought for a list of great books than assent to a very large proportion of its contents by those who understand the purpose and criteria governing the selection The editors believe that the 74 authors and the 443 works[1] included in *Great Books of the Western World* form a collection which meets this test

The same test applies to the list of great ideas which are the titles of the 10 chapters of the Syntopicon The editors have reason to believe that the number of exceptions which might be taken to this list by way of addition or subtraction would be inconsiderable as compared with the total But as with the great books so with the great ideas the application of this test presupposes some understanding of the criteria of their selection

The purpose and principles underlying the compilation of *Great Books of the Western World* are stated and illustrated in the introductory essays that comprise Volume 1 of this set Here we shall undertake to explain the compilation of *The Great Ideas* The two explanations are mutually supporting

Both the great books and the great ideas were chosen to represent the unity and continuity of the tradition of western thought The great books are those which deal imaginatively or intellectually with the ideas which are fundamental throughout this whole tradition Any important work—ancient mediaeval or modern—will necessarily be concerned with these ideas in some way What distinguishes the great books is the originality the profundity and the scope of their treatment of these ideas Other books important in some special field of learning may have these qualities with respect to one idea or even to several related ideas but the great books possess them for a considerable range of ideas covering a variety of subject matters or disciplines and among the great books the greatest are those with the greatest range of imaginative or intellectual content

It seems fitting that the ideas which are the central insights and the richest concepts of western thought should be used as the touchstone—or at least as one of the principal criteria—for selecting the great books In the deliberations leading to the selection of *Great Books of the Western World* the Board of Editors applied this test to particular authors and works The reader can apply it for himself by comparing the 443 works which are published in this set with the 2600 or more important books listed in the Bibliography of Additional Readings

It is no less fitting that the books which are creations of the highest literary art and expressions of the most powerful thought in our tradition should be used to

[1] In the T bl of Autl T tl d A th D is C ted wh h con lud th Expla tion of R f ce Styl th mb f tho ames l ted 7 H m l n M d so d J y th th rs of *Th F der l* e list d b k t be se th r mes d n t ctually ppe in th R f c ces. determine which are the great ideas in that tradition The work of constructing *The Great Ideas* began with a list much longer than the 102 chapter titles of the Syntopicon in its final form During the first two years of preliminary work the editorial staff operated with this list of possible terms progressively reducing the number to the 102 which were finally selected

The great majority of terms eliminated were those which did not appear to receive extensive or elaborate treatment in the great books They were term that did not seem to have a lively career—a continuous and complex development throughout the three thousand year tradition of the great books The editors used the actual content of the great books as the test whereby to separate a small set of truly great ideas from a much larger number of important concepts or notions The reader can apply this test himself by comparing the 1800 concepts listed in the Inventory of Terms with the 102 ideas that are treated as the principal terms in the Syntopicon

It seems circular to say that the great books are those which deal most fully and significantly with the great ideas and that the great ideas are those dealt with most fully and significantly in the great books Circularity in definition is not however always a grievous fault We recognize for example the good sense of saying that among works of art the best are those preferred by persons of the best taste and greatest critical competence yet we also find it necessary to say that among the critics of an art the best and most competent are those who like the best works best That each is used to measure the other does not invalidate the measure for anyone who perceives that the same principle—the principle of artistic excellence—is operative though differently in both measurements So too the same principle—that of cultural significance in the tradition of western thought—determines which are the great books and which the great ideas When this is understood the use of each to measure the other will seem justified

The editors were keenly aware of this problem during the period in which the two lists—of the great books and the great ideas—were being shaped and given final form each by reference to the other But the record of their deliberations will also show that the circularity was far from complete That it deals in an important way with the great ideas of western thought *is not the only criterion of a great book* That it receives significant treatment in the great books of the western tradition *is not the only criterion of a great idea* Other criteria were present in the construction of both lists Yet even these may not be altogether independent For example the recognition that the great books are not merely monuments of our literary and cultural past but also books of contemporary eminence parallels the recognition that the great ideas are not merely the vehicles of traditional thought but also the notions which men must use today in thinking about contemporary realities The fundamental fact which somehow emerges is that the greatness of the books and the greatness of the ideas derive from the same source

THE CORRELATION BETWEEN THE GREAT IDEAS and the great books is thus an answer to the question Why were these 102 terms chosen as the basic divisions of

the Syntopicon? If the books had been radically different the ideas would have been different also If for example *world culture* were now an historic reality and if a set of books were chosen to represent the unity and continuity of a *world tradition* the list of great ideas would probably differ in a number of striking respects But it is the western world not the whole world of which these are the great books and the great ideas

It is the western tradition *as a whole* that the great books *as a set* represent But each one of the great ideas not the total collection of them stands in relation to the whole tradition represented by the set One indication of the greatness of these ideas is that each of them pervades the entire tradition If for example the set of great books had been restricted in any way—to represent the culture of antiquity exclusively or only modern thought or to represent what is sometimes called the scientific tradition as opposed to the tradition of humane letters —then a somewhat different set of terms would have had to be chosen as the great ideas of that partial or sectarian tradition

Not all of the great ideas are equally extensive in range Not all have equal vitality in all the epochs of western civilization or equal significance for all its intellectual phases In this sense they are not all equally great

Ideas like KNOWLEDGE MAN GOD have the maximum range pervading all the major periods and also all the divisions of learning or kinds of literature Ideas like JUSTICE LIBERTY STATE and WEALTH on the one hand or like MATTER SPACE TIME and WORLD on the other have universality insofar as they are basic concepts in all periods of the western tradition They are discussed from one end of the great conversation to the other But they are not discussed in *all* the great books for they are not relevant to every imaginative or intellectual consideration

Still other ideas do not run evenly throughout the entire tradition OLIGARCHY PROPHECY and ANGEL, for example have a more lively incidence in ancient or mediaeval than in modern thought EVOLUTION and PROGRESS are examples of an opposite sort There may be anticipations of these ideas in ancient and mediaeval thought but not until the modern period do they become dominant notes in man s view of nature and history

These exceptions to the universality—in time and interest—of the great ideas testify to the principle followed in selecting the 102 basic terms of the Syntopicon For the most part these terms have the requisite universality The reader can verify this for himself by observing the distribution of authors and books cited in the Reference sections of the various chapters He will find that authors of every period have a voice in the conversation and that almost every sort of book is represented—poetry science history philosophy theology He will also find however that except for the truly ubiquitous ideas one or another branch of learning or literature may predominate and sometimes a whole field of inquiry may be absent Some ideas by the intensity of their significance for one epoch or one department of human thought make up for their limited range or scope To admit these to the company of the great ideas the requirement of universality was relaxed

The varying lengths of the 102 chapters ranging as they do from 11 to 62 pages cannot be taken without some qualification as a measure of the universality of these ideas in the tradition of western thought The length of a chapter does not depend *only* on the volume of the references—the number of authors books and passages *cited it depends also upon the complexity of the idea that is upon the* number of topics required to state all the related meanings problems or issues which have been discussed in the name of that idea But these two factors taken together do account for the size of each chapter The varying chapter length therefore indicates a gradation among the 102 great ideas with respect to their universality or ubiquity in extent and to their interior complexity or manifold significance in intent

IT IS IMPOSSIBLE TO DEFINE ANY MINIMUM degree of range and amplitude which distinguishes the ideas selected for syntopical treatment from the hundreds of other terms that were eliminated in the early stages of the work With regard to the vast majority of those eliminated a clear and certain judgment was possible in the light of criteria already stated There were of course borderline cases in which the decision to include or exclude a term remained doubtful even after prolonged deliberation Such decisions had to be made finally in a somewhat arbitrary fashion in terms of practical criteria not yet stated One of these for example was the necessity for some limitation on the number of chapters In some cases the significance of the dropped term might be adequately covered in the analysis of other terms which more clearly deserved inclusion

The first list of possible terms numbered upward of 700 It might serve some purpose to present a brief sampling of the terms which while among the most likely candidates for inclusion were discarded in the early stages of the work

analysis	generation	persuasion	society
axiom	grammar	population	sovereignty
authority	growth	possibility	spirit
becoming	harmony	poverty	style
belief	heredity	power	substance
character	hero	prediction	superstition
choice	hope	probability	synthesis
conquest	ideal	production	taxation
contemplation	imitation	profit	teaching
creation	inference	property	*temperament*
criticism	instinct	providence	theory
deduction	intuition	purpose	thought
doubt	jurisprudence	reality	tolerance
environment	learning	republic	tradition
equality	marriage	revelation	use
essence	methodology	revenge	utopia
equity	money	*rights*	*value*
fact	nutrition	ruler	volition
faith	obedience	salvation	wages
fallacy	organism	self	woman
force	ownership	sex	worship
friendship	patriotism	skepticism	youth

The penultimate list consisted of 115 terms Thirteen of these were finally dropped analogy biology body community empire genus and species health and disease individual light music order person tragedy From that point on the words or pairs of words chosen to express the great ideas numbered 102

THE TWO MEASURES OF INTRINSIC GREATNESS—scope and significance—do not fully explain all the eliminations from the original list Certain arbitrary factors were operative in the final determination of the 102 chapters of the Syntopicon

In the first place a number of words do not appear as chapter titles simply because they are synonyms of words selected as principal terms For example freedom motion conflict obligation and universe were discarded in favor of their synonyms liberty change opposition duty and world

In the second place certain words were paired either for convenience of treatment or because they are usually discussed together in the great books Sometimes these words represent fundamental opposites good and evil life and death necessity and contingency one and many pleasure and pain same and other universal and particular virtue and vice war and peace and sometimes they represent closely associated terms custom and convention memory and imagination sign and symbol Opposites were not always made explicit especially if one of the pair was a purely negative term (*e g* justice and injustice prudence and imprudence temperance and intemperance) and this policy affected the decision not to pair cowardice with courage Nor were closely associated terms always indicated in the chapter title For example becoming might have been associated with change friendship with love society with state or despotism with tyranny just as symbol is associated with sign or convention with custom The decision in each of these cases rested upon considerations germane to the treatment of a particular chapter in itself and in its relation to other chapters

With one exception the decisions made with regard to synonyms and the pairing of words do not affect the number of chapters but only the character and the number of words which appear in the chapter titles That one exception is the pairing of memory and imagination each might conceivably have been the title of a separate chapter Joining them in a single chapter avoided a certain amount of duplication in the topics and references which would have appeared under each

This leads us to a third principle—a principle of convenience—which affected the number of chapters The number might have been made smaller by subordinating certain terms to others among the 102 For example all the forms of government (aristocracy democracy constitution monarchy oligarchy tyranny) might conceivably have been treated as topics or groups of topics in the chapter on GOVERNMENT all the virtues (courage justice prudence temperance wisdom) might have been similarly treated in the chapter on VIRTUE AND VICE But convenience dictated a separate treatment of each of these notions in order to avoid the excessive complexity and unwieldy length which would have re-

sulted from the number of topics and the volume of the references these chapters would have had to contain

The number of chapters might also have been expanded as for example by dividing MEMORY AND IMAGINATION into two chapters or by breaking a large and complex chapter into a number of smaller ones This might have been done in the case of BEING by substituting chapters on existence essence substance reality The reason which operated against such multiplication of chapters was (as already stated) the desire to avoid excessive duplication among topics and references

To the extent that such pragmatic criteria or reasons of convenience were operative the number 102 and the list of terms chosen as chapter titles are somewhat arbitrary But this unavoidable arbitrariness does not affect the character of the terms selected as the great ideas of the western tradition Their character would have been the same had the number been 92 or 112 It would have been the same had other words been used to express the same meaning—if for example freedom had been used instead of liberty or universe instead of world What is not arbitrary in short is the distinction between the character of the terms selected and the character of those eliminated because they do not function as major centers or pivots of discussion in the great books

ALL THE ELIMINATED TERMS and many more appear in the Inventory of Terms The Inventory has 1798 entries whereas the original list of possible terms numbered less than 1000 In analyzing the basic concepts it was discovered that terms not thought of as candidates for primary treatment had significance as subordinate concepts

The composition of the Inventory of Terms tends to throw light on the character of the great ideas and to confirm the distinction between primary and subordinate concepts But it must first be observed that not all of the words that appear in the Inventory of Terms express subordinate concepts Some as we have already seen are synonyms for the words chosen to express the great ideas and some are words which if not strictly synonyms have a significance coordinate with that of the great ideas Some have even more generic meaning than the chapter words and some are chapter titles

The concept of a republic or of republican government is for example coordinate with the idea of a constitution or of constitutional government but the idea of CONSTITUTION with its correlative notions of constitutional law and the principle of constitutionality better served the purpose of analyzing this whole complex of notions as they appear in the great political and historical books of the western tradition In other cases a word which at first seems coordinate in meaning is found on closer examination to have less generality at least so far as the great books are concerned This is true of becoming as compared with change friendship as compared with love or atom as compared with element In their greater amplitude the chapters on ELEMENT LOVE and CHANGE provide places for adequate treatment of these subordinate concepts

Certain terms which may at first appear coordinate with the 102 great ideas are actually more rather than less general in their significance "Society" and "thought" for example express concepts which require a number of chapters in part or whole for their adequate treatment The entry under "thought" in the Inventory of Terms refers the reader to a large number of chapters such as IDEA JUDGMENT LANGUAGE MEMORY AND IMAGINATION MIND REASONING The word "thought" is not only more general but also more indefinite these chapters cover the discussion of thought in the more definite terms in which it occurs in the great books

The situation with respect to "society" is not quite the same The entry under "society" in the Inventory of Terms refers the reader to a number of chapters of which two—FAMILY and STATE—deal with the two main types of society or community (*i e* the domestic and the political) For the most part the great books discuss the family and the state rather than the more generic notion of society or human association as such For the most part they do not discuss primitive societies which are strictly neither families nor states and if they consider other types of association such as economic corporations or religious communities they do so in relation to the family or the state The generic concept of society is treated fully at the generic level only in the comparatively recent literature of sociology and anthropology

It should be clear from these two examples that words expressing concepts more generic than the great ideas are relegated to the Inventory of Terms according to the same principle as that applied to words expressing subordinate concepts In both cases the standard is set by the range and level of the discussion in the great books

With a few exceptions such as "thought" and "society" (which are more generic) or "republic" (which is coordinate) the vast majority of the words listed in the Inventory are subordinate terms Many are words which actually appear in the phrasing of one or more of the topics under the great ideas or they may be synonyms for these words Some are words which are implied by the meaning of one or more topics Such words and their synonyms are listed in the Inventory as well as words verbally present in the topics

AS THE 2987 TOPICS OF THE SYNTOPICON state the themes which are discussed under the great ideas so the words listed in the Inventory represent the terms in which those themes are discussed For both the ultimate point of reference is of course the content of the great books and of the tradition they represent Through the intermediation of the topics the terms of the Inventory reflect the same principles of selection as do the great ideas This accounts for differences between the Inventory of Terms and other basic word lists such as Baldwin s *Dictionary of Philosophy and Psychology* Lalande s *Vocabulaire technique et critique de la philosophie* the general terms contained in the classified listing of articles in the *Encyclopaedia Britannica* and the abstract titles under the classification of articles in the *Encyclopaedia of the Social Sciences* All of these necessarily include technical terms

of highly specialized import in particular fields of inquiry They also tend to reflect predominantly the state of knowledge and opinion in the 19th and 20th centuries—the latest developments of the tradition rather than the whole of it

The Inventory of Terms consists mainly of words in common use It is not the vocabulary of philosophy science or any other special study It is the basic vocabulary of ordinary speech concerning ideas which b long not to the last century or to the present day but to the collective common wisdom of mankind Though most of its words have currency in contemporary English speech they also have currency in the thought of thirty centuries no matter how they were verbally expressed in a variety of languages living and dead

An entry in the Inventory of Terms usually consists of a term followed by an enumeration of the topics in which that term is a significant element There are two exceptions to this procedure which deserve comment

For most of the terms listed the relevant topics are cited in a single group in the alphabetical order of the chapters in which they appear But for a certain number of terms the topics are divided into two groups each arranged alphabetically In these cases topics of immediate relevance are distinguished from those of remote relevance The former state themes or issues in which the term under consideration is central to the discussion the latter those to which it tends to be peripheral

The second exception is the citation of whole chapters in addition to individual topics from other chapters When whole chapters are cited they are placed first in the enumeration because all their topics are of maximum relevance to the term under con ideration The procedure of citing whole chapters was adopted initially in the construction of those entries which are the names of the great idea themselves It was extended to words which are synonyms for the chapter titles and to a small number of other words which express terms of considerable magnitude

The reason for the inclusion of the chapter names and their synonyms in the Inventory of Terms should be immediately apparent Each of the great ideas is involved in the meaning of topics in other chapters The fact that each of the great ideas is implicated in the analysis of many others shows the interconnection of the ideas a point to which we shall return presently It also helps to indicate the difference in magnitude—in topical range—between the great ideas and all subordinate notions

In almost every case the names of the great ideas (or their synonyms) have a greater number of topics cited for them in the Inventory of Terms than do other terms This shows that they are the major terms in the tradition of western thought They are the terms with the most varied and manifold significance and with the greatest incidence in the discussion of important problems It might almost be said that they are the unavoidable terms in the principal areas of discourse That subordinate terms have a much more restricted topical range confirms the difference in discursive amplitude between them and the great ideas

The reader can therefore verify for himself by examining the Inventory of Terms the difference between the great ideas and all other terms He need only

compare the number and variety of topics cited for the great ideas and for all other terms By the same criterion he can also order all the other terms in the Inventory according to the degree to which they approach the great ideas in topical range He would find that the class of terms which by this test most nearly approximated the great ideas is not large—probably much less than one hundred of the 1798 terms in the Inventory These would be the borderline terms—the few whose omission from the company of the great ideas might be disputed

The 102 chapters of the Syntopicon present the great ideas in alphabetical sequence The Inventory of Terms is also alphabetically arranged partly for convenient reference and partly to avoid the formulation of any rigid systematic order among the great ideas and their subordinate terms Many systematic arrangements of these concepts are possible and the adoption of any one of them would be prejudicial to the others The alphabetical arrangement admits all possibilities and conceals all alike On the other hand as we have just seen the Inventory of Terms reveals as well as conceals the relation of the great ideas to one another and of other terms to them But the relationships revealed in the Inventory are not systematic in the sense of giving one idea or set of ideas logical priority over others

The Inventory of Terms merely shows the subordination of one concept to another insofar as the one enters into the topics which express the content of the other But this sort of relationship between two great ideas does not place them in a fixed systematic order for each may be subordinate to the other that is each may be involved in the topics of the other Liberty for example is involved in the topics of Justice and Justice in the topics of Liberty Infinity is involved in the topics of Space Time Matter and World and they in turn are involved in the topics of Infinity

Other types of relation among the great ideas are indicated in the Introductions and the Cross References which are respectively the first and fourth parts of each of the 102 chapters Both of these parts of the Syntopicon are discussed at greater length subsequently in this Appendix Here it is sufficient to point out that the interconnection of the great ideas which the Introductions and the Cross References suggest is an order no more systematic than that indicated by the Inventory of Terms

The Cross References in one chapter call the reader s attention to similar or related topics in other chapters A particular Introduction usually refers the reader to other Introductions for a fuller consideration of certain matters or for the exposition of affiliated points That neither of these types of connection sets up a systematization of the ideas is simply shown by the fact that neither places them in a unique logical order The Introduction and the Cross References merely show that one idea is related to a number of other ideas without specifying the logical character of the connection Without such specification the network of connections set up by the Inventory of Terms the Introductions and the Cross References cannot become a systematic order

A systematic order of concepts belongs properly to the exposition of a doctrine The tradition of western thought contains a variety of doctrines many of them conflicting Of these certainly of the principal ones the great books provide the best and fullest exposition and their conflict appears most sharply whenever the voices in the great conversation engage in explicit controversy *The Great Ideas* as a syntopicon of the great books must therefore avoid so far as that is humanly possible any trace of systematic order In no other way could it present the whole tradition free of prejudicial coloring by any one of its parts In no other way could it embrace every variety of position without the distortion that would necessarily follow from a stronger attachment to one than to others

Detachment is the essence of a purely dialectical treatment of ideas a opposed to the dogmatic exposition of a particular doctrine—dogmatic not in the sense of being without rational foundation or defense but simply in the sense of being attached to some particular order of ideas in preference to all others The explanations which follow concerning the construction of the Outlines of Topics and the manner in which the Introductions were written will offer further evidence of the dialectical detachment that was sought in every phase of this work because it was necessary for carrying out the conception of the Syntopicon That dialectical detachment is preserved by the alphabetical ordering of the great ideas insofar as it alike admits or conceals all possible orderings and it is confirmed by the non systematic character of the various connections among the great ideas as these are indicated by the Inventory of Terms the Cross References and the Introductions

THESE CONNECTIONS THOUGH NOT SYSTEMATIC are neither haphazard nor insignificant They point to various constellations of ideas which are the conceptual patterns of major fields of learning or inquiry

Consider for example the interconnection of the ideas of GOVERNMENT FAMILY STATE LAW CONSTITUTION DUTY JUSTICE LIBERTY MAN CITIZEN SLAVERY PUNISHMENT WAR and REVOLUTION and of these with the ideas of particular forms of government such as ARISTOCRACY DEMOCRACY MONARCHY OLIGARCHY and TYRANNY These ideas have more complex and intimate relations with one another than any of them has with such ideas as ANIMAL CHANCE DEFINITION EVOLUTION MATTER SENSE SOUL or WORLD Their interconnection forms that constellation of concepts which characterizes the field of political thought and distinguishes it from all other field

The interconnection of the ideas of LABOR WEALTH JUSTICE LIBERTY SLAVERY FAMILY STATE REVOLUTION WAR and perhaps DEMOCRACY and OLIGARCHY forms the constellation of concepts which characterizes the field of economic thought To take a more sharply contrasting example the interconnection of the ideas of GOD MAN IMMORTALITY FATE PROPHECY SOUL SIN WORLD RELIGION and THEOLOGY and the relation of these to such ideas as GOOD AND EVIL DUTY HAPPINESS VIRTUE LAW and PUNISHMENT constitute the conceptual pattern of religious thought

In none of the preceding examples is the enumeration of ideas intended to be exhaustive In each case only the principal concepts are mentioned But even if to these were added all the peripheral concepts—those having any appreciable degree of relevance to the subject matter—many of the great ideas would still be omitted from the constellation of concepts involved in a particular subject matter or field of inquiry This indicates that every idea is not associated equally with every other All belong together in the single intellectual firmament of western thought but they also form separate sub groups or constellations which delineate traditional subject matters

Yet one may wonder whether every great idea is not in some way related to every other—if not directly then at least through the mediation of other ideas Some evidence on this point is afforded by the examples given above Politics and economics have common ideational elements The concepts of JUSTICE, LIBERTY SLAVERY FAMILY STATE REVOLUTION WAR DEMOCRACY and OLIGARCHY are involved in both fields of thought Politics and religion also have common ideational elements (*vi* MAN DUTY LAW PUNISHMENT) By this measure they would seem to overlap less than do politics and economics But whether they overlap more or less it is through the relation of the various fields of inquiry to one another that each of the 102 great ideas has some degree of relevance to all the others

At different times in the tradition of western thought the major fields of inquiry or subject matter have been differently conceived and either more broadly or more narrowly defined According to different doctrines the relation of the fields to one another—the order of the sciences the general groundplan of learning—is differently construed Hence it would be prejudicial and presumptuous to advance here a definitive formulation of concepts central and peripheral which separate or relate the traditional fields of inquiry such as politics ethics or morality economics religion and theology metaphysics physics biology or the philosophy of nature psychology anthropology or the philosophy of man epistemology or the theory of knowledge history and the philosophy of history the liberal arts of grammar rhetoric and logic poetry and the philosophy of art

By using the Syntopicon the reader can discover for himself the grouping of the great ideas in the various patterns appropriate to distinct and related subject matters In doing this he will be aided primarily by the Cross References and the Introductions and also to some extent by the Inventory of Terms Instead of constraining him by dogmatically imposing one against any other construction of the fields of learning the Syntopicon leaves the reader free to find and even facilitates his finding the various and often conflicting constructions that have been made in the tradition of the great books

IT MAY BE OBSERVED THAT OF THE VARIOUS FIELDS OF LEARNING named above some are also names of great ideas whereas others which seem to be of equal importance are not This fact requires some explanation It also raises the question whether the great ideas are all ideas in the same sense Is the idea which signifies

a field of learning or a subject-matter such as mathematics physics or theology the same sort of conception as the ideas which signify basic notions in that particular field? Is the chapter on PHYSICS for example on the same level with the chapters on CHANGE ELEMENT MATTER SPACE TIME?

Clearly there is a difference between these two orders of ideas The conception of a science a subject matter or a field of inquiry is obviously different from the conception of the objects or realities considered in that field One of the basic problems throughout the tradition of western thought has been the division of human knowledge the definition of the departments of learning the nature and order of the arts and sciences Hence among the great ideas certain ideas have developed in the course of thinking about this problem. They are conceptions of the nature of particular sciences or subject matters

But not all subject matters which appear in the most recent classifications of the sciences are discussed at sufficient length in the great books to warrant their taking their place among the great ideas of the whole tradition Psychology for example does not receive as much attention as physics and so there is a chapter dealing with the conception of physics but none dealing with the conception of psychology Instead the consideration of psychology appears primarily as a group of topics in the chapters on MAN and SOUL Grammar likewise does not receive the attention that logic and rhetoric do accordingly there are chapters dealing with the arts or sciences of logic and rhetoric but none dealing with grammar Instead grammar is considered in a group of topics in the chapter on LANGUAGE and also occurs in the chapters on LOGIC and RHETORIC in topics which treat the relation of grammar to these other arts

By consulting the Inventory of Terms the reader will be able to discover in which chapters and under which topics consideration is given to the arts sciences or branches of learning whose names do not appear among the 102 chapter titles It may be useful however to enumerate those chapters which deal with branches of learning or fields of inquiry They are ASTRONOMY DIALECTIC HISTORY LOGIC MATHEMATICS MECHANICS MEDICINE METAPHYSICS PHILOSOPHY PHYSICS POETRY RELIGION SCIENCE and THEOLOGY

With a few exceptions *each of these chapters is devoted entirely to the consideration of a discipline or subject matter*—its definition its scope its principles methods and problems The exceptions are the chapters on ASTRONOMY HISTORY MECHANICS and MEDICINE which are concerned *only in part* with various conceptions of the nature principles and methods of the disciplines named In part they *also* include topics which state issues not *about* these sciences but *within* them—issues about the objects studied in these sciences

The chapter on ASTRONOMY for example includes discussions of celestial phenomena in general and of particular heavenly bodies the chapter on HISTORY includes discussions of the processes and patterns of historical change the chapter on MEDICINE includes discussions of the nature causes and classification of diseases and the general theory of health and considerably more than half the chapter on MECHANICS deals with the basic notions in the science of mechanics and the

concepts and problems of various branches of physical science This part of the chapter on MECHANICS is (along with such chapters as SPACE TIME and QUANTITY) the complement of the chapter on PHYSICS which concerns itself entirely with the character of physics as an experimental science and as a philosophy of nature

The other chapters which are restricted to the consideration of the character and method of particular disciplines also have their complements The chapters on DEFINITION HYPOTHESIS IDEA INDUCTION JUDGMENT OPPOSITION PRINCIPLE and REASONING for example are complementary in the sense indicated to the chapter on LOGIC the chapters on INFINITY QUANTITY SPACE and TIME are complementary to the chapter on MATHEMATICS and so on for each of the chapters which revolve around the nature and methods of a particular discipline

That the chapters on ASTRONOMY HISTORY MECHANICS and MEDICINE are treated somewhat differently from the rest (being mixed chapters rather than exclusively concerned with the idea of a science or of its subject matter) is explained in the same way as the fact that the sciences of economics and psychology are treated in topics subordinate to the ideas of WEALTH and MAN On purely logical grounds these disciplines or branches of learning may be considered as important as ASTRONOMY MECHANICS or PHYSICS but as a matter of historic fact they have not been equally subjected to analysis definition and discussion in the tradition of western thought especially when that is taken as a whole All such differences in treatment reflect the actual content of the great books rather than any theory developed apart from the books or according to the bias of one period or phase of the tradition

WE HAVE NOW SUFFICIENTLY EXPLAINED the selection of the 102 great ideas and their relation to one another and to the concepts enumerated in the Inventory of Terms We have distinguished whatever was based in the treatment of the ideas on purely pragmatic considerations or reasons of convenience from policies which were based on theoretic principles reflecting the conception of the Syntopicon itself We have observed a number of differences among the great ideas that all are not equally great not equally complex in structure or extensive in scope that they vary in the range of subject matters to which they pertain or in the emphasis they receive in different periods or phases of the western tradition that they are not all on the same level some being concepts of the branches of human learning others concepts of the objects of human inquiry

One more point of difference among the great ideas remains to be mentioned That is the difference between what might be called the easy and the difficult ideas The measure of this difference is the number of distinct meanings which have been attached to the name of an idea in the tradition of the great books

Two ideas represent the extremes between which all the rest vary One extreme is the chapter on IDEA it almost seems that no two of the great books which expound a theory of ideas use the word idea in the same sense At the

other extreme is the chapter on PUNISHMENT the authors of the great books may differ in their theories of the purpose or use of punishment but they differ very little if at all on the meaning of the word punishment

In proportion to the degree of their systematic ambiguity the great ideas are more or less difficult as subjects for syntopical treatment The names of the great ideas like other words have systematic ambiguity when their various distinct meanings are related according to some principle That the ambiguity be systematic is obviously indispensable to the unity of each chapter dealing with a great idea To preserve the unity of a chapter some intelligible relation must obtain among all the senses in which its principal term is used in the topical development of the idea *The unity of each chapter depends on the existence of a common thread underlying all the twists in meaning that its principal term undergoes*

Sheer equivocation—that is the use of the principal term in two absolutely unrelated meanings—would divide the chapter into two parts with no reason for their being together except a purely verbal identity of accidental origin Hence in proportion as the word expressing an idea is more ambiguous the danger is greater that the systematic ambiguity may verge upon sheer equivocation

The handling of the systematic ambiguity itself and the avoidance of sheer equivocation are the two aspects of the semantic difficulty encountered in treating almost all of the great ideas because of their manifold or complex significance The solution of this difficulty—different in different chapters according to the precise nature of the semantic problem in each—was achieved by means of the topical subdivision of the great ideas The order and relation of the topics made it possible to take care of the order and relation of the various meanings of the idea A fuller statement of the way semantic difficulties were overcome in the construction of the *Syntopicon* belongs therefore to the next section of this essay which deals with the Outlines of Topics

II THE OUTLINES OF TOPICS AND THE CROSS-REFERENCES

THE TOPICS ARE THE BASIC UNITS OF THE SYNTOPICON They perform a double function The Outline of Topics in each chapter is the analysis of a great idea setting forth its various meanings its themes and problems and the individual topics serve as the immediate headings under which are assembled the references to the discussion of each particular subject in the great books The topics are the major subdivisions of the discussion in the sphere of each of the great ideas as the ideas are the main divisions of the whole discussion in the great books As each idea represents a general field of discourse—a domain of learning and inquiry—covering a variety of related themes and problems so under each idea the various topics represent the themes and problems which are the particular subjects of discussion in that field

To understand how the topics perform these two functions—that of analyzing the ideas and that of providing headings for the references—it is necessary first to consider the nature and variety of the individual topics and second to exam

ine the structure of the Outlines of Topics in the light of the principles which determined the order of the topics the selection of certain topics and the omission of others

A topic is essentially a subject for discussion The Greek word *topos* from which topic is derived literally means a *place* Its literal meaning is retained in such English words as topography and topology which signify the study of physical or geometrical places The conception of a topic as a subject for discussion is a metaphorical extension of this root meaning A topic is a logical place it is a place where minds meet to consider some common problem or theme

The minds may agree or disagree they may argue the matter from different points of view they may contribute to the discussion in a variety of ways—by offering examples by proposing definitions or hypotheses by stating analyses or arguments by debating what has already been said or by advancing a new view But whatever form each contribution takes it must be relevant though it need not be relevant in the same way or to the same degree The various contributions are relevant to each other through their relevance to the common theme or problem and this gives unity to the variety of things being said

A topic then is a place where minds meet through being relevant to a common subject of discussion It is a place at which an intelligible exchange of thought insight or opinion can occur We recognize this when we refer to the topics of a conversation and thereby we also acknowledge that a conversation in order to be good must have topics The more conscious it is of its topics the better a conversation is the better it can sustain relevance as it shifts from theme to theme

In this sense the conception of the Syntopicon is inseparable from the conception of the tradition of western thought as a single great conversation in which the best minds of every period and persuasion have participated As the units of any good conversation are its topics so the units of the great conversation are the 3000 topics under which the Syntopicon cites relevant discussion in the great books If the notion of the great conversation had been a myth the Syntopicon could not have been constructed at all To say that these two volumes of *The Great Ideas* make possible a syntopical reading of the great books is to say also that they bear witness to the actuality of the great conversation

The traditional conception of a topic belongs to the logic of discussion—of dispute controversy or any other exchange of opinion among men It is not necessary that every topic be disputed for it to be true that every topic is necessarily disputable Wherever a difference of opinion is possible or wherever a variety of relevant views is conceivable there a topic can be formulated for there will be a meeting place for discussion According to this understanding of the nature of a topic the 3000 topics of the Syntopicon are the meeting places of western thought They are not possible but actual topics Discussion of each of them can be found in the tradition of the great books

To accord with its logical function a topic must have a certain grammatical and perhaps even rhetorical form For example a topic is not a proposition It

neither asserts nor denies anything It is neither true nor false It would be inappropriate therefore to state a topic in a declarative sentence

If we consider the relation of law to liberty we can assert in a proposition that the supremacy of law *is* the principle of political liberty or we can deny this if we say it *is not* the principle But topic 7b in the chapter on LAW does neither and permits both This topic— The supremacy of law as the principle of political liberty —merely presents for consideration one traditional formulation of the relation of law to liberty

It may be supposed that if a topic states a problem it should be put in the form of a question For example LAW 7b might have been expressed thus Is the supremacy of law the principle of political liberty? or Whether the supremacy of law is the principle of political liberty? But the interrogative form of statement is almost as restrictive as the declarative It seems to call only for a Yes or No answer If the issue were as simple as this it might have been most explicitly expressed in the form of a dilemma *Either* the supremacy of law is the principle of political liberty *or* it is not But a dilemma of this sort does not exhaust all the relevant possibilities It is therefore a bad phrasing of the topic and at the same time indicates what is wrong with the interrogative phrasing It limits the topic to one question or one issue

The topic concerning the relation of law to liberty raises more than one question Its phrasing permits such questions as In what sense is the supremacy of law the principle of political liberty? Furthermore as phrased the topic allows for more than an affirmation or a denial It permits the expression of doubt on the subject it permits the formulation to be entertained as an hypothesis for the purpose of seeing what consequences follow it is open to a variety of explanations or reasons for thinking that the supremacy of law is or is not the principle of political liberty it is even open to the adduction of examples—particular instances in history or fiction which show the dependence of political liberty upon the supremacy of law or the opposite

A topic in short must have greater amplitude than any other logical form of statement The familiar grammatical forms of the declarative or interrogative sentence or even the complex sentence which expresses a dilemma are therefore inappropriate for the statement of topics Since it must be able to include all these and more the statement of a topic must be less determinate in verbal structure

It is easier to say what a topic is not than what it is or should be If it must always be a less determinate expression than a sentence and if it must usually be a more complex expression than a single word or pair of words (which are the verbal expression of terms such as the great ideas) it would seem to follow that the proper expression of a topic is a phrase—often perhaps a fairly elaborate phrase involving a number of terms and signifying a number of possible relations between them This general description of the grammatical form of a topic does not however convey an adequate notion of the extraordinary variety of possible phrasings

An examination of the phraseology employed in the statement of the 3000 topics of the Syntopicon will reveal many types of topical statement Some topics are simple and others complex and of the complex topics some involve two and some more than two component phrases related as coordinate as primary and secondary or in some other way For example The ideal of the educated man (EDUCATION 1a) is a simple topic The right to property the ownership of the means of production (LABOR 7b) is a complex topic and The use and criticism of the intellectual tradition the sifting of truth from error the reaction against the authority of the past (PROGRESS 6c) is a more complex topic We shall return presently to the problem of the complex topic and especially to the consideration of the relation of its parts

For the moment let us examine the various ways in which topics—simple or complex—are phrased The following is a far from exhaustive sampling of the types of topical statement but among the 3000 topics of the Syntopicon there are many instances of each type

COURAGE 1 The nature of courage

DIALECTIC 1 Definitions of dialectic

CHANCE 1 The conception of chance

GOVERNMENT 1*e* The attributes of good government

MAN 1 Definitions of man conceptions of the properties and qualities of human nature

PLEASURE AND PAIN 2 The causes of pleasure and pain

ART 7*a* Art as a source of pleasure or delight

LABOR 3 The kinds of work and the relationship of different types of workers

MEDICINE 5*b* The classification of diseases

HAPPINESS 2*b*(2) Pleasure and happiness

CAUSES 3 Causality and freedom

COURAGE 7*c* Courage in war

HABIT 3*c* Instinct in relation to reason

ARISTOCRACY 2 The relation of artistocracy to other forms of government

CUSTOM 1 The distinction between nature and convention its application to the origin of the state and of language

CONSTITUTION 1 The difference between government by law and government by men the nature of constitutional government

FAMILY 2*b* Comparison of the domestic and political community in manner of government

JUSTICE 3 The duties of justice compared with the generosity of love and friendship

ART 11 Myths and theories concerning the origin of the arts

DEMOCRACY 5b The theory of representation

GOVERNMENT 1 The general theory of government

EVOLUTION 4 The problem of evolution the origin of plant and animal specie

CHANGE 13 The problem of the eternity of motion or change

ELEMENT 5b Arguments for and against the existence of atoms the issue concerning the infinite divisibility of matter

POETRY 9b The issue concerning the censorship of poetry

OPINION 5b Advantages and disadvantages of freedom of discussion

EDUCATION 8b The economic support of educational institutions

EXPERIENCE 6b The role of experience in politics the lessons of history

The foregoing examples illustrate various forms topics take according to the different kinds of subjects they propose for discussion Some deal with the nature of a thing or its definition some with its qualities or attributes some with its causes and some with its kinds some deal with distinctions or differences and some with comparisons or contrasts some propose a general theory for considera tion some present a problem and some state an issue Some—such as the last three above—are difficult to characterize by any formula The reason for all these types of topical statement—and others not illustrated in the examples given—cannot be explained without reference to the Outline of Topics as a whole

In the Outline of Topics for each chapter many different kinds of topics are necessary to cover the whole field of discussion represented by a great idea Thus for example a topic like COURAGE 1— The nature of courage —will occur in many chapters for many chapters open with a consideration of the nature of the thing signified by their principal term A topic like ARISTOCRACY 2— The rela tion of aristocracy to other forms of government —will appear frequently for the discussion of the principal term usually involves the consideration of its rela tion to other terms a topic like EMOTION 2 The classification and enumeration of the emotions or LABOR 3 The kinds of work and the relationship of differ ent types of workers will often occupy a place in an Outline of Topics because the classification or enumeration of kinds is a matter considered in many fields of inquiry or discussion The same can be said for the topics which state theories problems issues definitions attributes distinctions comparisons and so on

Under a great idea many different kinds of subjects are discussed and these are represented by the various topics set forth in the Outline of Topics for each of the great ideas It is not surprising that the discussion of one idea should re-

semble in many respects the discussion of another hence we should not be surprised to find a certain sort of topic in chapter after chapter Some kinds of topics will of course appear more frequently than others some chapters will have a much greater variety of topics than others

THE TOPICS NOT ONLY VARY IN TYPE according to their subject matter they also vary in scope or amplitude according to the broadness or narrowness of the theme they enunciate Some are open to every type of discussion whereas others seem to impose certain restrictions upon the type of discussion that would be relevant A topic like Arguments for and against the existence of atoms specifically calls for arguments In contrast a topic like The issue concerning the censorship of poetry permits in addition to arguments for or against censorship discussions of the issue itself dealing perhaps with its significance its presuppositions or implications and its relation to issues concerning the censorship of other forms of expression Even broader or more open in this respect are such topics as The differen e between government by law and government by men or Art as a source of pleasure or delight

In terms of what a topic purports to be every topic should have a certain minimum amplitude It should solicit and allow the expression of opposite opinions on whatever is the subject of discussion Whether the topic happens to be stated positively or negatively it should cover both negations and affirmations of the point in question It may have greater amplitude than this but this much at least it should have Since a topic is a meeting place for minds that disagree or differ it is defective if its wording suggests one point of view or one position on an issue where many are possible or where opposite arguments or views are known to exist

What has just been said applies to topics generally as statements having a certain logical character But because they are intended to function as the commonplaces of the great conversation the topics of the Syntopicon should have scope or range of another sort in addition to logical amplitude Ideally they should be so conceived and so phrased that each topic is able to solicit or to cover contributions from the whole range of authors and works included in *Great Books of the Western World* and from the books of the Bible as well This means that the ideal topic is one which is open to contributions from the poets and historians as well as the scientists philosophers and theologians which can cover every variety of doctrine or opinion that has been expressed in the tradition of the great books and which is equally receptive to the imagination and thought of ancient mediaeval and modern times

These are difficult requirements to meet They demand a comprehensiveness difficult to achieve without falling into a vagueness which would render the topic useless or unintelligible They demand in the formulation of the topic an almost perfect impartiality on the level of thought and neutrality on the level of language The more various and opposed the partisan views a topic tries to cover the more difficult it is for the topic to be conceived impartially that is without

prejudice to any of these views so that it seems to be formulated as if from *no* point of view The *more diverse and incompatible the terminologies in which* the opinions to be covered are expressed the more difficult it is for the topic to be worded neutrally that is without verbal coloration from one or another of the many vocabularies that have been used for the expression of relevant opinions

In view of such difficulties it could hardly be expected that the ideal would be realized in the formulation of every one of the 3000 topics in the Syntopicon Yet it is realized in many and approximated in a fairly large proportion of the rest Those which fall short of the ideal seem to be of two main types

(1) Some topics are so conceived and phrased that their coverage is restricted to analytical or argumentative discussions—discussions of the sort which are to be found in expository works of science philosophy and theology or in the discursive passages of poetry and history whether in the speeches of historical or fictional personages or in the comments of the poets or historians themselves *The conception and wording of the topic tends to exclude exemplary* or imaginative material of the sort to be found in the narrative passages of history or fiction or in other instances the topic tends to exclude material of purely illustrative significance such as reports of experiments in scientific books These topics fall short of the comprehensiveness of the ideal topic by virtue of the type of material they reject

(2) Some topics are so conceived and phrased that their coverage is restricted to the doctrines theories or opinions of one part period or phase of the whole tradition The limitation on the range of materials which are admissible under such topics may be more or less stringent Least restricted are those topics which fail to comprehend both pagan and Christian literature because they are so conceived and worded that they apply to one or the other but not both of these two major phases of the western tradition More restricted are those topics so conceived *and worded as to apply only to a certain group of authors sharing a com* mon doctrine or vocabulary Most restricted are the topics which cover the thought of a single author The last represents the extreme opposite of the ideal topics which cover the thought and imagination of every period and every variety of doctrine or opinion no matter how they may be verbally expressed But all three of these defective topics fall short of the ideal by virtue of their acknowledged failure to be impartial in thought or neutral in phrasing

THE SECOND OF THE TWO MAIN TYPES OF DEFECTIVE TOPICS fails to perform the logical function of a topic and also fails to do what the topics were *normally* intended to do in the construction of the Syntopicon Logically a topic should be hospitable to differences of opinion or opposite views on the same subject If for example there are two or more contrary views on a given subject it should be possible to formulate a topic which indicates the subject of the controversy in a manner that is impartial to all sides But this was not always possible because of difficulties inherent in the materials to be covered It sometimes became necessary in constructing topics appropriate to the content of the great books to state con

trary views in a *set of topics* each worded to fit the particular view it represents This *set of topics* then performed the logical function which ideally a single topic should perform and from the point of view of the Syntopicon the set of topics provided the remedy in all those instances in which logically defective single topics seemed to be unavoidable It had the requisite comprehensiveness for a syntopical reading of the great books

Before we examine the remedy it may be useful to examine the reason it was necessary The authors of the great books tend to have special vocabularies This has little to do with the diversity of the languages in which they originally wrote it is rather the result of the diverse *terminologies* they use to express their thought This is as apparent in English translations of their works as it is in their original languages

The more inventive and fecund a great mind is the more it will shape the language it uses to fit its thought To express a new idea or insight a new word is invented or an old word given a novel meaning Sometimes in the development of his own characteristic vocabulary a great writer uses a new word for an old idea which he has appropriated and assimilated to his own thought Sometimes the opposite occurs the traditional word is appropriated or borrowed but the idea which it long expressed is replaced either by a totally new or at least by a variant conception

It can be said without exaggeration that no two authors of the great books have identical vocabularies This does not mean that they share no common terms—identical words with identical meanings On the contrary even those who seem to be most divided by the differences in their terminologies give evidence of belonging to the same tradition by their common acceptance of a large number of terms Yet from the extreme at which they share a minimum number of important terms to the extreme at which their basic vocabularies are much more alike than different this much can be said of *any two authors of the great books* first that they use some words in the same way and some differently and second that when they use words differently they are either expressing the same thought in different words or are using the same word to express wholly or partially different notions

These facts do not make it impossible for the tradition of the great books to have the qualities of a good conversation But the necessity of shifting from the vocabulary of one to the vocabulary of another makes it difficult often extremely difficult to discover and point out when the authors are talking about the same idea and in what way their remarks are relevant to the same theme These are the semantic difficulties which the Syntopicon had to overcome in order to reveal and record the existence of the great conversation

For the most part differences in terminology do not make it impossible for topics to cover all authors who make some contribution to the discussion of a particular theme Even though they do not all use the same word to express their thought or do not attach the same meanings to the words they use in com

mon it is usually possible to find a neutral phrasing for the topic If the relevant authors use the same words with different—but *related*—meanings the language of the topic will have the systematic ambiguity necessary to cover these variations If the relevant authors do not all use the same words to express their thought but use words which are closely related in meaning then it may still be possible to find a neutral phrasing for the topic

This may be achieved by formulating the topic in the words of ordinary discourse words which are not specially characteristic of any of the authors Another method is to phrase the topic in the words used by one author or group of authors This can be done without prejudice to the thought of the others when the key words in the distinct vocabularies of the several authors are related as synonyms It may even be possible to use synonyms in the phrasing of the topic to represent the vocabularies of different authors By any of these methods the wording of the topic can be given sufficient systematic ambiguity to carry all the related meanings

Sometimes however the meanings which different authors attach to the same word are *not closely related* sometimes an author has coined words to express his meaning or given *certain words or phrases the stamp of his own doctrine* sometimes the words used by an author have overtones or systematic implications which make it impossible to find synonyms for them in the language of other authors or in the vocabulary of ordinary speech In all these cases a single topic to cover all the authors concerned would require phrasing so vague or so general that it could not contribute anything to the analysis of the idea under which it occurred Such semantic difficulties were usually solved by the construction of a *set of topics* each phrased in the language characteristic of particular authors or groups of authors The unity of the set was indicated by a topic which served as the heading under which the particular topics were assembled For the purpose of stating this unity a vague or general phrasing of the heading was satisfactory since the content of the discussion could be sufficiently indicated by the more explicit phrasing of the subordinate topics

For example in the Outline of Topics for the idea of DIALECTIC four topics state four distinct theories of the nature of dialectic The heading for the group of topics— 2 Diverse theories of dialectic —merely indicates that the subordinate topics state the different conceptions to be found in the tradition of the great books The four topics are phrased in a manner appropriate respectively to the thought of Plato Aristotle Kant and Hegel and Marx

2*a* Dialectic as the pursuit of truth and the contemplation of being

2*b* Dialectic as the method of inquiry argument and criticism in the sphere of opinion

2*c* Dialectic as the logic of semblance and as the critique of the illusory employment of reason beyond experience

2*d* Dialectic as the evolution of spirit or matter

The use of the words or matter in topic 2d shows how a single topic can be so phrased as to cover the thought of authors whose positions have a certain affinity even though they disagree as much as do Hegel and Marx For both Hegel and Marx dialectic is an evolution Phrasing the rest of the topic in the alternative (viz of spirit or matter) enables it to associate under one heading the Hegelian conception of the dialectic of spirit and the dialectical materialism of Marx

Another example can be found in the chapter on IDEA Here the six topics which appear under the general heading— 1 Doctrines of idea —represent phrasings appropriate to groups of authors or to single authors The six topics are

1a Ideas or relations between ideas as objects of thought or knowledge the ideas as eternal forms

1b Ideas or conceptions as that by which the mind thinks or knows

1c Ideas as the data of sense experience or their residues

1d Ideas as the pure concepts of reason regulative principles

1e Ideas in the order of supra human intelligence or spirit the eternal exemplars and archetypes the modes of the divine mind

1f Idea as the unity of determinate existence and concept the Absolute Idea

Again it can be pointed out that the wording of topics 1a and 1e permits the association of authors whose doctrines are affiliated even though they do not agree—Plato with Locke in the case of topic 1a Spinoza with Aquinas and Augustine in the case of 1e

Sometimes however a topic that is restricted to the doctrine of one author may have to be introduced into a set of topics all the rest of which have general or unrestricted range This happens most frequently when a particular author makes a contribution to the conversation which no one else anticipates or echoes Thus in the chapter on MEMORY AND IMAGINATION under the heading of a general topic a specially phrased subordinate topic had to be introduced for the contribution of Freud The general topic was 8 The nature and causes of dreaming the subordinate was 8d(1) The manifest and latent content of dreams the dream work

In the chapter on LABOR under the general heading 7 Economic and political justice to the laborer a subordinate topic specially phrased had to be introduced for the contribution of Marx 7c(3) The proletariat as a revolutionary class its revolutionary aims

In the chapter on BEING under the general heading 7b The distinction between substance and attribute accident or modification independent and dependent being a specially phrased subordinate topic had to be introduced for the contribution of Descartes and Spinoza 7b(4) Extension and thought as dependent substances or as attributes of infinite substance

These restricted or doctrinal topics are *exceptions* to the rule Most topics have a neutral phrasing and a systematic ambiguity which permit them to comprehend the whole tradition and all differences in doctrine or opinion The great majority are topics like The happiness of the individual in relation to the happiness or good of other men (HAPPINESS 5a) or Chance necessity and design or purpose in the origin and structure of the world (CHANCE 3) or The political regulation and censorship of education (EDUCATION 8c) Topics of this sort contain no words prejudicial to the thought of any author and impartially cover every variety of relevant opinion in the whole tradition of western thought no matter how violently the opinions may differ

In short the topical ideals of comprehensiveness and impartiality were achieved in the Syntopicon either by single topics or by sets of topics which comprehended the dialectical development of a concept or an issue in western thought The rule followed was to employ single topics wherever they could be constructed and to construct a set of doctrinal topics or to introduce a doctrinal topic into the context of others *only when the semantic difficulties could not be otherwise surmounted.*

TO FOLLOW THE RULE OF USING SINGLE TOPICS wherever they could be con structed and to approach the ideal of making them as comprehensive as possible it was sometimes both necessary and desirable to formulate a complex rather than a simple topic

Examples of these two kinds of topics have already been given The most obvious distinction between them can be most precisely stated in grammatical terms The simple topic is undivided its elements are words all of which belong to the same phrase The complex topic is divided its divisions are indicated by two kinds of punctuation A colon divides the complex topic into its two main parts The first of these two parts is usually undivided but the second may be divided into two or more subordinate parts by semi colons The two main parts of a complex topic are always separate phrases when the second of these is di vided its parts are usually separate phrases

From this grammatical description of the complex topic it might be inferred that considered logically it is always a union of two or more simple topics each expressed by separate phrases But this is not always the case Complex topics seem to fall into three principal types and their differences must be examined in order for their several distinct functions to be understood

(1) Sometimes the phrase following the colon does not represent a separate topic but merely makes the meaning of the phrase preceding the colon clearer in some way—by expanding it by specifying it even by illustrating it The colon separating the first phrase from the one or more phrases which follow is roughly equivalent in meaning to the words that is to say or such as The first type of complex topic is therefore only grammatically not logically complex and cannot be broken up into two or more separate topics

The following examples illustrate the first type of complex topic

HISTORY 4b The laws and patterns of historical change cycles progress evolution

CITIZEN 8 The idea of world citizenship the political brotherhood of man

EDUCATION 2 The kinds of education physical moral liberal professional religious

CONSTITUTION 7b The safeguards of constitutional government bills of rights separation of powers impeachment

JUSTICE 2 The precepts of justice doing good harming no one rendering to each his own treating equals equally

EXPERIENCE 7 Mystical or religious experience experience of the supernatural

EVOLUTION 4c The origin of new forms of life special creation spontaneous generation or descent with modification from older forms

SIGN [illegible]a The first and second imposition of words names signifying things and names signifying names

(2) In the second type the separate phrases of a complex topic represent the phrasing of the same topic or related topics in a manner appropriate to different authors In some cases the difference between the first and second phrasing is largely verbal it is almost as if the *same* topic were being phrased in parallel ways In other cases the difference is doctrinal as well as verbal Here the phrase which precedes and the phrase which follows the colon express more or less distinct topics which are like two closely related doctrinal topics Clearly it is only in the second case that the complex topic could have been broken into two separate topics

The following examples illustrate the second type of complex topic (In these illustrations the authority for the doctrine is indicated in parentheses)

JUDGMENT 8b Analytic and synthetic judgments (*Kant*) trifling and instructive propositions (*Locke*)

SOUL 2b The order connection and interdependence of the parts of the soul (*Plato Aristotle Aquinas*) the id ego and super ego in the structure of the psyche (*Freud*)

SENSE 3d(3) The estimative or cogitative power (*Aquinas*) instinctive recognition of the harmful and beneficial (*Darwin Freud*)

QUALITY 2b Primary and secondary qualities (*Locke*) the related distinction of proper and common sensibles (*Aristotle*)

Of the foregoing examples JUDGMENT 8b illustrates a grammatically complex topic which is logically simple the two doctrinal phrasings are parallel phrasings

of the same topic On the other hand SOUL 2b illustrates a logically complex topic the two parts of which are distinct topics and represent related doctrines in the theory of soul

In some instances the topic which precedes the colon is generally phrased while that which follows is the same topic phrased in the language of a particular doctrine For example

FAMILY *7d* The emotional impact of family life upon the child the *domestic triangle the symbolic roles of father and mother (Freud)*

In some instances what follows the colon is itself divided into subordinate parts by a *semi colon These subordinate parts may be related as two parallel doctrinal* topics For example

SENSE 3*c*(4) The distinction between sensation and perception (*James*) the accidental sensible (*Aristotle*) complex ideas of substance (*Locke*)

(3) In the third type the separate phrases of a complex topic represent distinct but related topics Here the related topics are all phrased in the language of common speech *They do not express the doctrines of particular authors or* groups of authors These topics are all logically as well as grammatically complex in every case they could have been broken up into separate topics though in many instances giving them independent status would have necessitated a more explicit or elaborate phrasing of each The union of these potentially independent topics into a single complex topic is justified by the logical relation between the parts They are related aspects of a problem or issue or they are related *points in the discussion of a theme which is itself complex Sometimes the parts* are logically coordinate in which case the topic preceding and the topic following the colon have equal weight neither restricts the meaning of the other Sometimes the parts are not coordinate the one or more topics following the colon *are logically subordinate to the one preceding it in which case the primary topic* controls and limits the meaning of the subordinate parts

The following examples illustrate the third type of complex topic with *coordinate* parts

EVOLUTION *5b* Competition in mating sexual selection

INFINITY *4b* The infinite divisibility of matter the issue concerning atoms

SCIENCE *6b* *The place of science* in society the social conditions favorable to the advancement of science

JUSTICE *9f* Justice between states the problem of right and might in the making of war and peace

The following examples illustrate the third type of complex topic which has a first or *primary* topic followed by one or more *subordinate* topics

STATE 2c The source or principle of the state s sovereignty the sovereignty of the prince the sovereignty of the people

SPACE 2c Space as a medium of physical action the ether and action at a distance the phenomena of gravitation radiation and electricity

PHYSICS 4b Experimental discovery inductive generalization from experiment the role of theory or hypothesis in experimentation

MEDICINE 1 The profession of medicine its aims and obligations the relation of physician to patient the place of the physician in society

IN A WHOLE OUTLINE OF TOPICS distinct topics are logically related in two ways they are either coordinate or one is subordinate and the other is its supraordinate This is clearly parallel to the two sorts of relation between the principal parts in a complex topic of the third type It is reasonable therefore to ask why certain topics which are logically coordinate or logically supraordinate and subordinate should be related in these ways as separate topics whereas other topics which have the same logical relationships to one another should be related as the parts of a single complex topic

In differentiating between topics to be given independent status and topics to be united into a single complex topic two principles were followed The first was the principle of comprehensiveness A number of related topics were united into a single complex one when their union seemed to be required for a comprehensive discussion of the matter under consideration The discussion each would have covered if it had been left as an independent topic would have been fragmentary or partial The decision to unite topics was never made in the abstract but always in terms of the content of the great books that is in terms of how their various contributions to the discussion could be most perspicuously organized In short related topics were united to form a complex topic when the coverage of the complex topic more nearly approximated the syntopical ideal than the simple topics would have had each been treated as independent

The second principle involved the ideals of simplicity and unity and thus acted as a check to the first principle If two simple topics were sufficiently comprehensive in their coverage then even though logically related they were given independent status on the ground that simple topics have greater unity than can be achieved by the union of separate topics no matter how closely related The greater the unity of a topic the greater can be the mutual relevance of the contributions to the discussion it covers

This second principle worked automatically when two logically related topics were themselves complex Complex topics were always made independent But when the problem was whether certain simple topics should remain independent or be united the two principles of comprehensiveness and simplicity had to be applied with discretion sometimes in favor of comprehensiveness and sometimes in favor of unity It is impossible to state all the reasons of convenience or

policy which operated in such decisions or to report how particular judgments were made That such decisions could not always be made with certainty or by rule of thumb is indicated by the fact that during the construction of the Syntopicon many topics which were independent at one stage of the work were later merged and complex topics were frequently broken into a number of simple ones

The final product of all these working judgments is manifest in the structure of the Outline of Topics for each of the great ideas The numbering of the topics in each Outline indicates which topics are related as coordinate and which are related as supraordinate and subordinate[2] But it is not always possible to tell from its grammatical form whether a given topic is simple or complex since as we have seen some grammatically complex topics are logically simple Nor is it always possible to tell at once whether a logically complex topic is of the second or third type or if of the third type, whether its parts are coordinate or supra ordinate and subordinate Sometimes this will be obvious from the wording or construction of the topic but often it will be discoverable only after the discussion it covers has been read and studied

A NUMBER OF OTHER POINTS concerning the structure of the Outlines of Topics call for brief comment

(1) *The relation of supraordinate and subordinate topics* The subordinate topics usually represent an analytical development of the theme or problem stated in the supraordinate topic under which they appear They indicate particular points in the general area of discussion defined by the supraordinate topic As it covers the whole they cover the related parts of the whole Sometimes how ever the subordinate topics represent a set of doctrinal alternatives rather than an analytical development of connected points under the supraordinate Exam ples of this have already been given (see pp 1241-1242)

In the first case the supraordinate may function as a topic in its own right in addition to serving as a general heading for subordinates When it functions as a topic it usually covers a discussion of the whole or general theme whereas the subordinate topics cover discussions of the parts or particular points In rare instances the supraordinate topic introduces a special point of its own in addi tion to stating the general theme which the subordinates particularize But in the second case that is when the *subordinate topics state a set of doctrinal alternatives* the supraordinate serves merely as a general heading[3]

(2) *The analytical order of the Outline of Topics as a whole* The primary topics (*i e* topics 1 2 3 etc) are coordinate in rank but among these coordinates certain kinds of topics normally tend to precede others in the Outline The discussion usually opens with a consideration of the meaning of the idea or of the various ways in which the idea is defined or conceived Almost as frequently the opening topic deals with the nature of the thing signified by the idea or proposes the most general theory or theories in which the idea is involved

The immediately following topics are usually concerned with the principal divisions or classifications of the idea or the thing it signifies (*i e* its kinds types or modes) or with its causes or conditions and with its relation to other ideas or things frequently stated in terms of comparisons or contrasts In some instances this second group of topics deals with the main problems or issues raised by the idea in some instances topics of this sort follow the consideration of kinds causes and relations

The concluding topics usually deal with the significance of the idea in fields of learning and inquiry other than the field in which the idea is a *principal* term or concept or they may deal with the problems or issues raised by the idea in these other fields In any case concluding topics of this character cover phases of the discussion which are plainly subsidiary to the matters dealt with in the opening and middle topics

In chapters on ideas which are susceptible to such discussion the final topic may be concerned with historical considerations or may provide a place for the collection of illustrative materials

(3) *Variations in the structure of the Outlines of Topics* The statements made in (2) above are intended to describe the normal or typical order of the primary topics But of the 102 Outlines of Topics no two are exactly alike in structure or order of development Not all for example open or close with topics of the sort indicated nor do all contain the same variety of intermediate topics or dispose them in the same order

The Outlines vary in a number of other respects They differ strikingly in length or number of topics ranging from the chapter on FATE with only 6 topics to the chapter on MIND with 76 topics They differ almost as much in their analytical detail or the complexity of their structure some chapters have only primary topics or very few subordinates whereas in other chapters almost every primary topic covers a set of subordinates and many of these in turn have subordinate topics of their own The chapters on FATE or COURAGE for example have extremely simple Outlines those on MIND or STATE extremely complex ones

The Outlines also differ in regard to the presence or absence of sets of specialized doctrinal topics Chapters like PUNISHMENT and EDUCATION in which the principal term has a common core of meaning throughout the great books are not embarrassed by semantic difficulties and so do not need to resort to doctrinal topics stated in the language of different authors whereas chapters like IDEA and

MIND beset by semantic difficulties require topics which specify the various senses in which the principal term is used by different authors or groups of authors

Not only in this last respect but also with regard to their differences in complexity length and the order of their topics the Outlines vary with the character of the great ideas they articulate and analyze As each idea is different from all the rest so is each Outline of Topics Each was constructed and written to fit the idea—not the idea by itself but as it has been treated and discussed in the great books.

THE POINT JUST MADE EXPLAINS WHY *these 2987 topics were selected—no more* no fewer and no others—and why they were ordered as they appear in the Outlines It is like the explanation why just these 102 terms were chosen as the great ideas Yet *if the explanation is understood to mean that the Outlines of Topics* were entirely fitted to the great books it is only partly understood This would ignore another factor which shaped the Outlines and ordered the topics even if it did not greatly affect the selection of the individual topics and their phrasing That other factor was the consideration of purely logical criteria in constructing the Outlines To the extent that such logical considerations prevailed the content of the great books was also fitted into the Outlines of Topics

Logical considerations did not always prevail The Outlines of Topics assume the form of analyses but as analyses many of them have logical flaws or deficiencies Certain topics call attention to the absence of others which would be included in a logically rounded analysis of the idea Certain topics seem to be given greater prominence than they would deserve *in a logically balanced analysis and* certain topics are treated with greater analytical refinement than others which *logically deserve the same treatment In addition* the actual order of topics often only approximates the ideal analytical order and sometimes even definitely departs from it

These defects both logical and substantive in the Outlines of Topics are all consequences of the same fundamental fact The Outlines do not represent analyses of the great ideas considered abstractly or in themselves It might almost be said that they are not analyses of the ideas at all but rather of the *discussion* of the ideas in the great books That statement however would be too extreme Though the selection of certain topics and the omission of others were wholly determined by the content of the great books the *order of the topics selected the choice of* the primary topics and the weight or importance given to certain topics were determined partly by the content of the great books and partly by standards of logical precision in the construction of a rounded and balanced analysis

The *Outlines of Topics* therefore represent an attempt to reconcile the demands of logic with fidelity to the syntopical aim of exhibiting the great conversation in all its strength and weakness The actual process by which the Outlines of Topics were progressively formed over a period of seven years reflects the tension between these two interests even as the final product reflects their joint influence

The first drafts of the Outlines of Topics were largely *a priori They were logical*

analyses of the ideas formulated prior to any effort to use the topics as headin s for collecting references to the great books Yet even these first drafts were not entirely *a priori* they were constructed in the light of considerable knowledge of the tradition of western thought To this extent they were *a posteriori* that is empirical or historical rather than purely logical

These original drafts were repeatedly revised in the effort to use each topic as a heading for a segment of the discussion Topics were discarded new topics were added certain topics were merged and others were subdivided a very large proportion of the topics were rephrased again and again and the Outlines as wholes were reshaped whenever substantive alterations in their component parts necessitated logical reorganization or refinement In this process almost all the Outlines went through many drafts At the same time each Outline was scru tinized as a whole for its intelligibility as an articulation and its rationality as an organization of the whole discussion of a great idea

The absence of certain concepts of contemporary importance from the list of the great ideas can be interpreted to mean that those concepts have only recently risen to a prominence they do not have in the tradition as a whole The absence of certain topics from the Outlines can be similarly interpreted The omitted topics cover discussions of recent origin or discussions which though they may have antecedents in an earlier day do not receive as much attention in the great books as they currently attract In marking the points on which the great books are silent these absent topics point to contributions to the great conversation made in our time as well as to *lacunae* in our intellectual heritage

On the other hand the Outlines contain a number of topics which elicit from the great books contributions that are slight in number and variety In certain instances the presence of these topics reflects the effort to make the Outlines as analytically rounded and balanced as the content of the books would permit But in other cases the retention of topics in spite of the slightness of the discussion they cover serves to record the antecedents in the tradition of themes or problems which have become dominant only in our own day

One final point about the Outlines remains to be made They often con tain topics which resemble one another in the matters they propose for discussion This is seldom if ever true of the primary topics The overlapping occurs mainly among the subordinates and in the interest of analytical refinement or balance In the analytical breakdown of two primary topics similar points are often logically relevant In consequence similar topics will appear in the two sets of subordinates If in order to avoid the duplication one of these subordinate topics had been omitted one of the supraordinates would have been left incompletely analyzed and articulated

For example in the chapter on Law under the general heading of topic 4— The natural law —one of the subordinates is topic 4f The relation of natural law to civil or municipal law the state of nature and the regulations of the civil state In the same chapter under the general heading of topic 7— Law and the

state —one of the subordinates is topic 7c The priority of natural to civil law the inviolability or inalienability of natural rights The two topics are by no means identical yet they do have much in common Each propo es a theme that is logically appropriate in the analysis of the general heading under which it falls The decision to include both represents the judgment that the inclusion of partially overlapping topics is a much less serious fault than the logical defect which would result from the exclusion of one of them in order to avoid duplication

The policy which permitted overlapping topics in the same chapter for reasons of analytical completeness had even greater justification in the case of different chapters The great ideas are so related that it would be impossible to construct analytically adequate Outlines of Topics without some topics under one idea resembling some topics under other ideas In the same chapter the resemblance between topics is never more than a similarity—a partial overlapping But between chapters the overlapping may be almost complete The topics may be identical except for a slight difference in phrasing For example the chapter on LAW necessarily includes topic 7b— The supremacy of law as the principle of political freedom —under the general heading of topic 7 Law and the state But there is an equal necessity for including in the chapter on LIBERTY topic 1d — The supremacy of law as a condition of political liberty —under the general heading of topic 1 Natural freedom and political liberty

Such identical topics are the exception rather than the rule For the most part the resemblance between topics of different chapters goes no further than similarity But there is as much reason in the *interest of analytical completeness* for the partially overlapping topics as for the identical ones The chapter on CITIZEN necessarily contains a discussion of The qualifications for citizenship extent of suffrage (CITIZEN 3) this i partially duplicated by a discussion that is unavoidable in the chapter on CONSTITUTION— The justice of different constitutions the extent and character of citizenship under each (CONSTITUTION 5a) Or to take another example the discussion of philosophy necessarily includes the consideration of The relation of philosophy to mathematics (PHILOSOPHY 1b) which approaches that problem somewhat differently from the inevitable consideration of a similar theme in the discussion of mathematics— The service of mathematics to dialectic and philosophy its place in liberal education (MATHEMATICS 1b)

Between any one of the 102 chapters and all the others the number of overlapping topics—either identical or similar in scope—may at first appear large but it will seem less remarkable as one realizes the interdependence of the great ideas Far from concealing the overlapping of topics as if it were a blemish the Syntopicon calls attention to it precisely because it points out the interconnection of the great ideas This is one of the functions performed by the Cross References in each chapter As the Inventory of Terms shows the interrelation of the great ideas by noting the appearance of the same term in topics of various chapters so the Cross References show the interrelation of the great ideas by

noting for the topics of one chapter the topics in other chapters with which they have some affinity

THE CROSS REFERENCES POINT OUT TWO DIFFERENT KINDS of affinity between the topics of one chapter and the topics in others One sort the affinity of similar topics has already been discussed The other sort of affinity exists between a topic in one chapter and topics in other chapters that deal with related not similar matters The latter provide contextual discussion of matters bordering on the theme proposed by the first

For example the chapter on FAMILY contains a discussion of Eugenics control of breeding birth control (FAMILY 6b) the chapter on EVOLUTION goes more fully into the problems of genetics and heredity and contains two sets of topics which provide a general context for the consideration of eugenics in the chapter on FAMILY They are the topics in EVOLUTION headed by 2 Genetic variation in the course of generations and 3 The process of heredity The Cross References in the chapter on FAMILY therefore call attention to the topics in EVOLUTION in the following manner

> *For* A more general consideration of the problems of heredity *see* EVOLUTION 2–3e

The Cross References also perform one other service Sometimes a topic or group of topics is omitted from a particular chapter because while it has relevance to the idea of that chapter it is not indispensable to a rounded or balanced analysis of that idea However this topic or group of topics may be necessarily involved in the analysis of some other idea The Cross References call attention to such supplementary topics

For example the chapter on POETRY might have considered the nature of the fine arts of which poetry is one But the Outline of Topics for POETRY opens with a consideration of The nature of poetry its distinction from other arts To supplement this with a discussion of the general theory of the fine arts presupposed by the distinction of poetry from other arts the Cross References contain the following entry

> *For* The consideration of the fine arts in general *see* ART 7a

Often there is only a shadowy difference between the cross references to such supplementary topics and the cross references to related or contextual topics It rests largely on a sense of the fitness of a particular topic for the Outline of Topics of a particular chapter If the topics cited by the Cross References might have been included in this chapter but were not necessary they can be regarded as supplementary if on the other hand they would have been adventitious or at best peripheral in this chapter they can be regarded as contextual In contrast there is a sharp difference between both these types of cross references and the third type which cites similar or identical topics in this and other chapters—topics which are necessary to all the chapters concerned

The three types of cross references can sometimes be recognized by certain characteristic words in their phrasing The cross references to similar or identical topics often begin with such words as *For* Other discussions of or *For* Another consideration of or *For* Other aspects of The cross references to contextual or related topics usually begin with such word as *For* Matters relevant to or *For* Discussions bearing on or *For* Discussions related to Still another phrasing for the contextual cro s references is *For* The general theory of or *For* The general discussion of [4]

The order of the Cross References follows roughly the order of topics in the Outline The wording of the Cross References generally indicates the topic or group of topics in the Outline for which the particular cross reference to topics in other chapters is being made For example LABOR 1a reads The curse of labor myths of a golden age and the decay of the world The first cross reference in LABOR reads *For* Other discussions of the golden age *see* MAN 9a PROGRESS 1c TIME 8b LABOR 1c reads The pain of labor and the expiation of sin the disciplinary and penal u e of labor The second cross reference in L BOR reads *For* Other considerations of penal labor *see* PUNISHMENT 4b(3) LABOR 1e reads The honor of work and the virtue of productivity progress through the invention of arts for the conquest of nature The third cross reference in LABOR read *For* Matters relevant to the nature of productive work and the factors influencing productivity *see* ART 4 9a–9b EDUCATIO 16 SCIENCE 1b(1)–1b(2) WEALTH 3a

Since the relation between particular topics and particular cross references is immediately obvious from the parallelism in their wording the absence of cross references for some of the topics is also immediately discernible For example LABOR 1d– The social necessity of labor and the moral obligation to work — does not have a cross reference to topics in other chapters No other chapter contains topics *similar enough* or *closely enough related* to this theme to warrant their being cited

This is usually the explanation of the lack of cross references for certain topics But sometimes the omission of cross references for particular topics may have been simply an oversight which is natural enough in view of the magnitude of the comparison involved—each topic with 3000 others And sometimes the omission may represent a debatable judgment concerning the relevance of topics in other chapters to a particular topic in this one or concerning the similarity between a topic in this chapter and those in other chapters Whether other topics are *similar enough* or *closely enough related* may frequently be a difficult and reversible decision

As already pointed out both the Cross References and the Inventory of Terms

[4] Th cross-ref rence to suppl m t ry t p a su lly gn fi d by th sam ope ing w rds as those to th context l top c d g a ma y os fe ce wh ch are t ma k d by y d t nct phrasing may belong to ny n f th hree types. serve to trace the intricate network of relationships among the 102 great ideas Each does this in its own way It should be added that both the Cross References and the Inventory of Terms also serve as instruments for finding particular topics among the 3000 topics in the 102 chapters The Cross References do this by listing the topics of other chapters according to their relevance or similarity to those of a particular chapter Hence the reader while using or studying a particular chapter is informed of the location of germane topics in other chapters The Inventory of Terms lists the fundamentally significant words in each of the topics and in addition the terms which are implied by its meaning Each term is followed by a list of chapters in which related or similar topics appear

III THE INTRODUCTIONS

In the structure of each chapter the Outline of Topics follows the Introduction This essay might have been expected therefore to deal with the Introductions before it discussed the Outlines of Topics

There are two reasons for reversing the expected order First the topics are in a sense integral parts of the great ideas and therefore the examination of the Outlines as analyses of the ideas naturally follows the consideration of the ideas themselves Second the topics state the themes problems and issues with which the Introductions deal The Introduction to each of the great ideas is in part at least a commentary on its topics It is not out of order therefore to examine the commentary after considering the topics commented on

But if this is the proper order then it would seem that it might have been better in constructing the Syntopicon to have placed the Outline of Topics first in each chapter with the Introduction following rather than preceding it But the fact is that the Introductions are *only in part* a commentary on the topics They also deal with the idea as a whole in such a way as to be preparatory for reading the topics They are genuinely introductions *to* the topics as well as commentaries *on* them

The reciprocal illumination of each by the other will be better understood in terms of the purposes the Introductions are intended to serve It will then become clear that the advantage of reading the Outlines of Topics before the Introductions is almost equal to the advantage of reading the Introductions first

Like the Outlines of Topics the Introductions vary from chapter to chapter—not so much in length as in their method of exposition They do not all begin or end in the same way nor do they uniformly treat the same matters or proceed in the same order

The way in which each Introduction deals with a great idea corresponds to the characteristic difference of that idea from all the others The ideas differ in four respects and the Introductions differ accordingly Each idea has a unique structure It also has a unique history The character and intensity of its verbal difficulties are often peculiar to itself The problems and issues it has engendered are different in origin and in the possibilities of their resolution

Nevertheless all the Introductions were conceived and written to perform a common task They were intended to serve the same fourfold purpose corresponding to the four respects in which the ideas differ The Introductions attempt to treat each idea *semantically historically analytically* and *dialectically*

(1) *The semantic aim* It has already been pointed out that most of the names of the great ideas have a range of meanings They have been used by the authors of the great books in different senses and many of them have in addition meanings of recent origin or popularity This is true not only of the principal term in each chapter but also of some of the subordinate terms which appear in the topics Often the meaning of the principal term is affected by the meaning of a subordinate term connected with it in the statement of a topic

The semantic aim of the Introductions is to record the various meanings of the words which have been used to name the great ideas and of the other words which have been used traditionally and currently in discussing the great ideas The Introductions seldom try to do this exhaustively They aim at verbal clarification only where necessary—in order to prevent real agreements from being obscured by differences in language or to discover real disagreements in thought between men who so far as their language goes appear to be saying the same or at least compatible things

Like the other parts of the Syntopicon the Introductions have as their ultimate aim the re-enactment of the great conversation Each Introduction tries to re-create the discussion of a great idea as though the authors contributing to that discussion were engaged in conversation about its major topics—and almost as though they were contemporaries confronting each other in actual discourse rather than dispersed across thirty centuries The semantic aim of the Introductions is to clarify the meanings of the words they use so that they can be heard talking relevantly to one another The Introductions succeed to the extent that they suggest how the great minds of the western tradition exist together in a single universe of discourse

( ) *The historical aim* To collapse thirty centuries of imagination and thought into a single historical moment would seem to be unhistorical or worse antihistorical Yet the Introductions have just been described as doing exactly this since they treat the authors of the great books as if they were contemporaries and use the present tense in reporting their discussion of ideas

Mill and Aristotle for example may be reported as taking one side of an issue on which they are opposed by Plato and Hobbes Lucretius may be said to be more in agreement with Freud on certain matters than he is with anyone in antiquity As far as possible the authors are associated with one another in terms of their thought not their times They are opposed to one another in the same way The centuries can be as *readily* bridged by genuine agreements as they can be divided by disagreements apparent or genuine Neither the agreement nor the disagreement is a necessary function of simultaneity or succession in time

Yet sometimes a certain point of view is characteristic of a period or phase of western civilization Sometimes the political economic and cultural conditions of a time are more than the background of thinking or the environment to which the thought refers they are conditions of the thought itself and therefore of its intelligibility It is unquestionable that some men originate ideas which others borrow and often change There is little doubt that the thought of one whole period influences the thought of a later period either to react against it or to alter it for assimilation Certainly then the succession of the centuries the location of minds in time the relation of thought and imagery to the culture of a period the influence of one mind upon another and one period upon another—certainly all these things are significant features of the great conversation as it develops in time The very word tradition connotes a passing from age to age—both a heritage and an inheritance To consider the tradition of western thought is therefore to deal with the history of ideas

Both sides of the picture contain a portion of the truth—the temporal and the non temporal the historical and the unhistorical Thought transcends time to a certain extent and to a certain extent time conditions thought Ideas have a career in time and therefore a history but they also have an inner logic which transcends history To some extent therefore all minds dealing with the same ideas are contemporary they are together in the same logical if not historical moment by virtue of their agreements and disagreements To deny this is to commit the error of historicism But in some measure minds dealing with the same ideas cannot deal with them in the same way at different historical moments To neglect or ignore this fact is to commit an opposite error which might be labelled transcendentalism

The Introductions try to avoid the fallacies of both extremes by combining the historical with the logical treatment of ideas But they do not try to do equal justice to both aspects of the matter and in consequence do not preserve a perfect balance between the two approaches The primary aim of the Introductions is not historical as it is not semantic It is dialectical The Introductions do not carry verbal clarification further than is necessary to prevent language from obscuring the logical realities—the issues the agreements the disagreements and the arguments For the same reason the Introductions do not engage in the history of ideas for its own sake They remain unhistorical wherever possible and become historical only to indicate places where the history of ideas is itself part of the dialectic of ideas

Not all of the great ideas are involved in an historical dialectic to the same extent At one extreme with ideas like Beauty Chance Courage Definition Education Emotion Happiness Infinity Justice Knowledge Love Nature Opinion Pleasure and Pain Punishment Sense and Tyranny the discussion seems to be comparatively unaffected by the historical location of the minds engaged in it It completes almost the same circle of logical development in every period the focus does not change from time to time the discussion as a whole does not move irreversibly along the line of history The Introductions to

such chapters therefore can be largely unhistorical in their dialectical effort to state the main features of the discussion

At the other extreme with such ideas as ANGEL ASTRONOMY CONSTITUTION DEMOCRACY ELEMENT EVOLUTION FAMILY GOD IMMORTALITY LABOR LOGIC MATHEMATICS MECHANICS PHILOSOPHY PROGRESS PROPHECY RELIGION SIN THEOLOGY WAR AND PEACE and WEALTH the discussion seems to be seriously affected by intellectual and cultural differences between different epochs The whole conversation shifts its ground and changes its focus as it passes in the spheres of politics economics and the sciences from ancient to modern times and in the spheres of religion and theology from pagan antiquity to the Christian Middle Ages or from mediaeval Christendom to the increasingly secular culture of the modern epoch Its starting points are not the same and its logical development takes different directions as the whole discussion develops historically Hence the Introductions to such chapters must be historical in treating the pivotal points of the dialectic

To the extent to which the Introductions treat the great ideas historically they trace their development in a number of ways They may call attention on the *semantic side to changes in the meaning of the basic words from period to* period On the analytical side they frequently note which parts of the idea—which of its topics or themes—occupied the center of discussion at one time but received little or no attention at another Above all in relation to the dialectic of the discussion they try to suggest the actual course of the great conversation By observing its continuities and discontinuities especially the latter they throw historical light on the failures of the dialectic—the failure of minds to meet or join issue or as between the thought of one period and that of another the weakening of relevance to the breaking point

If on the whole the Introductions lean more to the dialectic than to the history of the great ideas the balance is somewhat restored by the fact that under each topic the references to the great books are arranged in historical order The reader who follows the discussion by reading the books or passages in the order in which they are cited will be able to discover for himself many historical collocations and sequences which the Introductions fail to note where they are only suggested or briefly touched on in the Introductions *they are amply documented* in the References

Yet even here the complementary point remains to be made Under each topic the references are set forth in historical order But the books and passages cited under one topic would not be there unless they all satisfied the requirement of relevance They can be relevant to one another only if they are talking about the same thing Such relevance signifies that all the authors belong to the same tradition or in other words that they all participate in the same culture or civilization no matter how it may be subdivided into epochs or phases

From the point of view of world culture which must remain unformed so long as the world remains divided into a number of distinct cultures what we call the culture of the west is unitary in spite of all the separate strands or segments we

can find in it From the point of view of world history which in a strict sense cannot begin until a world culture is formed the thirty centuries of imagination and thought represented in the great books tend to become a single time even as the books tend to belong to a single tradition and culture By taking the point of view of future world history we can imagine how the whole tradition of western culture may some day appear as a single parochial episode In a sense the Intro ductions are making this imaginary construction when they present the great conversation in the present tense as if it were taking place among contemporaries

(3) *The analytical aim* The Outlines of Topics present analyses of the great ideas The Introductions perform an analytical function in commenting on the structure of the ideas as set forth in the Outlines

The Outlines do not explain themselves for the most part the order and subordination of the topics do not need explanation But occasionally the reason for including or giving special prominence to a certain topic or group of topics may not be immediately obvious especially if the matters dealt with are not familiar to contemporary thought The converse is also true Occasionally, the absence of topics which are currently subjects of great interest may deserve a word of explanation The Introductions try to throw light on both these aspects of the Outlines

The major parts of the discussion of a great idea are the fundamental problems and issues in which that idea is involved In commenting on these the Introduc tions usually adopt the topical statement of them in the Outlines Though there is seldom a perfect correspondence between the content of the Introductions and that of the Outlines there is a general conformity between the main points treated in each Their order is not necessarily the same for a discursive treatment of related problems and issues usually demands an order markedly different from that suitable to a topical outline

In many chapters topics will be found in the Outline which are not considered in the Introduction There are two reasons for this First the Outline of Topics for a particular idea usually raises more points of importance or interest than can be treated in a short essay Therefore some must be ignored or mentioned only in passing Second the Outline in a particular chapter frequently includes topics which are similar to or identical with topics in other chapters Hence to avoid repetition and undue length the Introduction to a particular chapter may leave to another chapter s Introduction the treatment of a subject common to both

Wherever possible the Introductions notify the reader that a given topic receives attention or ampler treatment in the Introductions to other chapters Just as the Cross References for a given chapter indicate the relation of its topics to those of other chapters so the Introduction supplies its own cross references to other Introductions in which related matters are discussed In doing this the Introductions not only indicate but often try to illuminate the interconnection of the great ideas In addition to examining the structure of the idea with which it deals it is part of the analytical aim of each Introduction to place this idea in

the larger structure of the whole set of ideas and especially in the constellation of closely related ideas to which it belongs

In performing their function as commentaries on the Outlines of Topics the Introductions usually pay special attention to the groups of doctrinal topics which set forth the positions or views of different authors in their own language The fact that doctrinal topics could not be avoided in the Outline for a particular chapter indicates both semantic and analytical difficulties which the mere statement of doctrinal topics seldom solves completely Wherever possible the Introductions attempt to deal with these difficulties discursively and to clarify points that the elliptical statement of the topics necessarily leaves obscure. But the groups of doctrinal topics call for more than clarification They usually represent a profound difference of opinion or a many sided controversy in the tradition of the great books In treating such matters the Introductions go beyond their semantic and analytical functions to the dialectical which is their primary aim

(4) *The dialectical aim* The Introductions attempt to report some of the major issues or basic intellectual oppositions in the sphere of each of the great ideas That this is their primary aim does not imply that disagreement is the dominant feature of the intellectual tradition On the contrary agreement in almost every case accompanies disagreement that is on most of the great issues the opinions or views which represent opposite sides of the dispute are shared by several authors often by many Seldom do we find a solitary exponent of a controversial position

The great issues align men side by side as well as range them against one another If in the rare case disagreement does not carry with it a proportionate amount of agreement that disproportion is balanced by the fact that on a small number of fundamental questions there seems to be no disagreement among the authors of the great books On the whole there is as much agreement as disagreement in the tradition of western thought—agreement across the centuries as well as among contemporaries and disagreement likewise

The primacy of the dialectical aim of the Introductions follows from the primacy of the mind s concern with truth The other aims represent preparatory considerations—how language has been used to express thought how thought has been affected by historic circumstances the ground thought has covered in dealing with the great ideas All these preparations lead to the question they leave unanswered Where does the truth lie in all the thinking that has been done on each of the great ideas? Where is thought true and where is it false?

The dialectical aim of the Introductions is primary because it is motivated by this fundamental consideration In their concern with agreements and disagreements the Introductions approach the question of truth and falsity The agreement of men about the nature of things in any field of inquiry establishes some presumption of the truth of the opinions they commonly hold Their disagreement establishes the counter presumption—that none of the opinions in conflict whether shared or not may be wholly true Among conflicting opinions one may

of course be wholly true and all the rest false but it is also possible that each expresses some portion of the whole truth and except for flat and isolated contradictions (which seldom if ever occur in the great conversation) it is even possible that all the conflicting opinions may be false just as it is possible for that opinion to be false on which all seem to agree Some opinion as yet unexpressed—at least not discoverable in the great books or in other books—may be the truth or nearer to it In short agreement and disagreement raise no more than a presumption of truth and falsity a presumption which further inquiry can always challenge or rebut

This being the case the Introductions in their dialectical effort must fall short of answering the question which is the mind s fundamental concern They would be dogmatic not dialectical if on any of the great issues they asserted or tried to prove the truth or falsity of any view They would simply become one more voice in the perennial debate on fundamental issues They refrain from doing this in order to do something else

The point is not that one more voice carries no weight in the forum of human discussion The point is rather that a different type of contribution to the pursuit of truth can and should be made Moreover it is the only contribution the Introductions can properly make as an integral part of a syntopicon of the great books These are not isolated essays published by an author in his own name They are Introductions to chapters on the great ideas in the great books They introduce the Outlines of Topics Together with the topics they lead the reader to the References and prepare him to read interpret and judge what he finds in the books and passages there referred to

The special contribution the Introductions try to make to the debate of perennial issues consists in being resolutely dialectical throughout The special quality they try to achieve can be summarized in two words dialectical objectivity[6]

[6] The w rd d ale t c l b j ct ty m y be n w b t th ideal th y pres is ld It has al ay been the d l f tl e cy lopa dist a d the g eatness of e y l paedia can almost be m as ed by the closeness of t pp m t t th d l

They try to look at all sides and take no sides Of course they fail to achieve so exacting an ideal They may succeed as the topics do in taking no sides Just as the topics state subjects on which there can be different opinions without affirming or denying any of the possible opinions so the Introductions try to present the issues without prejudice to any partisan point of view and treat conflicting positions impartially But it is easier to take no sides than to look at all sides In this latter respect the Introductions undoubtedly fail

To begin with it is never possible to say that *all* possible sides of an important issue have been examined They can never be exhaustively enumerated The answers and arguments to be found in the great books are always weighty and significant and are usually a fair sampling of the best human thought on the subject but they never exhaust the possibilities of thought Secondly it is seldom possible for the Introductions within the limits of a short essay to examine even all the answers and arguments in the great books and even if some selection can be justified on the ground that it chooses the most significant opinions or the principal arguments it still remains a selection Finally even those positions and arguments selected for examination and summary may not all be viewed with an equally open mind or presented in an equally favorable light Perfect dialectical objectivity is not guaranteed by avoiding explicit judgments on the truth of conflicting opinions Partiality can intrude itself in a variety of subtler ways—by the manner in which arguments are summarized by shades of emphasis and neglect by the tone of a question or the color of a passing remark and by the order in which the various positions are presented

In order to avoid some of these faults or at least to minimize their impairment of dialectical objectivity the Introductions resort to an obvious device and use it as much as possible They report the opinion or argument of an author in his own language substituting quotation for summary Quotations may of course be wrenched out of context and their sense may be falsified by the way in which they are quoted But since each introductory essay is associated with references to the great books citing fully all the passages from which the quotations are taken (and many more besides which provide the rest of the context) the reader of the Introductions is protected against such discrepancies as may occur This device of quotation provides the Introductions with a safeguard against the greater danger of summarization In addition it gives them the flavor of the great conversation itself It offers the reader a sample of the wealth of material cited in the References

Only the writer s firm intention to avoid them can be relied on to prevent other sorts of defection from dialectical objectivity Dialectical objectivity demands a deliberate effort to balance question against question to forego any comment that might be prejudicial to check any tendency toward over or under emphasis The reader can judge for himself the extent to which such effort has been successful in the writing of th Introductions On all these counts the measure of dialectical objectivity achieved should be evident But the reader cannot easily judge its achievement on the one remaining count—the order of discus ion in the Introductions

For example many Introductions end with the exposition of a particular author s theory of a controversial subject and sometimes with a quotation unaccompanied by comment Does this signify approval of the author s position on the question? In presenting a number of conflicting positions the Introductions must necessarily expound them in some order Does the theory coming last in the series have the favored place or does the first? The assumption behind these questions (which arise naturally enough) is that the writer of the Introductions may have intellectual convictions which influence his ordering of the discussion even though he does not allow himself to express them explicitly in the form of judgments about what is true or false

That assumption is partly correct No mature mind can be without convictions But they do not necessarily constitute an insuperable obstacle to maintaining the dialectical detachment sought for in the Introductions If the writer can refrain from expressing his own judgment about what is true and false he can also though perhaps with more difficulty exercise sufficient caution to prevent his convictions from influencing the order in which he treats a variety of opinions one of which he may hold as his own He can do this by making certain that the views he himself favors do not uniformly occupy the same place in the order of discussion—whether that be first or last

A deliberate effort was made to avoid uniformity in the order of treatment The result of this attempt cannot be judged by examining a single Introduction but by taking the 102 Introductions as a whole the reader can observe whether uniformity has been avoided

The reader s final judgment on the attainment of their dialectical aim can be made in terms of a test much more relevant than any examination of details of method or order in the Introductions If a dialectical balance has been preserved the reader should be left with the major questions to answer for himself He should be left with the major issues unresolved unless he has resolved them in his own mind If he has any opinion as to where the truth lies it should be his own formed by him in the light of his reading not pre formed for him in any way From the Introductions themselves he should derive only three types of opinion (1) that for each of the great ideas these are *some* of the questions or issues worth considering (2) that for each of the questions or issues mentioned these are *some* of the answers or solutions and (3) that some of the questions are so connected that answering one of them in a certain way partly determines how others must be answered

If the Introductions do more than this they overstep their dialectical limits for more than this would be to declare one answer true and another false But if they do this much neither more nor less then they neither exceed their bounds nor fall short of their mark And if with respect to the three types of opinion they do try to assert the Introductions win the reader s acceptance then they have for him as much dialectical truth as can be attained

IT SEEMS APPROPRIATE AT THIS POINT to say a word about the writing of the Introductions

They were written by the Editor in Chief of *The Great Ideas* In a few cases preliminary drafts of the essays were prepared by the General Editor Drafts of all the essays were read and criticized by the Editor in Chief of *Great Books of the Western World* by editors on the staff of the Syntopicon and by other persons who generously accepted the task of reading and commenting on them

The suggestions for revision from all these sources were collated to guide the writing of a final draft In this as in most collaborative efforts the final responsibility for accepting or rejecting suggestions rested with one person The Editor in Chief of *The Great Ideas* assumed that final responsibility of authorship To some degree then the Introductions as published bear the authority of a group of minds working in collaboration but they do not pretend to be that anomalous thing—a composite literary production

In their report of the traditional discussion of the great ideas the Introductions reflect their author s reading of the great books They also represent some knowledge of the books listed in the Additional Readings it should not be necessary to say that no one—certainly no one responsible for the content of the Introductions—has read all this literature As for the great books no one can claim to have read them all equally well or to have read all of them systematically and carefully for their relevance to each of the 102 great ideas That kind of reading was hardly feasible before the Syntopicon was constructed The Introductions were being written at the same time that the references to the great books were being compiled topic by topic idea after idea

One fact about the writing of the Introductions deserves repetition and emphasis They were conceived as parts of the Syntopicon and constructed in relation to the other parts especially the Outlines of Topics and the References According to this conception of their purpose they were written not for scholars or specialists but for the general reader—or more specifically for future readers of the great books

This last point calls attention to one of the difficulties faced in writing the Introductions They could have and would have been written quite differently had they been intended for an audience of persons already familiar with the great books Should such persons read the Introductions they may need to be reminded of this fact Some readers may have devoted considerable time to the study of a particular author or group of authors as measured by the depth of their own scholarship the Introductions may appear superficial or inadequate in the treatment of those authors Other readers as a result of their own scientific or philosophical work may hold certain of the theories discussed in the Introductions as measured by the complexity of their own speculative involvement the Introductions may appear to present imperfect or over simplified versions of these doctrines Such persons are asked to remember that the Introductions try to give some account of *all* not just a few of the authors of the great books and to present for each of the great ideas a dialectical treatment of conflicting opinions not a scholarly exposition of particular doctrines considered in isolation This they try to do in a manner suited to the layman not the specialist—for future readers of the great books not past masters of them

From the standpoint of the lay reader the Introductions may have defects of an opposite sort The effort to make them intelligible to a person who has not read the great books—or certainly not studied them—involved a constant struggle against space limitations It was often necessary to use certain technical words or phrases which have an established traditional meaning without bein able to explain their significance in readily understandable terms For example for brevity of reference it was often necessary to use such expressions as Kant s categorical imperative Hegel s Absolute Idea Spinoza s infinite modes Freud s repression Newton s evanescent quantity or Ptolemy s epicycles but it was not always possible at the point at which they were used to explain their meaning

When the Introductions are obscure or cryptic for this reason a remedy is available for the lay reader The language of the Introductions is keyed to that of the topics The reader can therefore go to the topic which contains the difficult word or phrase under it he will find references to the book in which that expres sion is amply explained by the author who made it part of his technical vocabu lary In some instances the difficult expression does not appear in the language of the topics but as used in the Introductions it may be associated with the name of a particular author The remedy is still to go to the References find the citations of that author s work and look there for its meaning

THE BREVITY OF THE INTRODUCTIONS makes them dependent upon a reading of the great books under the guidance of the topics and references for the amplifica tion of meanings This is also true of many of the concepts and theories they deal with Brevity of treatment with or without quotations from authors will leave the reader in need of fuller explanation For the reader who is left perplexed by the Introductions the References provide a direct route to the better under standing he seeks

The brevity of the Introductions even helps to fulfill the primary purpose of the Syntopicon as a whole which is to serve as a stimulus and a guide to reading the great books Reading the Introductions can never be a substitute for reading the books The Introductions were designed to create and leave unsatisfied an appetite for understanding The quotations from the great books which they contain are always as the volume of the References indicates a small proportion of the quotable material The topics with which they deal at any length are always a small proportion of the topics under the Outline for each idea

The Introductions are thus at best intimations of the great conversation They are in short introductions and in addition to all their other aims they have a seductive aim which succeeds whenever the reader is prompted by perplexity doubt curiosity or wonder to go from the Introductions to the References and from them to the great books Since the Introductions usually employ the lan guage of the topics the reader is seldom left in doubt as to where he can find the additional material he seeks

There is one other deficiency in the Introductions which results from their brevity and it too has its remedy The interconnection of the great ideas is such

that sometimes the same points—the same problems issues concepts or theories —deserve treatment in the Introductions to more than one chapter Since the Introductions appear in the alphabetical order of the ideas each had to be written so that it could be read as an autonomous essay This consideration made desirable the repetition of certain matters in two or more Introductions but the amount of repetition was sharply limited by the requirement of brevity

In consequence certain matters highly relevant to the dialectic of a particular idea were reserved for treatment in the Introductions to other ideas Wherever this occurs the Introductions cite the other chapters in which these points are more amply treated Thus though any particular Introduction may be obscure because it does not fully explain all the notions or doctrines to which it alludes other Introductions provide the reader with a remedy

As for the great ideas so also for the Introductions to the chapters on them the alphabetical order conceals the intricate and highly significant pattern of their interdependence or co implication This order permits the reader to begin with any Introduction or to read any one without first having to read others But though the Introductions were designed for such use they were also written with an eye to the total pattern of the great ideas It is part of their aim to take the reader wherever he starts and lead him from one idea to another along paths that crisscrossing in all directions cover the whole circle of ideas

IV THE REFERENCES

THE REFERENCES WHICH FORM THE CENTRAL PART OF EACH CHAPTER are the heart of the Syntopicon More than either the Introductions or the Outlines of Topics the References represent a reading of the great books Quite literally each of the 163 000 references enumerated under the 2987 topics represents an examination of a book in whole or part for its relevance to the topic under which the reference is given

The reading necessary to record the 163 000 references could hardly be done by one man or even a small group of men within so short a time as seven years The great books could be read through once in that time but a first reading would obviously be inadequate to the task of discovering the contribution each makes to the thousands of themes which comprise the length and breadth of the great conversation Nor could the situation be very much improved simply by a second or third reading The *References represent a different type of reading*

To use a comparison which may help to explain the difference the ordinary reading of a great book is like photographing a richly complex scene taking it in as a whole by seeing the picture from a certain distance whereas the kind of read ing which produced the References is like a close up viewing one detail in that scene and making it stand out as clearly as possible As a photographic close up presupposes the picture of the whole as background so reading with a special focus presupposes the ordinary perspective in reading In terms of this analogy each of the 2987 topics is a special focus on the 443 works comprising *Great Books of the Western World* and in addition the 77 books of the Bible

It might almost be said that to produce the References this body of literature had to be read with a special focus as many times as a real difference in the topics required a change of focus At least that is the effect the References create for the user of the Syntopicon The references under each topic provide him with a special set of readings *in* the great books produced by reading *through* them with a particular theme or question in mind

The necessity of employing a fairly large staff of readers to create the references for a syntopical reading of the great books and the Bible combined with inevitable changes in personnel over a period of seven years raised the problem of achieving a unified result from the collaboration of so many minds If for example two readers understood the same topic differently they would not be reading the books from the same point of view when they selected passages to be cited in the references under that topic With a staff of thirty to forty readers the possibility and extent of such discrepancies were multiplied many times The difficulty of obtaining a unified result was aggravated by other circumstances such as the number of books which had to be read the different kinds of reading demanded by their variety and the number of topics which had to be considered in relation to one another

Just as the Introductions have unity because they were written by one person so ideally the References ought to have a comparable unity—as if so to speak all the reading they represent had been done by one man yet safeguarded against the blindnesses and biases of any individual mind by having that one reader consult with many others in order to weigh and verify his interpretation of the texts

Under the exigencies of time and in terms of inescapable human limitations the unity of the References could not be achieved in that way To explain how a sufficiently unified result was obtained from the collaboration of so many minds and to throw light on the problems faced in compiling the References it seems useful to relate briefly how the work was done

THE WORK OF COMPILING THE REFERENCES was accomplished in three distinct phases a preliminary or exploratory phase a middle period devoted to systematic reading and discussion and a final phase in which the references were critically reviewed and edited

At the beginning of the work the staff of readers cited books or passages for their relevance to one or more of the great ideas The list of ideas was still tentative and each idea was treated as a heading by itself without subdivision into topics Each member of the editorial staff was assigned a particular group of authors and was responsible for discovering their contribution to the discussion of all the ideas

The most important result of this initial exploratory phase was the realization of the need for a topical analysis of each of the main ideas The second and more systematic phase of the work began when the list of 102 ideas was finally determined and a topical analysis of each idea had been drafted In their first formulation the topics reflected the reading done in the previous period but they also

required that reading to be re done for the sake of testing the topics and im proving the references

In the concomitant development of the Outlines of Topics and the References refinements in syntopical analysis and syntopical reading had to keep pace with one another At each stage the topics directed the course of syntopical reading and syntopical reading tested the topics for their accuracy and adequacy as statements of the themes discussed in the great books Each stage involved a renewed examination of the books in the light of the topics and an adjustment of the topics to the discoveries of research Topics were discarded new ones were added topics were rephrased or merged with one another The next stage of reading had to respond to all the changes in topics caused by the previous stage This meant a systematic examination of the references which had been assembled at the previous stage and a continuing search for new references to ensure an adequate treatment of the books under the topics as then formulated

It was crucial to the idea of the Syntopicon that the editorial staff share a com mon understanding of the topics and the books But the division of labor which had been adopted tended to make the individual reader a specialist in handling a particular group of authors and works Each member of the editorial staff developed special knowledge of certain books special skill in reading them syn topically and special articulateness in calling attention to the problems raised by his authors and books

Regular staff conferences were instituted to overcome the disadvantages of such specialization as well as to take advantage of its benefits Conducted by the Editor in Chief with assistance from the General Editor the conferences aimed to produce a community of understanding by considering the meaning of each idea and its topics in relation to the content of the great books as a whole They also provided an opportunity for individual staff members to criticize the Out lines of Topics from the vantage point of a concentrated syntopical reading of a few assigned authors and to suggest changes in the topics to accommodate the thought or language of those authors

The proposed changes had to be considered by other staff members for their effect upon the syntopical treatment of other authors Any change that was finally adopted had consequences for the work of the entire staff It was the task of the *Editor in Chief to harmonize the* different often conflicting demands made on the developing structure of the Syntopicon by the content and intellectual style of particular authors and to balance the special interests urged by individ ual staff members against the general aim of making the Syntopicon reflect the content of the great books as a whole [6]

T ma tai th t dy fl w f w k, k p ra d f w k d and ha g m d d t mak thes re d cu tly ailable f in pe t by th ed al taff was orm l cal d taki g *Th r t f thes* l bors ca best be d ca ed by th f t that d g th mai ph se f the w k th l l taff d d t ppo t d th ed t ial ff t w tw th times l g th th ed t l t ff F th m h t ks b pe f m d w mply l cal h y l d d bl d rst d g f th m ial be g ha dled W t t f th t llige t dir ti d g la t perv f all h w k by h E ti Ed th Assist t Ed t rs Ed t ri l Assista ts d S pervisors rs m d transm tting th mat ials from ne t g t th m ght h ia ed he tir ed t ri l ff t

The system of specialization during the first two phases of the work necessitated a complete re-examination of the references in order to achieve greater unity and coherence than could be attained simply through staff conferences To secure these results the final re-checking of the references had to be organized in a way radically different from the way in which the references had been originally accumulated and checked

Prior to the last phase of the work no one of the 102 chapters had as a whole been scrutinized in all details nor had any one person examined for the topics of each chapter all the references to the great books Where before each member of the editorial staff had been responsible for finding and judging passages in a small number of books in relation to all ideas and topics it was now necessary for some one person to be responsible for examining and judging all the passages cited in a single chapter In no other way could the coherence of the references under each topic be assured In no other way could a uniform standard of comprehensiveness and intelligibility be maintained for all the topics in a given chapter

Under the direction of the Editor in Chief the General Editor and the three Associate Editors undertook this final critical reading The 102 chapters were divided among them Each chapter was examined as a whole by one editor each of its topics was considered in relation to the whole range of the great books The problems raised by this study of whole chapters were discussed in general conferences at which decisions were reached for the resolution of difficulties The close collaboration of the five editors during this final phase of work was the nearest approach to the ideal of unity which the dimensions of the task permitted

Both the critical nature of the work during this last period and the character of the editorial conferences required an articulation of general policies together with an explicit recognition of the discretion needed in applying them It is therefore possible to give in the rest of this discussion of the References an account of the principles which governed their compilation and may guide their sustained use

THREE GENERAL PRINCIPLES CONTROLLED the compilation of the References They can be stated as criteria for the acceptability of references proposed for each topic and even for the tenability of the topic itself in the light of those references

The first principle was the criterion of *relevance* The acceptability of any reference under a particular topic depended upon its relevance to the meaning of that topic This principle though simple in itself was extremely complex in application because of the many types and degrees of relevance which topical headings make possible Some indication of this can be given by an enumeration of the main types of relevance A book or passage was judged relevant to a particular topic if it

—expounded one or more of the points made in the topic
—analyzed the meaning of the topic
—explained the significance of the topic
—affirmed one or more of the propositions implied by the topic

—denied one or more of the propositions implied by the topic

—questioned doubted challenged or suspended judgment on one or more of the propositions implied by the topic

—assumed one or more of the propositions implied by the topic in order to develop the consequences of such assumption

—interpreted the meaning of the topic in relation to other matters not stated in the topic such as its presuppositions or implications

—exemplified the topic by providing illustrative instances from poetry history or science

—illuminated the topic by taking it as a point of departure for discussing related matters

—satirized the topic or those who discuss its meaning seriously

These types of relevance are not mutually exclusive For example a particular passage may analyze the meaning of the topic as well as affirm or deny one or more of the propositions it implies Furthermore not only do these various types of relevance have unequal weight but also within each type passages differ in the degree of their relevance to a particular topic Hence the judgment of a reference in terms of relevance involved more than a determination that it was or was not relevant in one of the ways enumerated

The book or passage in question had to be judged for the degree of its relevance in itself and by comparison with other relevant materials There was no exact measure for the minimum degree of admissible relevance The judgment was finally made in terms of the character of the particular topic and in the light of all the other references under consideration References were often rejected for negligible relevance as well as for irrelevance The references now remaining [illegible] each topic are there because they were finally judged to be substantially [illegible]

The second principle was the criterion of *coherence* As we have already [illegible] in considering the construction of the topics a normal topic tends to [illegible] matic ambiguity that is a number of related meanings Systematic [illegible] a middle ground between absolute univocation or unity of meaning [illegible] equivocation or multiplicity of meanings The few topics with [illegible] meaning raised no problem since a reference was either [illegible] meaning or not relevant at all The problem of coherence [illegible]

The coherence of the references under a particular [illegible] being relevant not to the *same* meaning in all cases but to [illegible] example two passages each of which may be relevant in [illegible] the meaning of the topic become incoherent if the [illegible] the topic are utterly unrelated to one another Strictly [illegible] passages but the topic which becomes incoherent if it [illegible] construe it as having a number of *unrelated* meanings

The principle of coherence was therefore an [illegible] relevance It required that the topic read in the light [illegible]

should if it had many meanings always remain systematically ambiguous and never pass into the sheer equivocation produced by unrelated meanings It also required that a common thread of meaning should run through all passages referred to under a particular topic, making each passage relevant to the others as well as to the topic itself This did not mean of course that all passages would be mutually relevant either to the same degree or in the same way just as the principle of relevance did not demand the same type or degree of relevance to the topic of all passages placed under it

The remedy for incoherence was to reject certain references which did not fit with others under the same topic If there were two sets of references which did not form a coherent whole one set had to be rejected

In some instances the troublesome references constituted a small proportion of the whole collection and the problem was easily solved by rejecting these and retaining the rest But in other instances the sets of passages which did not fit together were about equal in number and importance or at least each set was sufficiently numerous and important to deserve retention In these cases the usual solution was to formulate a new topic under which one set could more properly be placed leaving the others under the original topic which then became coherent through the removal of the first set Sometimes two new topics were formulated to replace one which had collected several mutually incoherent sets of references

The principle of coherence automatically prevented topics from dividing into two or more sets of completely incoherent references but it left to judgment the degree of coherence required to maintain the unity of a given topic involving a number of related meanings The result of these judgments should be that all references found under any topic not only fit the topic but fit together under it and have to some degree the unity of a common subject matter of discussion

The third principle was the criterion of *sufficiency* This applied to topics not to individual references In the final stage of work each topic had to be judged to determine whether its collection of references was sufficient to justify its retention

As the principles of relevance and coherence guided the editors in correcting errors of commission so the principle of sufficiency directed attention to errors of omission and caused a search for materials to supply the deficiency It was never possible of course to be certain that all errors of omission had been corrected Errors of commission were detectible in materials which could be thoroughly examined but to be sure that errors of omission had not been made in the treatment of a particular topic would have meant on each occasion of doubt the reexamination of 443 separate works and 77 books of the Bible

Hence the judgment as to the adequacy of a given set of references always involved doubt It is certainly not claimed for the references under the 3000 topics that they constitute a *full* collection of the relevant passages in the great books But the effort to check errors of omission was diligent enough to permit the claim that the references under each topic constitute an adequate representation of what the great books say on that subject

In terms of this standard the principle of sufficiency operated to question the retention of topics whose references judged to be an adequate collection did not seem to make a substantial contribution to the great conversation as a whole At various stages of work topics were rejected for insufficiency in content Those which remain meet the standard of sufficiency in two ways the references they subsume have been judged to be an adequate representation of the great books on that subject and as represented by these references what the great books have to say has been deemed of sufficient substance for consideration

THE APPLICATION OF THESE THREE CRITERIA was necessarily affected by the different kinds of topics under which the references were placed For example the standard of sufficiency could not be the same for a restricted doctrinal topic as for one designed to comprehend every variety of doctrine A topic restricted to the doctrine of a single author or a small group of authors was judged to have sufficient content if the references adequately represented that author or group

The principles of coherence and relevance did not operate in the same way for simple and complex topics In the case of complex topics involving two or more related points one passage might be relevant through its bearing on one of these points and another passage through its bearing on some other point Thus the coherence of all the references under a complex topic had to be judged differently from the coherence of those under a simple topic

Though the topical ideal was *comprehensiveness (which meant being open to* all sorts of books as well as every variety of doctrine) it was not always possible to formulate topics which had such comprehensive coverage As already indicated some topics were construed more narrowly and some more broadly some were restricted to discursive passages and some were open to both discursive and exemplary passages some were developed under a strict policy of referring only to passages right on the point and others were developed under a looser policy of referring to passages having a more remote relevance to the point perhaps even dealing with peripheral matters

According to these and other differences among the topics the three principles had to be differently applied as the exigencies of each topic demanded Relevant references were sometimes rejected because of the policy governing the construction of a particular topic The degree of coherence achieved in certain topics was much greater than that in others In general however it can be said that the more complex the topic or the more comprehensive the range of its references the more its references will vary in degree and type of relevance Less coherence was required for such topics than for more restricted ones

IN THE LIGHT OF THESE GENERAL PRINCIPLES qualified as they must be for different kinds of topics the following more particular points can now be made about the references assembled under any one topic

(1) *The order of the authors cited* Under each topic the references are arranged in the order of the volumes in the set This places the authors in a roughly chronological order In two respects this order deviates from strict chronology References to the Bible are always placed first in spite of the range of time covered by the books of the Old and New Testament To have placed these books in a more accurate chronological relation to the other books would have divided the references to the Bible into several distinct groups

The other reason for deviation from strict chronology is the association of two or more authors in the same volume For example the works of the three astronomers—Ptolemy Copernicus and Kepler—are published together in Volume 16 The position of this volume is determined by the date of Ptolemy the earliest of the three In consequence though Ptolemy is rightly placed after Tacitus (Volume 15) and before Plotinus (Volume 17) Copernicus and Kepler are made to appear in the list prior to Augustine and Aquinas who were chronologically their predecessors The association of Galen with Hippocrates in Volume 10 displaces Galen by many centuries Harvey is displaced by being combined with Gilbert and Galileo as is J S Mill by being combined with the authors of *The Federalist* These are the major exceptions to strict chronology For the most part the reader who follows the order of the references under a particular topic will be following the discussion in the order of its historical development

(2) *The order of the passages cited for a particular author* Normally a reference to the work of an author involves the citation of two or more distinct passages often quite a large number Each of these citations is a unit reference making up the whole complex reference The order of these unit references follows strictly the order of the pages in the volume to which reference is being made When several works by one author are included in one volume these works are arranged in chronological order wherever that can be done Hence if the complex reference to the works of a single author involves the citation of passages from several of his works these passages will usually be cited in the order in which they were written

For the reader the importance of this fact is negative The order in which passages are cited is *not* the order of their significance as contributions to the discussion of the particular topic When many passages are cited they are not all of equal substance Some are capital texts expressing the essence of the author's views on the subject Others are subordinate texts which add qualifications amplify or extend the major discussion or may be of quite peripheral significance

The reader cannot understand or assess the contribution of a particular author to a given topic until he has distinguished for himself the capital from the subordinate texts The order in which the various passages are cited does not help him to do this Their arrangement by pages rather than by importance was a practical necessity Knowledge of this warns the reader that the first passages to which the references direct him may not be—in fact they seldom are—the principal ones

(3) *Whole and part citations* References to a given work may be either to the whole work or to a part and part citations vary in length from a large section such as a book or chapter to a small passage consisting of a series of paragraphs or a single paragraph or even less In the case of scientific and philosophical writings whole works are very infrequently cited though large sections ranging from a whole book or chapter to a number of such divisions may often be referred to The citation of whole poetical or historical works is more frequent

The reason for this difference lies in the difference to be considered presently between the relevance of discursive or expository passages and that of narrative or exemplary passages In advance it need only be said that the primary relevance of a narrative work whether an epic or a dramatic poem a novel or a play usually consists in the exemplary significance of the whole narrative This is less true of historical than of fictional narratives Historical episodes occupying a few pages of an historical work are more frequently cited for their exemplary significance than are whole historical narratives whereas in the case of fictional or poetical narratives often nothing less than the whole story will make the point though here as with histories episodes may also be cited

In contrast for expository or discursive relevance it is seldom necessary to cite the whole of a scientific philosophical or theological work and even the citation of large parts is necessary less frequently than for historical and poetical works A short series of paragraphs a small paragraph or even a few compact sentences will often make the point adequately

Thus the amount of reading recommended by the references under a particular topic varies not only with the number of unit references contained under that topic but also with the number of whole works and large parts cited in pro portion to the number of relatively small passages It may be thought that the citation of whole works or even of large parts tends to defeat the purpose of the Syntopicon since no reader can reasonably be expected to read this much in the course of a syntopical reading of the great books in relation to a particular topic But the purpose for which whole works or large parts are cited does not require them to be read every time they are referred to

It is assumed that the reader will gradually acquire acquaintance with whole works and will then appreciate somewhat the significance of references to whole works or large parts without re reading Furthermore even prior to such ac quaintance with whole works these references inform the user of the Syntopicon of the range of literature relevant to a particular topic even if at the time they necessarily leave him in ignorance of some of the content

In other words the citation of whole works by title performs a useful function even if all the recommended reading cannot be done at one time The shorter passages cited can be read and will provide an indication of the content of a topic so that the user of the Syntopicon will have the background and the motivation for doing the more extensive reading that may have to be postponed Not to have cited whole works or large parts simply because of the extent of reading involved

would have resulted in a distorted and inadequate representation of the relevance of the great books to many topics

Several devices were used in constructing the references to help the reader in handling references to whole works or large parts

The first simply enables him to recognize at once whether a reference cites a whole work or a large part of it as a whole unit As indicated in the Explanation of Reference Style when the page numbers immediately follow the title of a work without separation by a comma the reference is to the work as a whole Similarly when a chapter or other part of a work is cited and the page numbers immediately follow without separation by a comma the reference is to that part as a whole The presence of the comma indicates that the reference is to some passage in the whole work or in one of its parts The absence of the comma notifies the reader that he is being referred to a whole work or to the whole of one of its parts

The second device is the use of the symbol *esp* which stands for especially Frequently the citation of a whole work or a large part is accompanied by a number of references to short passages within these wholes These references to smaller parts are preceded by the symbol *esp* This is done where it is feasible so that the reader without reading the whole can go immediately to the places where the author makes his point in compact form or most emphatically However the passages especially cited—even a long series of them—can never be taken as an adequate substitute for the whole

The third device serves a purpose quite opposite to that of the second It was not always possible to cite a number of short passages for special reference within a large whole This could be either because nothing less than the whole work was relevant to the topic or because the passages which showed the relevance of the whole were so numerous and so diffused throughout that an enumeration of them would be impracticable In the latter case the symbol *passim* was used to notify the reader that he could discover the relevance of the whole by beginning to read almost anywhere within its boundaries and by reading as much as seemed to suit his time and interest When the citation of a whole work or of a large part is unaccompanied by either *esp* or *passim* the reader is offered no alternative to reading the whole

(4) *The boundaries of the references* The problem of boundaries occurs only for references to passages which are less than a whole work or a whole part such as a whole chapter or section In the case of wholes the boundaries indicated in the references are of course the opening and closing pages But for any passage which is less than a recognizable part or section of the work the boundaries aim to give the user of the Syntopicon a unit of reading which combines maximum brevity with maximum intelligibility

Ideally the passage cited should begin at whatever paragraph or line the relevant material begins and it should end similarly with the paragraph or line after which the material ceases to be relevant The method of citing half pages for

volumes printed in a single column of type and quarter pages for volumes printed in a double column—described more fully in the Explanation of Reference Style—made it possible for the references to indicate the initial and terminal boundaries of a passage with some precision But to locate the beginning or end of a passage within a quarter or a half page still leaves a margin of uncertainty and so the reader must often exercise some judgment to decide precisely where the passage begins and ends The boundaries of the passage are given with absolute precision only where the reference includes line numbers In all other cases the boundaries are only approximately indicated

The Explanation of Reference Style explains how boundaries are shown by page numbers and sections and by author s divisions and line numbers The problem to be discussed here concerns the editorial effort to combine maximum brevity and maximum intelligibility in the determination of boundaries

These two aims were often in conflict there was always the risk of diminishing the intelligibility of the passage by narrowing its boundaries for the sake of brevity or compactness there was always the opposite danger of introducing diffuseness and even irrelevance by extending the boundaries for the sake of making sure that the passage would be adequately intelligible No rule could be formulated for effecting the compromise which would always *maximi e* both values In fact the determination of boundaries called for a different kind of judgment in referring to different authors and even to different works of the same author It was much easier for certain types of writing than for others—easiest perhaps for the mathematical and scientific works most difficult for the poetical and historical works especially in the citation of narrative passages having exemplary relevance

It cannot be expected that boundary problems were always perfectly solved In a certain proportion of the references the passages may be either too long or too short But even in these instances the margin of error is probably not very great—not enough to put the user of the Syntopicon to much trouble or inconvenience

(5) *Kinds of passages and kinds of books* We have already referred to the difference between the relevance of discursive or expository passages and the relevance of narrative or exemplary passages This is a distinction which divides all the references into two main groups No matter what the type or meaning of the topic under which it is cited every passage cited is relevant in one of these two ways It either discusses the topic or illustrates its meaning Sometimes the same passage does both though it usually is predominantly of one sort or the other

It might at first be thought that the great books would also divide into two groups—those providing expository and those providing exemplary passages To some extent this is true Since they are essentially discursive writing the great works of mathematics experimental science social science philosophy and theology naturally tend to yield references which have expository relevance—expounding explaining analyzing affirming denying doubting arguing The

great works of poetry or fiction of history and biography being narrative in form naturally tend to yield references which have exemplary or illustrative significance But there are important exceptions in both cases

The great narrative works whether poetical or historical contain essentially discursive passages The fictional or historical characters in the narrative think and speak about a vast number of the themes which constitute the topics of the 102 chapters Wherever in the course of a narrative men speak or think in an orderly sequence such speeches or trains of thought may have discursive relevance to one or more topics Furthermore in many of the great poetical and historical works the author speaks in his own person on themes germane to his narrative These passages are of course discursive and may have expository relevance

On the other hand the great discursive works of science philosophy and theology contain passages which are exemplary or illustrative in their significance These passages differ in one important respect from the illustrative materials in the poetical and historical works They are seldom if ever narrative in form For example a scientific treatise will contain descriptions of experiments performed a mathematical work will contain particular demonstrations and such passages may have exemplary or illustrative significance for a topic dealing with scientific theory or method

There are a few exceptions to the rule that expository or discursive works do not contain narrative passages which can be cited as exemplary The myths and stories told in the dialogues of Plato are certainly narrative in form But these passages almost always contain material which is implicitly if not explicitly discursive They are among the best instances of writing which seems to have both sorts of relevance to the same topic Other instances are passages containing descriptions of scientific experiments accompanied by theoretical comments of general significance

The Bible is unique perhaps in respect of the frequency with which its passages combine both sorts of relevance There are of course many purely narrative passages in the Old and the New Testaments as there are many which seem to contain preachment or precept exclusively But a very large number of biblical passages combines example with precept or parable with preachment It may even be said that the most famous and striking passages in the Bible transcend the distinction and have a type of significance or relevance uniquely their own

Nothing in the way a given reference is symbolized or recorded notifies the user of the Syntopicon which kind of passage is being cited In a few instances he may be able to guess what to expect from the nature of the work referred to If a narrative work is cited as a whole or even in any large part its significance for the topic will almost necessarily be exemplary rather than expository But if the passage cited is relatively small then even in a narrative work the passage may be either expository or exemplary In general this is also true of the citation of all or large parts of expository works Here as before relatively small passages may be of either sort Where no clue is provided by the general character of

the work being cited the user of the Syntopicon can discover the significance of the passage only by reading it

(6) *Series of references which have collective significance* It has already been pointed out that the references under a particular topic are unequal in their relevance to it References were sometimes rejected because their relevance was too remote or slight But sometimes an opposite policy was followed A reference which by itself might have been judged insubstantial or remote took on greater significance when read in the light of other references under the same topic In consequence it was retained both for what it added to the whole collection of references and for its own increased significance as a member of that collection

A collection of references possessing a certain unity through the inner relation of its members was most frequently constituted by a series of passages from the works of a single author But sometimes references to one author were judged in the light of references to others A given author s contribution to the discussion of a certain topic might be slight if taken by itself but it gained interest in relation to the utterances of others on the same topic and so otherwise slight passages were retained because of their value as members of the whole collection of references under that topic

This information about the way in which the references were often constructed to achieve a collective effect may help the user of the Syntopicon One who examines *all* the references under a topic will usually find that some of the authors cited are major and some minor contributors to the discussion He will also find that for a single author some passages referred to make a major and some a minor contribution

The person who has read through all the passages bearing on a topic will have little difficulty in discriminating between the major and the minor voices in the great conversation on that theme The elements of the collection will tend to assume their proper places and proportions But to one who is still in the process of reading the passages in the order in which they are cited the collective significance of the whole and of each part as a member of it will not be apparent

Such a person will encounter many passages whose content does not seem to justify their inclusion If he bears in mind that a passage may have more significance within the collection than it has alone he will suspend judgment on its worth until he has gone further in his reading under that topic Unless an error was made the questionable passage is there because it was judged that the reader would eventually ee more of interest in it than first meets the eye by re reading or remembering it in the light of other passages

The chapter on MAN contains a good example of a large collection of references which have more significance collectively than they do individually The topic reads Cultural differences among men Greek and barbarian Jew and gentile European and Asiatic Of the more than one hundred passages cited it can almo t be said that no single one by itself deals adequately with the subject of cultural differences among men or even with the specific cultural differences

mentioned But references to the Bible form a significant collection on the distinction of Jew and gentile and so do those to Gibbon The series of references to Herodotus Thucydides Plato Aristotle and Hippocrates forms a significant collection on the distinction of Greek and barbarian The references to Montesquieu and Hegel are significant on the distinction between European and Asiatic Some of the references to Hegel taken together with those to Darwin and Tolstoy form a collection which illuminates the subject of cultural differences in general Thus the whole set of references is adequate to the topic in a way that no single reference or small group of them is

A collection of references may also be used to achieve an intelligible rendering of the contribution of narrative works poetical or historical Where the whole narrative could not be cited it was often possible to select a series of episodes—particular scenes and events—which read successively would have the cumulative effect of illustrating the topic This is often the point of a long series of references to Herodotus Tacitus Plutarch and Gibbon or to Homer Virgil Dante Milton Tolstoy Dostoevsky and Melville

With discursive works there was less necessity for grouping references to achieve a cumulative effect But even here it was often true that only a certain number of the passages referred to had independent significance whereas others depended for part of their significance on the context provided by the collection However it should be added that for most of the great works of science philosophy and theology the number of passages which could be cited for their independent significance exceeded the number which could be cited only in the context of others

In the light of these considerations two general rules can be formulated to guide the reader in interpreting the materials recommended for his reading

1 The location of a passage under a topic reflects the judgment that it is relevant in some manner and degree to the subject in question but it does not indicate the kind of relevance or whether the relevance is dependent on other passages The reader must discover that for himself

2 To discover the significance of a particular passage the reader must consider it in relation

   a to the kind of book from which it is taken

   b to other passages from the same book or other books by the same author

   c to passages from other authors cited under the same topic with some attention to their chronological order and to the kinds of books written by the different authors being considered

   d to the collective significance of the whole set of references

One other observation should be added Very frequently the same passage is cited under different topics of one chapter as well as under the topics of different

chapters The user of the Syntopicon may meet the same passage many times as he goes from topic to topic or chapter to chapter A moment s reflection will discover the reason for this

A passage rich in content is naturally relevant to a large number of different topics and deserves as many different readings as are necessary to exhaust its meanings Each topic under which it is cited directs the user of the Syntopicon to read th passage in a different way—interpreting it in the light of that particular topic A previous reading of the passage in another connection will usually not suffice for an understanding of its relevance to the topic under which it now appears

This is particularly true of passages open to conflicting interpretations Such passages will appear in the same chapter under topics which express a conflict of theory or opinion and must be examined in the light of these topics if the reader wishes to discover how they are susceptible of such conflicting interpretations

WE MUST NOW CONSIDER A NUMBER OF EXCEPTIONS to the rules just stated The rules may guide the user of the Syntopicon in interpreting what he will normally find in the references but they do not take account of deviations from the norm Perhaps these deviations can be best described by enumerating the three kinds of special problems which arose in constructing the references (A) those caused by the special character of certain topics (B) those caused by the special character of certain books and (C) those caused by considerations of scholarship or by difficulties of interpretation

(A) PROBLEMS CAUSED BY THE SPECIAL CHARACTER OF CERTAIN TOPICS

(1) *The distinction and relation between supraordinate and subordinate topics* This distinction has already been sufficiently explained in the section of this Appendix dealing with the topics (see pg 1247) The supraordinate topic is a heading under which the subordinate topics logically fall as making particular points or as elaborating the meaning of the supraordinate But some supraordinates function *only* as logical headings for a number of subordinates whereas other supraordinates function also as topics *in their own right*

The supraordinates which are only headings have no references cited under them They are from the point of view of content empty All other supraordinate headings have references under them just as their subordinates do But because of their special character as supraordinate topics their reference content tends to differ from that of subordinate topics

Supraordinate topics were used to collect in one place all passages dealing in general terms with points treated in particular terms in the passages cited under the subordinate topics *or* they were used to list references to whole books or large parts of books while references under the subordinate topics cited shorter passages

These methods of developing a supraordinate topic were frequently combined When a supraordinate was developed according to either or both methods its references tend to cover the same ground as do those of all the subordinates together The supraordinate will refer to the most general or the most inclusive passages which are divided among the various subordinates Since the subordinate topics state particular points or cover parts of the whole subject indicated by the supraordinate they will contain many passages not cited under the supraordinate

The usual difference in reference content between a supraordinate topic and its subordinates is this the passages cited under the supraordinate cover without distinction all the points which are divided among the subordinate topics the passages cited under each of the subordinates were selected to distinguish the discussion of one of these points from that of others

One example may clarify the relation between supraordinate and subordinate topics In the chapter on LANGUAGE the Outline of Topics opens as follows

1 The nature and functions of language the speech of men and brutes

1a The role of language in thought

1b The service of language to society

2 Theories of the origin of language

2a The hypothesis of one natural language for all men

2b The genesis of conventional languages the origin of alphabets

The two subordinate topics (1a and 1b) make particular points generally covered by the first clause in the wording of supraordinate topic 1 Similarly in supraordinate topic 2 the two subordinates (2a and 2b) deal with particular aspects of the theory of the origin of language Accordingly the reference content of topics 1 and 2 will include much that will also be found under 1a and 1b 2a and 2b but without any discrimination of the particular points which their references provide

Some of the reference content of the supraordinates will not appear under either of the subordinates because certain passages are so general as to be relevant only to the supraordinate topics Similarly certain passages because particular in their significance have relevance only to the subordinates and appear only there

Topic 1 in the chapter on LANGUAGE happens to illustrate another point which holds true for a number of supraordinate topics Topic 1 is complex The part preceding the colon states the main theme the part following a subordinate theme The subordinate theme is itself a special point in the general discussion of the nature and functions of language Hence it is mainly the first part of topic 1 which functions as a supraordinate for topics 1a and 1b

The reference content of this complex supraordinate topic will therefore include besides those passages that belong in a supraordinate passages relevant to the narrower special point made in the part of the topic following the colon

These passages will not reappear under the subordinate topics unless they are relevant there for other reasons as for example a discussion of human and animal societies might deal in this connection with human speech and animal cries What is true of this complex supraordinate topic holds generally for all complex supraordinates which in part state general themes that cover the particular points made in the subordinate topics and also in part state particular themes of their own

One other kind of topic which is not strictly a supraordinate because it has no subordinates under it sometimes resembles the supraordinate topic in the range and character of its reference content That is the opening topic of a chapter which frequently stands alone For example in the chapter on CITIZEN the opening topic— The individual in relation to the state —has no subordinates neither does the opening topic in the chapter on CONSTITUTION— The difference between government by law and government by men the nature of constitutional government

Both of these opening topics have maximum generality for the range of discussion covered by the whole chapter In a sense therefore they can be regarded as logically supraordinate to all the topics which follow Accordingly such opening topics will include among their references many passages that will be cited again under later topics

In the light of the foregoing consideration of supraordinate topics the following recommendation is made to the user of the Syntopicon If he is interested in the *whole ground* covered by the supraordinate topic together with its subordinates he will generally find it profitable to examine first the passages cited under the supraordinate If however his interest is only in some particular point treated in one of the subordinates he can go directly to the passages cited under that topic He can supplement this later by turning to the broader materials referred to under the supraordinate or even perhaps by turning to the materials cited under other subordinate topics In general he should bear in mind that references listed under a supraordinate will more frequently cite whole books or longer selections therefrom than will references listed under the subordinates

(2) *Restricted or doctrinal topics* Ideally a topic should be phrased so as to comprehend every variety of relevant doctrine and include materials from every type of book. But as we have already observed (see pg 1239) a certain number of topics fall short of this ideal of comprehensiveness Either their wording restricted them to the doctrine of one particular author or a special group of authors or they were construed strictly rather than broadly so as to exclude certain types of material Usually the strictly construed topics excluded passages of exemplary rather than discursive relevance

These facts about *restricted topics are repeated here merely to advise the user* of the Syntopicon not to expect the same range of materials in the reference content of all topics For example he should not always expect to find exemplary passages along with expository ones though had the topic been construed less

strictly such passages might have been there because they are relevant Nor can he always expect to find all the passages with discursive relevance to a particular subject if its treatment has been divided among a number of separate doctrinal topics In such cases he must look to a whole group of related doctrinal topics to cover all the relevant authors and books

Even within a single topic different authors were sometimes treated differently because the special contribution of each could be most effectively handled in a somewhat different manner For example one author might be cited only for his major utterances on the subject whereas another might be represented by an almost complete collection of the passages from his works including those of minor as well as those of major relevance This was the result of a judgment that on the topic in question one author s complete position should be examined while for another author only that portion of his work which bears directly on the subject need be considered

One other special point deserves mention here though it does not belong to the problem of the restricted topic Certain topics as noted (see pg 1237) state comparisons contrasts distinctions or differences Ideally to be relevant to such a topic a passage should deal explicitly with the comparison etc But not all the references listed under such topics cite passages explicitly on this point Some deal explicitly with just one of the terms being compared and involve the other only by implication sometimes they do not consider the other term even by implication These passages are cited on the ground that the comparison proposed by the topic is to be found in the set of references as a whole if some passages deal with one and some with the other of the terms to be compared

In a few rare cases of topical comparisons or distinctions no passages could be found which made the comparison or distinction explicitly and yet the sense of the tradition on that point could be gathered from a series of passages dealing with one or the other of the two terms

(3) *Contrary or contradictory topics* Quite frequently a supraordinate topic states a problem or issue on which there are a number of opposed points of view the subordinate topics severally state the opposite views Sometimes a general subject of inquiry is announced by the supraordinate topic and its subordinates propose various theories of the matter contrary to one another in some way

Such sets of topics presented a special problem in constructing the references In the ordinary case in which a topic not only stated the issue but aimed to cover all controversial positions taken on it the set of references was developed to include both affirmations and negations of the point at issue or all sides of the controversy But when a number of topics explicitly set forth the controversial positions the reference content of each topic was restricted in the following way

Passages which expressed a view in any way contrary to the view stated in the topic were not cited on the ground that some other topic stating that contrary view was the proper place for the citation of the contrary position But if a particular author in developing his own theory explicitly commented on the position

of an adversary the passage containing that explicit commentary was judged relevant to both topics—the topic stating the view opposed by the author as well as the one stating his own view If however an author s expression of his own opinion constituted the denial of some other view *only by implication* the passage in which that author s opinion was expressed was cited only under the positive topic and not under the contrary one as well

A glance at the structure of the Outline for a particular chapter and a quick examination of the wording of its topics will tell the user of the Syntopicon in which way controversial issues were handled—whether by single topics covering all sides of the controversy or by separate topics representing opposing sides In the former case the reader can expect to find contrary views expressed in passages cited under a single topic in the latter he will find only affirmative opinions in the passages cited under each of a set of contrary topics and perhaps also explicit criticisms of each position by its adversaries

(B) PROBLEMS CAUSED BY THE SPECIAL CHARACTER OF CERTAIN BOOKS

(1) *The Bible* No other book in the western tradition has been subject to such extensive interpretation or to interpretation based on such incompatible principles as for example on the one hand the principles of higher criticism which treat the Bible as a secular document and on the other hand the principles of exegesis peculiar to a text considered to be the sacred and revealed word of God Let us deal with this second point at once since it is paramount for the significance of all references to the Bible

The Bible especially the Old Testament is to a certain extent an historical book It reports the events of Jewish history it describes the customs of the Jewish people and the gentiles with whom they came in contact it deals with the political and social institutions of the Jewish tribe the Jewish state and the kingdoms of Judah and Israel Biblical passages of an historical tenor were therefore found relevant to topics dealing with customs social practices and political institutions But citing them under such topics did not prejudge the issue whether the Bible is sacred writing or merely an historical record like any secular history

Those who in the light of their religious faith read the Bible as Sacred Scripture do not exclude the historical or literal sense as one mode of interpreting it On the contrary they usually insist that the literal or historical sense must be the basis of all other interpretations—allegorical anagogical and moral

Nor is the issue of the two approaches to the Bible prejudged by any other aspect of its treatment along with references to the works included in *Great Books of the Western World* No matter what the topic under which the Bible is cited the reader is always left quite free to decide that issue for himself He can always read a biblical passage *either* as a portion of divine revelation *or* as human writing no different from other human literature

This is true even when the Bible is cited under topics which explicitly state a religious position either one common to Judaism and Christianity or one exclusively Jewish or Christian The reader is still free to interpret the passage either as conveying the divine revelation of the religious dogma in question or as conveying the opinion of Moses or Isaiah of Matthew or Paul on the subject

Of course a passage will not have the same meaning when read as the revelation pertinent to an article of religious faith as when it is read as the merely human formulation of a religious tenet but then though perhaps to a lesser degree passages from other books have different meanings for the man of religious faith and for the man without it

A second problem concerning the Bible was that of choice among different and often conflicting interpretations of particular passages especially those whose meaning has been much disputed throughout the tradition of biblical commentary This problem was solved as was the first by *not choosing* between conflicting interpretations If a particular passage on one traditional interpretation was relevant to a certain topic it was cited there If by another traditional interpretation it was also relevant to another topic even one contrary in tenor to the first it was cited there also This permits the reader to consider both interpretations and judge between them

Since biblical exegesis is in a sense an endless process it may be asked what limits were set to placing diverse interpretations on a particular passage The answer is that the work of citing the Bible was governed in large part by well established traditional interpretations and where these were not available the judgment was nevertheless made in conformity with generally accepted standards of interpretation and by analogy with the interpretation of similar passages

Still another problem concerned Christian interpretations of Old Testament passages which do violence to the Jewish sense of their meaning Such passages were treated in the light of both interpretations Therefore, the user of the Syntopicon should not be surprised to find passages from the Old Testament cited under topics which state specifically Christian doctrines denied by the Jewish faith These references do not prejudge the theological issues between the two historic religions of the West Failure to cite these passages in their Christian as well as in their Jewish sense would have meant failure to present these issues so far as the Bible is concerned

Finally there was the somewhat parallel problem of conflicting interpretations within the Christian tradition itself as between the Roman Catholic and the Protestant interpretations In general the problem was solved in the same way as that of Jewish versus Christian interpretations of the same texts But this problem was complicated by the incorporation of the divergent interpretations in two English translations of the Bible—the Douay and the King James

Not only are some crucial passages quite differently rendered in the two versions but the books of the Bible itself are often differently named or numbered and differently ordered to one another Certain books which the Douay version treats as parts of the Old Testament the current King James translation treats as

Apocrypha Even within particular books the numbering of chapters and verses is frequently different

Hence it was necessary to refer to both the King James and the Douay versions whenever there was even the slightest variance between them (This complica tion in the mode of citation of biblical passages is more fully treated in the Explanation of Reference Style) To whatever extent the treatment of the Bible approaches adequacy the thousands of paired citations giving King James and Douay equivalents in book chapter and verse constitute a concordance between the Protestant and Roman Catholic renderings of the Bible

This method of citing the Bible according to both versions whenever they varied led to one difficulty for which there was finally no satisfactory solution In a small number of cases the wording of a passage in one version made it relevant to a topic to which it was not at all relevant according to the language of the other version Under such circumstances to cite the passage would be to prejudge for the reader the rightness of one version as against the other Avoidance of this meant omitting some few passages which readers of one version would know and think relevant to the topic under which it was not cited What was thought the less unsatisfactory of the two solutions was chosen The error of omission was judged less grievous than the violation of the Syntopicon s rule of dialectical objectivity which demanded most insistently to be followed in such cases of con flicting interpretation

Errors of omission of this sort were unavoidable But they were in the very nature of the case not the only errors of omission since it was never possible to be sure that all traditional interpretations of the Bible from whatever source had been taken into account much less all the possible interpretations to which biblical passages are subject Furthermore the references to the Bible will be judged by many critics of quite different persuasions to contain grave errors of commission—serious misinterpretations of difficult texts which in consequence have been assigned to topics where they do not belong

The decision to include references to the Bible along with those to the works published in *Great Books of the Western World* was made with all these risks in mind It seemed better to undertake this task whatever defects or errors would certainly remain in the finished work than not to have the voice of the Bible present in the great conversation More than half the authors in this set quote the Bible refer to it or write with the Bible in mind The Bible could not be omitted from the references under many topics to which it is relevant and wherein the other books assume its presence

(2) *The poetical and historical books* Next to the Bible the great narrative works of history and fiction presented the greatest difficulties What was done here may be the subject of much controversy It may be held that the meaning of poetry—and to a lesser extent of history—cannot be comprehended under ideas or topics It should be said in reply that it is not claimed that the meaning of a poem like the *Iliad* the *Divine Comedy* or *War and Peace* is exhausted by references

which cite it as relevant to the consideration of certain ideas and topics The same disclaimer applies to the histories of Herodotus Thucydides Tacitus and Gibbon and to the biographies of Plutarch

A brief statement of the theory governing the syntopical treatment of such works may indicate some of the difficulties and prevent some misunderstanding of what was done The controlling theoretical insight was that abstract and concrete universal and individual are everywhere correlated For example the fictional character and actions of Achilles in the *Iliad* are ideas in concrete or particular embodiment The historical episodes reported by Thucydides in the struggle between democracy and oligarchy in the Greek city states present individual instances of certain universal propositions in political theory Again many passages in his *History of the Peloponnesian War* concretely exemplify the problems of might and right in the relation of states to one another

A political theorist would state these issues abstractly and universally and would perhaps formulate general conclusions as to the consequences of trying to combine democracy with imperialism A poetical historian like Thucydides makes such points concretely by telling the tragic story of what happened to democratic imperialistic Athens

To say that the whole of the *Iliad* can be cited under a topic on the relation of men and gods or that particular scenes or episodes can be cited under topics dealing with honor or pride or love is not to say that the poetic meaning of the *Iliad* can be exhaustively comprehended by such references even if they were themselves exhaustive of its content so far as that is relevant to the ideas and topics of the Syntopicon

To say that the *History of the Peloponnesian War* can be cited as a whole under certain topics in the chapters on JUSTICE or LIBERTY and to say that particular events in it can be cited under topics dealing with treaties between states military strategy or political revolution is not to say that such references even if complete would exhaustively represent the content or significance of the *History*

But neither is it claimed that the references to the great scientific and philosophical works exhaust their content or meaning No more is claimed for any work of either kind—narrative or discursive—than that the references to it represent more or less adequately its contribution to the great conversation on as many themes as it may have relevance for So far there is no difference The difference lies simply in the mode of relevance What one kind of work says abstractly in terms of general propositions and universal concepts the other kind says concretely in terms of individual characters and particular actions or events

The whole theory of the references to fictional and historical narratives under ideas and topics rests on the logic of example Logically to exemplify is to present individual or particular instances of a universal concept or a general proposition To abstract or generalize is the logical opposite of exemplification it consists in stating the universal concept or general rule which applies to a particular case and embraces all similar particulars as well Without going further into the logic of universal and particular of abstract concept and concrete ex

perience let it suffice to say that the references in the Syntopicon which have discursive relevance move on the plane of the abstract and the general whereas the references which have exemplary relevance move on the plane of the concrete and the particular

The basic theory underlying the collocation of references to expository and narrative works under the same topics is simply that the two planes run parallel to one another They are at all points correlative expressions of the same thing They are as inseparable from one another and as indispensable to one another as human thought and human experience Nothing which can be grasped by the human mind on one plane is incapable of expression on the other in fact nothing can be grasped by the human mind on either plane without also being available to insight or experience on the other

Using this theory as a basis for the syntopical reading of the great poetical and historical narratives did not prevent or solve all difficulties in the treatment of particular works It is impossible to give a brief account of these difficulties since they were as various as the works themselves Each narrative seemed to raise problems of its own It should be reported for whatever guidance it gives the user of the Syntopicon that all problems were not solved with equal success

The references to Tolstoy s *War and Peace* for example seem to be a better indication of its exemplary relevance to the topics than those to Dostoevsky s *Brothers Karamazov* The same difference appears between Milton s *Paradise Lost* and Goethe s *Faust* or between Gibbon s *Decline and Fall of the Roman Empire* and the *Histories* and *Annals* of Tacitus These works may have presented unequal difficulties some may have yielded more readily to a syntopical reading than others The other alternative is that the syntopical reading of these works was not equally well or imaginatively done In any case reading the narrative works to discover their exemplary relevance to the topics was always a more difficult task than reading them for their discursive relevance

A word should be added here about this second type of reading to which the narrative works were submitted A speech by Pericles or Hamlet can have the same kind of relevance to a particular topic as a statement on it by a philosopher or a theologian The poetical and historical works are rich in discursive relevance to many topics especially those dealing with moral and political subjects and hardly less so with respect to metaphysical and theological themes

But one distinction must be kept in mind in considering references to the thought contained in narrative works The thought of Pericles or Hamlet is not the thought of Thucydides or Shakespeare at least not in the sense in which the discourse of Marcus Aurelius Montaigne Darwin Marx or William James expresses the thought of an author speaking in his own person Sometimes an historian or poet speaks in his own person as well as through his characters Thucydides does and so does Gibbon Fielding and Tolstoy are at some pains to distinguish their own reflections from the thoughts of their characters In other cases no such distinction can be found because the author did not make it In all the plays of Shakespeare there is no word from the poet himself as distinguished from the utterances of his characters

What Shakespeare himself has to say is said only by his plays and only through the exemplary significance of narrative of character and action In contrast Tolstoy speaks in two ways—in an exemplary fashion through narrative of character and action and discursively through the passages in which Tolstoy himself discourses on a variety of subjects In addition both Shakespeare and Tolstoy have much to say discursively through the speeches of their characters But this indirect mode of speech must always be distinguished from the author s own discourse and certainly from the totally non-discursive—that is the exemplary—significance of the poet s creation of plot and characters

This distinction applies to a certain number of works not ordinarily classed as poetry or history The dialogues of Plato constitute a striking exception to the rule that the scientific and philosophical authors speak in their own persons The thoughts and speeches of Callicles Gorgias Thrasymachus Alcibiades or even Socrates himself are not direct discourse by Plato

Because they have the poetical form of dramatic narratives the dialogues of Plato presented a very special problem In one sense they had to be treated like the plays of Shakespeare A particular speech by a character in the dialogues was cited like a particular speech by a character in the plays—for its discursive content and without any judgment as to whether it expressed the thought of the author or the very opposite But since there can be no question that Plato used the dialogues to express his own ideas it was also necessary to construct the references to the dialogues so that they represented Plato s own opinions as well as those of his characters

In many cases this could be done by following the line of thought in the speeches of that one character which Plato used as his *alter ego* This was usually Socrates but sometimes another as for example the Athenian Stranger in the *Laws* In other cases it had to be done either by citing a sequence of discursive passages in which Plato s own argument or theory becomes clear or even by citing a whole dialogue These last two methods of representing the thought of Plato resemble the method of representing Shakespeare s thought by citing a sequence of dramatic episodes or the narrative content of a whole play

But the difference in the treatment of Plato and Shakespeare is as important as the similarity Whereas the representation of Shakespeare s thought was achieved only through the exemplary significance of whole plays or narrative episodes therefrom the representation of Plato s thought was achieved mainly *throu h* the discursive significance of whole dialogues or analytical and argumentative passages therefrom However in a few cases a dialogue was cited for its narrative as well as for its expository significance as for example the *Apology* which tells the story of the trial of Socrates or the *Crito* and *Phaedo* which tell the story of his imprisonment and execution

Though the dialogues of Plato are the most striking exception to the rule in the treatment of philosophical and scientific works similar methods were sometimes employed in other cases For example the *Two New Sciences* of Galileo is written in dialogue form Here as with Plato the opinions of the characters in the

dialogue were sometimes cited even though they were plainly not expressing the opinion of Galileo

The scientific and philosophical treatises of Aristotle are partly historical They usually give an account of the thought of others as well as expound Aristotle s own ideas The references to Aristotle therefore include the citation of passages which report opinions with which Aristotle may disagree—for example those of Parmenides Democritus Anaxagoras or others This does not involve passing judgment on the reliability of Aristotle s report Aristotle s summary is often the main or only historical evidence on certain doctrines in antiquity Were such passages not cited the discussion of a number of topics would be less rounded than it is

In only one case is an author s report of the views of others not cited in isolation from his comments thereon That is the case of Aquinas Since the statement of the objections—the opinions of others—in the *Summa Theologica* is always accompanied by replies and each reply is paired with an objection the objections are never cited by themselves

(3) *The mathematical and scientific books* The above paragraphs deal with the treatment of the expository works of science philosophy and theology insofar as they presented problems like those presented by narrative works of poetry and history Furthermore we have already pointed out that particular demonstrations in mathematical treatises or descriptions of particular experiments in works of natural science were often cited for their illustrative significance under topics dealing with the theories or methods of mathematics and science Such references do not differ in mode of relevance from those to particular episodes in narrative books They exemplify the point of the topic under which they are cited

But the mathematical and scientific books presented one difficulty peculiarly their own For example certain propositions in Euclid s *Elements* are relevant to a topic in the chapter on QUANTITY which deals with the relations of solids and with inscribed and circumscribed spheres But these propositions are not intelligible apart from prior ones on the properties of the circle—propositions not strictly relevant to the topic in question These should not be cited here but under another topic in the chapter on QUANTITY which deals with circles

No completely satisfactory solution could be found for the problem raised by the order of propositions in a mathematical treatise On the one hand to cite only the relevant propositions under a particular topic and to omit reference to all the prior theorems on which their intelligibility depends makes it necessary for the reader to discover these prior theorems for himself if he wishes to understand the propositions cited On the other hand to cite under a particular topic not only the mathematical propositions directly relevant to it but also all the prior demonstrations on which they may depend for their intelligibility would almost always frustrate the user of the Syntopicon by making him begin his reading with propositions of no apparent relevance to the topic in question He might have to go through a long series of propositions before he came to those bearing directly on the topic

Of these two alternatives the first was chosen as slightly less unsatisfactory The user of the Syntopicon will at least see at once the relevance of the propositions cited and recognizing his failure to understand these propositions in isolation he can remedy his difficulty by finding their logical antecedents He needs only to know that in the order of mathematical exposition later propositions depend upon earlier ones for both their demonstration and their intelligibility

This is true not only of strictly mathematical treatises but also of all the great works in mathematical physics such as Galileo s *Two New Sciences* Newton s *Mathematical Principles of Natural Philosophy* Fourier s *Analytical Theory of Heat* and the astronomical treatises of Ptolemy Copernicus and Kepler For example in the chapter on ASTRONOMY there is a group of topics on the particular heavenly bodies One of these deals with the moon and its irregularities Under that topic Proposition 66 in Book I of Newton s *Principles* is directly relevant But in Newton s exposition Proposition 66 depends on at least thirty prior propositions According to the policy followed only the one relevant proposition was cited the others were omitted because they were irrelevant even thou h absolutely necessary to the understanding of Proposition 66

Spinoza s *Ethics* written *in ordine geometrico*—in the geometrical order—clearly indicates that this special problem is caused by the nature of mathematical demonstration Its subject matter is metaphysical and moral not mathematical but the *Ethics* presented the same problem as Euclid s *Elements* or Newton s *Principles* because it used an order of exposition in which propositions are logically related as prior and posterior The method employed in referring to a mathematical work was therefore used also for Spinoza s *Ethics* just as the method employed for Plato s dialogues was also applied to Galileo s References to Spinoza s *Ethics* cite particular propositions without citing all the prior propositions on which they depend

The problem of referring to propositions in works written in a mathematical manner is an aggravated form of the more general problem faced in treating all expository works scientific philosophical or theological as well as mathematical As already pointed out it was frequently necessary to cite a whole series of passages some major some subordinate in order to present an author s thought on a particular topic adequately The significance of many of these passages especially the minor ones depends on the context of the others and since passages are always cited according to the order in which they occur the user of the Syntopicon is often asked to read first something which gains significance only from materials to be read subsequently But there are two differences

In the case of works not written in a strictly deductive order the passages cited first in a series of references may depend for their significance upon materials which come later whereas in the mathematical or deductive order later propositions always depend on earlier ones In non mathematical works all the passages in a series have some relevance to the topic in their own right whereas in mathematical works the prior propositions are strictly not relevant at all

(C) SPECIAL PROBLEMS OF SCHOLARSHIP AND INTERPRETATION

(1) *The problem of translations* More than half of the works included in *Great Books of the Western World* are translations If translations were always faithful to the sense of the original language this would raise no problem But as every one knows they are not All translations are subject to suspicion and almost none ever satisfies all competent scholars

Scientific or philosophical works are generally better translated than poetic works Translations from modern languages such as Italian French and German are usually better than those from ancient languages and among the latter translations from Latin are usually superior to those from Greek It might almost be said that no Greek scholar is ever perfectly satisfied with an English rendering of Greek poetry or philosophy

Even if the translations from Greek published in this set were the best available it would still be true that certain passages clearly relevant to particular topics in their English rendering become less clearly relevant or even irrelevant when read in the Greek The members of the staff who did the syntopical reading of the Greek books discovered this again and again

They raised a difficult question Were they to cite the passage according to its significance in the original Greek or in the English translation? If whenever there was a variance between original and translation the interpretation of the passage and its topical allocation were to be determined by the Greek wording the user of the Syntopicon would find passages in the English translation omitted from topics to which they are relevant If on the other hand the wording of the translation was to be the standard the reader would find Homer or Aeschylus or Plato cited under topics to which according to some good scholarship they are not relevant

At first this appears to be a choice between errors of omission and errors of commission Actually it was a deeper problem involving a decision as to the purpose the Syntopicon could and should serve Since the Greek books were being published in English it would have been totally impractical to make the references depend upon the sense of the Greek By reading the passages cited in English the reader could not possibly discover why they were relevant to the topic and in addition he would find relevant passages which were not cited Since the purpose of the Syntopicon is to guide the reading of the great books as here published the only solution however unsatisfactory it may be in some respects was to base the interpretation and topical allocation of passages on their sense in English translation

This solution applies of course to translations from all foreign languages But it is less unsatisfactory for the others than for the Greek books It will not seem unsatisfactory in any case to the general reader with only English at his command Since he must become acquainted with the great books in translation the

Syntopicon serves him well by referring to them as if they were all written in English The scholar may regret the distortions and errors necessarily consequent upon this policy but he is in a position to correct such errors wherever he discovers them

([illegible]) *The problem of interpretation* Almost all of the great books contain passages which even when translated with absolute fidelity or when originally written in English are difficult to interpret—passages on which there has been much scholarly commentary and on which competent scholars have long disagreed The topical allocation of such a passage according to one theory of its meaning would inevitably evoke criticism from the scholars of an opposite school

The solution of this problem was in part like that of the special problem of biblical interpretation the same passage was cited under different topics according to divergent or even conflicting interpretations of it As in reading biblical texts well known traditional interpretations were consulted and often followed

Here the great books themselves were helpful Later authors comment on earlier ones The interpretation of one great author by another was frequently available and was often influential in the syntopical treatment of a particular passage Even when two or more among the great authors disagreed in interpreting one of their predecessors it was still possible to follow their divergent readings of the passage by placing it under as many different topics as were suggested by the diverse meanings they assigned to it

To whatever extent the method of multiple interpretation and allocation was successfully practiced the references even to extremely difficult passages avoided the necessity of choosing between conflicting theories of their meaning But it cannot be claimed that *all* the recorded interpretations of difficult texts were followed in allocating those passages—not all the interpretations to be found in the great books themselves were used much less all those which can be found in the voluminous literature of scholarly commentary on the great books Again the policy was determined by the primary purpose of the Syntopicon—to serve the general reader of the great books rather than the scholar

A large number of scholarly interpretations of difficult texts are highly specialized They often involve an elaborate theory of the whole work and beyond that of the mentality of the author For the Syntopicon to follow such interpretations would only bewilder the general reader He would find passages cited under topics to which their relevance could not be apparent because it depended on hidden principles of interpretation

The controlling principle therefore was to place passages only under topics where their relevance would become apparent to the general reader either when he read the passage carefully in the light of the topic or read it carefully in this light and also in the light of some or all of the other passages cited under that topic Scholarly interpretations which did not permit the references to conform to this rule had to be ignored

(3) *The problem of the validity of the great conversation* The compilation of the references under topics and ideas construes the authors as talking about the same themes and even as talking to one another about them In the latter sense the great conversation is admittedly in part a fiction since earlier authors cannot actually talk to later ones Nevertheless logically their remarks on a subject often function as comment on or even rejoinders to the remarks of their successors Though they are chronologically arranged the references under each topic do not form a straight line but a circle in which any point may be diametrically opposed to any other The great conversation does not move irreversibly from past to present it moves in a circle of thought which partly transcends time

The assumptions underlying the construction of the references to represent the great conversation have already been stated and defended in this essay But the issue they raise between the historical and dialectical treatment of ideas deserves further comment here

In its most extreme form the position of historical scholarship is that each of the great authors certainly the greatest among them somehow managed to create an intellectual world entirely his own—peopled by his own ideas walled in by the unique systematic ordering which he imposed upon them and rendered incommunicable with other worlds by his private vocabulary According to this extreme position to talk with or listen to one of the great authors on any of the great themes it is necessary to gain admittance to his world with the keys provided by historical scholarship The keys are available to anyone who will take the pains to acquire them—to anyone except the great authors themselves who having constructed their own worlds insist upon talking and being talked to each in his own In one sense they lock each other out in another sense each introduces the others into his own world but always recreates them in his own image

According to this view of the history of ideas a genuine dialectic of ideas is impossible and the notion of the great conversation is an imposture The references which collect the authors under the same topic and present them as relevant to one another as well as to the same theme does violence to the principles and method of their work by blindly ignoring the innermost secret of their individuality If the passages cited by the references had been properly interpreted each according to the special lights of its author they could not have been placed side by side in this way

The issue raised by the most extreme form of historical scholarship thus finally comes down to a question whether the passages cited in the references were rightly interpreted The question cannot be decided simply by reading the passages for even if they do *appear* to be relevant to one another and to the same topic the historical scholar who denies the great conversation can always insist that the *appearance* results from a superficial reading and that the *reality* discernible only by a deeper understanding of the texts on historical principles is quite otherwise

The issue is one of conflicting assumptions—or perhaps presumptions If it is presumptuous on the part of those who constructed the Syntopicon to stand outside the great authors in an effort to align them in a conversation and engage them in a dialectic which they themselves did not always explicitly recognize it may be no less presumptuous on the part of the extreme exponents of historical scholarship to isolate the great authors from one another imprisoning each in his own intellectual world

No doubt the kind of complete immersion in the work of a single author which the best scholarship often involves tends to impress one with the unique and incommensurable character of his thought But the contrary impression can be as readily formed by a dialectical reading of the books At its best it also involves complete immersion not in the work of one author but in the tradition which somehow embraces them all

Whether a final understanding of the great books would favor the intellectual isolation or communion of their authors—or both—is a question that must be left to any reader who feels competent to make that judgment The user of the Syntopicon need not make it while in the process of using the Syntopicon He need only know that the Syntopicon was constructed on dialectical principles not on the principles of historical scholarship in their most extreme form

He will then realize that the interpretation of the passages cited in the references was based on the assumption that the books can be read together and can be construed as mutually relevant under many topics if not under all Whatever his own final judgment he will be guided by the knowledge that the creators of the Syntopicon were committed to the policy of trying to see the authors as somehow more in communion than in isolation

The creators of the Syntopicon acknowledge taking a position on this ultimate issue of interpretation This does not mean that they were unaware of or undisturbed by the difficulties of applying their principles The preceding discussion of the construction of the references consists largely of a recital of difficulties and of the frequent necessity of choosing the less objectionable of two unsatisfactory solutions

The effort to achieve dialectical comprehensiveness by means of systematic ambiguity in the topics may sometimes have stretched equivocation to the breaking point In other cases the margin of equivocation permitted may have been misleadingly and unhelpfully great In still others the unity among the authors may have been a thin thread as compared with the bulk of their differences But all these risks were knowingly undertaken in the interest of showing that the great authors can be read as though in conversation on the same question or topic even when their positions and language are so disparate that more cautious scholars would hesitate to ascribe unity to the topic or coherence to the conversation

The scholars take another sort of risk which the creators of the Syntopicon were unwilling to assume—the risk of asserting that the topics discussed and the questions answered by one author are incommensurable with the topics and questions

considered by another As between the dialectical unity of the western mind and the historical isolation of its individual geniuses the true meaning of the intellectual tradition can be discovered only by taking risks of both sorts Justice must be done to each author as an individual and to his place in the tradition

Throughout the preceding discussion the aim has been to assess the virtues and defects of the References to indicate possible errors of omission and commission and their causes and to consider the problems of interpretation which could seldom be perfectly solved

But even if no errors of commission had been made and no mistakes in interpretation the References would not represent an adequate comprehension of the contribution of the great authors or the content of their books The References merely try to indicate what the books have to say on these topics They undoubtedly have much more to say than can be exhausted by even a complete allocation of their contents under the 3000 topics that were chosen

The fact that certain authors or books yielded more readily than others to the method of the Syntopicon certainly does not mean that the latter are less rich or meaningful because they are represented by fewer references These defects and discrepancies naturally resulted from the effort to treat the whole set of books—the whole tradition rather than individual authors and works—as the object of study Therefore syntopical reading of the great books as a whole may necessarily be a more or less inadequate reading of each individual book The one need not be substituted for the other nor should it be

There is also inadequacy in the reverse direction Even if no errors of omission had been made the References would not represent an adequate discussion of the topics To take them as such would be to assume that what the great books have to say on these subjects exhausts everything that can be said or even everything that has been said Many topics of great significance have references collected under them which do less than complete justice to the problems or issues they propose The Outlines of Topics frequently include questions or themes on which other books especially concerned with these subjects amplify and in some cases add often substantially to what the great books have to say Therefore to round out the discussion a list of Additional Readings at the end of each chapter supplements the References assembled in that chapter

V THE ADDITIONAL READINGS

The works recommended were chosen to supplement the works contained in *Great Books of the Western World* They were selected for each chapter to round out the discussion of the idea and topics to which the great books make the principal contribution

The Additional Readings far from exhaust all the writings which could be listed as relevant to a particular chapter More than relevance was required The books chosen for each chapter had to make a significant and substantial

Furthermore it was impossible to ask a large number of scholars to check all the 102 reading lists At most they could be asked to examine a small number of them Yet it was desirable to obtain a certain degree of consistency for all the lists Therefore some effort had to be made to see that the same principles of selection were applied uniformly to all 102 lists This was done by a small number of consultants who reviewed and revised the complete set of reading lists each consultant considering all lists from the standpoint of some particular type of book—such as poetical works historical works mathematical and scientific works philosophical and theological works

Finally neither the specialists who gave advice on books in particular fields nor the consultants who examined all the lists could be expected to understand fully the precise purpose the Additional Readings were intended to perform in the Syntopicon For this they would have had to study the Outlines of Topics and also to know the range of the references under each topic To make the Additional Readings supplement the References chapter by chapter it was necessary to know on what points and in what way the discussion of each idea and its topics needed to be amplified

Since work on the References was in process at the same time that the Additional Readings were being constructed such knowledge was neither available nor easily communicable The final judgment on the content of the Additional Readings had to be left therefore to the editors of *The Great Ideas* In the last two years of work on the Syntopicon they revised the lists which had been constructed and corrected during the preceding years They had to assume responsibility for whatever errors of omission or commission the lists contained

A FEW WORDS SHOULD BE ADDED HERE to account for what scholars and specialists are likely to regard as errors of omission or commission As the Syntopicon was designed primarily for use by the general reader so also were the Additional Readings Consequently certain things were intentionally omitted though their importance and relevance could be reasonably defended

In many fields there is a vast periodical literature of important essays articles research reports and monographs Such literature is generally not available to the general reader who is limited to what can be found in bookstores or in local public libraries and seldom has access to the great collections of a few university libraries or a few public libraries of national standing Furthermore the monographs and papers which appear in the learned journals are usually extremely technical and their contribution to the discussion of a subject is usually narrow and specific rather than broad and general For these reasons no periodical literature was included in the Additional Readings except in the few cases in which papers or essays first published in learned journals were later collected and published as books and then only if these papers were not too narrow in their significance

For similar reasons the effort was made to cite only books written in English or translated into English though here there were more exceptions to the rule

In every case the exceptions had to be justified on the ground that the untranslated work was of such crucial importance or such unique significance that the discussion of the subject would suffer substantially from its omission This is especially true of the literature of antiquity and the Middle Ages some of whose basic works are not yet translated

To the reader with no foreign language at his command the inclusion of these titles is a recommendation which is now only instructive but may become useful at some future date It can be hoped that works not yet translated at the time of publishing the Syntopicon will progressively become available in English

The same general policy was followed in the case of works out of print and not available in any except a few public or university libraries It seemed purposeless to recommend to the general reader titles he could not procure in some edition either at bookstores or public libraries Yet here as before a certain number of exceptions were made on the ground that the particular title was of extraordinary value Since such works may once again become available through the publication of new editions these recommendations may also have some future usefulness

The chief criticisms of errors of commission are likely to be directed by scholars against some of the contemporary works included in the reading lists *i e* mainly works published in the last five or ten years to a less extent all works published in this century

Except for Freud s later writings this set of great books contains no works published in the twentieth century The reason is not that no great books have been written in this century Rather it is that not enough time has yet elapsed to give anyone the necessary detachment and perspective to decide which contemporary books belong with the great books of the past The factor of recency is responsible for considerable controversy over which books of the nineteenth century deserve to be classified as great and it is generally much easier to get a judgment approaching unanimity concerning the great books of antiquity and the Middle Ages than those of modern times

For the same reason the contemporary works listed in the Additional Readings are more likely to be criticized than all the rest It is much more difficult to assess their contribution or estimate their importance accurately When a sound judgment can be formed about them some will certainly turn out to have been overestimated

At the risk of such errors of commission a deliberate effort was made to include in the reading lists as many contemporary books as possible This seemed desirable because *Great Books of the Western World* stops short of this century and also in order to give concrete evidence that all of the ideas and many of the themes of the great conversation are subjects of inquiry and discussion by the most active minds of our own day That some contemporary books are recommended which may ultimately be judged unworthy seemed on the whole less of a disservice to the user of the Syntopicon than would be the omission of these books In trying to include the most recent publications the Additional Readings in some chapters cite original works published as late as 1950

INVENTORY OF TERMS

The Inventory of Terms is designed to facilitate the use of the Syntopicon as a reference book. By means of the terms here listed in alphabetical order, it directs the reader to the relevant topics in the 102 chapters, and thus enables him to discover what the great books have to say on the 3000 topics which represent the themes of the great conversation. The titles of the 102 chapters are included in this alphabetical list because each of the great ideas is also a term in topics of chapters other than the one devoted to its consideration.

In order to see the particular topic in the context of related topics, the reader should turn first to the Outline of Topics in which the particular topic occurs. Immediately following the Inventory (p. 1346), a table lists the pages in Volumes I and II of *The Great Ideas* on which each Outline of Topics appears. The Outline of Topics in each chapter directs the reader to the pages of its Reference section where the particular topic is treated.

EACH TERM IN THE INVENTORY is accompanied by references to the chapters and topics in which it is a significant element. The terms are the words or phrases printed in bold face type. Whole chapters are cited by both chapter number and name, for example, *see* CH 4: ART. Individual topics are cited by the name of the chapter and the number of the topic in the Outline of Topics of that chapter, for example, *see* ART 5a.

In each entry, topics are cited in the alphabetical order of the chapters in which they appear. However, whole chapters cited always precede individual topics. In some entries the citations are divided into two groups, those of primary and those of secondary significance. The first group is separated from the second by a diagonal line.

SOME WORDS CARRY A QUALIFIER in parentheses to indicate the sense in which they are being used. For example, **Balance** (*phys*) stands for the term *balance* as used in physics; **Crisis** (*med*) stands for the term *crisis* as used in medicine. When the same word is used in two or more senses, qualifiers indicate the distinct terms it represents. For example, **Function** (*biol*) stands for the term *function* as it is used in biology, and **Function** (*math*) stands for the term *function* as it is used in mathematics.

Terms which are the names of particular sciences, such as logic or biology, may be related to topics which treat the nature of the science itself, or they may be related to topics concerned with the subject matter of that science. The words 'science of' or 'subject matter of' following words like logic and biology, indicate which sort of topic is being cited. For a small number of such words, the qualifying phrase is not needed to determine the meaning.

Phrases are sometimes necessary to express a single term or to make its meaning definite, for example, **Law of contradiction**, **Military strategy and tactics**. The same purpose is served by pairing related or similar words, for example, **Appearance and reality**, **Franchise or suffrage**, and **History, historian**.

FOR COMMENT ON THE USE of the Inventory of Terms, see the Preface (Vol. I, pp. xi–xx), and for the general principles and methods of its construction, see Appendix II (Vol. II, pp. 1225–1228).
